Procedural Blocks

always and initial

Most of the programming languages (e.g. C, Basic) are **sequential** in nature, or only one active process at any one time. However, hardware circuitry is **concurrent** in nature. All the circuitries are active in parallel.

Verilog supports parallelism by allowing any number of “**always**” and “**initial**” blocks. Each “**always**” and “**initial**” block run **concurrently**.

“**always**” and “**initial**” blocks are called **procedural blocks**. Assignment inside procedural blocks are called **procedural assignment**.
