Soriano, 2007-05-26 Prior to the evolution of modern medicine with its superabundance of diagnostic and therapeutic medical technology and the rise of the litigious society the value of clinical skills was evident in both history taking and the physical examination Even today physicians can make a correct diagnosis solely by utilizing their clinical skills in about 90% of patient encounters Furthermore in the past physicians understood their role as a psychologist and were more apt to be familiar with the social context of their patients House calls were common The doctor was also a placebo who at his best inspired hope and probably sped recovery Geriatricians use both clinical skills and take advantage of modern technology sparingly for they know they are dealing with the most challenging and frail of patients older patients who so often present with multiple complex interacting behavioral social and physical problems In contrast to medicine for young people working with the older patient is much more demanding Furthermore the complex issue of societal attitudes toward old people can come into play especially the physician's need to deal with natural fears of aging dependency depression dementia and death Ageism is the enemy of effective medical treatment At its best geriatrics exemplifies ways that medical care for all ages can become more humane problem oriented and holistic **Government Reports Annual Index**, 1982 **The Journal of Nursing Education**, 1983 *Medical and Health Care Books and Serials in Print*, 1997 *Books in Print*, 1991 *Paperbound Books in Print 1995* Reed Reference Publishing, Reference Reed, 1995-12 *Subject Guide to Books in Print*, 1991 *Bowker's Medical Books in Print*, 1974 **Medical Books and Serials in Print**, 1984 *Geriatric Medicine*

C.K. Cassel, J.R. Walsh, 2012-12-06 With the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age. The broad scope of these volumes shapes a substantial answer to the question: What is geriatrics and why should we be interested in it? As I see it, there are at least five reasons. First, the scientific or intellectual reason: gerontology is the study of aging from the biologic, psychological, and social perspectives. There is increasing interest in the fascinating insights into the biologic mechanisms of aging: errors in protein synthesis, DNA repair mechanisms, alterations of the neuroendocrine system, changes in the immune system, genetic controls, and somatic mutations. Second, the demographic reason: this is the century of old age. There has been a 26-year gain in the average life expectancy. This gain compares with that acquired from 3 000 years B.C. (the Bronze Age) to the year 1900, which was about 29 years. Therefore, in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history. In 1830, one of three newborn infants survived beyond 60 years of age. *Fundamentals of Geriatric Medicine* Ronald D. Cape, 1983-01-01
