Fundamentals Of Computer Modeling For Polymer Processing:

Fundamentals of Computer Modeling for Polymer Processing Charles L. Tucker, Martin R. Barone, 1989-01-01

Modeling in Materials Processing Jonathan A. Dantzig, Charles L. Tucker, 2001-11-12 Mathematical modeling and computer simulation are useful tools for improving materials processing. While courses in materials processing have covered modeling, they have been devoted to one particular class of materials: polymers, metals, or ceramics. This text offers a new approach, presenting an integrated treatment of metallic and non-metallic materials. The authors show that a common base of knowledge, specifically the fundamentals of heat transfer and fluid mechanics, unifies these seemingly disparate areas. They emphasize understanding basic physical phenomena and knowing how to include them in a model. The book also includes selected numerical methods, a wealth of practical realistic examples, and homework exercises.

Computer Modeling for Polymer Processing Charles L. Tucker, 1989-01 **Process Modeling in Composites Manufacturing** Suresh G.

Advani, E. Murat Sozer, 2002-08-28 There is a wealth of literature on modeling and simulation of polymer composite manufacturing processes. However, existing books neglect to provide a systematic explanation of how to formulate and apply science-based models in polymer composite manufacturing processes. *Process Modeling in Composites Manufacturing*, Second Edition, provides tangible methods to optimize this process, and it remains a proven, powerful introduction to the basic principles of fluid mechanics and heat transfer. Includes tools to develop an experience base to aid in modeling a composite manufacturing process. Building on past developments, this new book updates the previous edition's coverage of process physics and the state of modeling in the field. Exploring research derived from experience, intuition, and trial and error, the authors illustrate a state-of-the-art understanding of mass, momentum, and energy transfer during composites processing. They introduce computer-based solutions using MATLAB code and flow simulation-based analysis, which complement closed-form solutions discussed in the book, to help readers understand the role of different material, geometric, and process parameters. This self-contained primer provides an introduction to modeling of composite manufacturing processes for anyone working in material science and engineering, industrial mechanical and chemical engineering. It introduces a scientific basis for manufacturing using solved example problems, which employ calculations provided in the book. End-of-chapter questions and problems, and fill-in-the-blanks sections, reinforce the content in order to develop the experience base of the manufacturing materials and design engineer or scientists, as well as seniors and first-year graduate students.

Modeling and Simulation in Polymers Purushottam D. Gujrati, Arkady I. Leonov, 2010-03-30 Filling a gap in the literature and all set to become the standard in this field, this monograph begins with a look at computational viscoelastic fluid mechanics and studies of turbulent flows of dilute polymer solutions. It then goes on to discuss simulations of nanocomposites, polymerization kinetics, computational approaches for polymers, and modeling polyelectrolytes. Further sections deal with tire optimization, irreversible phenomena in polymers, the hydrodynamics of artificial and bacterial flagella, as well as modeling and simulation.
