Future For European Energy Security:

European Energy Security Palgrave Macmillan, 1986-02-01 **European Energy Security** Nataliya Esakova, 2013-01-24 Nataliya Esakova performs an analysis of the interdependencies and the nature of cooperation between energy producing consuming and transit countries focusing on the gas sector For the analysis the theoretical framework of the interdependence theory by Robert O Keohane and Joseph S Nye and the international regime theory are applied to the recent developments within the gas relationship between the European Union and Russia in the last decade The objective of the analysis is to determine whether a fundamental regime change in terms of international regime theory is taking place and if so which regime change explanation model in terms of interdependence theory is likely to apply **European Energy Security and US-Russian Competition** Ioanna Mavromati, 2025-10-31 This book argues that the influence of US Russian security competition on the energy policies of EU member states and on the development of a unified European energy security policy has been significantly underestimated While most previous studies have focused on internal EU dynamics and the role of Russian interests this work takes a broader perspective by examining how transatlantic rivalries have shaped European approaches to energy security By tracing the evolution of European energy security policy from the Cold War era through the present the book connects shifts in policy to the changing dynamics of US Soviet and later US Russian energy competition It demonstrates that after the Soviet Union's collapse the United States did not initially view European reliance on Russian energy as a threat However as US Russian competition intensified Washington increasingly framed Europe's dependence on Russian gas as a security risk and actively sought to block the expansion of Russian energy infrastructure into Europe The book also explores how despite the EU's early treaties being energy focused energy security only became a central foreign policy concern for the Union in the mid 2000s Ultimately the author argues that scholars of international relations must consider both great power dynamics and intra European factors to fully understand the development of European energy policy The book will be of interest to students and researchers in geopolitics international relations energy politics regional studies and European studies **European Energy Security** M. Biresselioglu, 2011-06-13 An exploration of Turkey's future role and impact on European energy security looking at the connection between geopolitics energy security and the EU's need for energy The book focuses on Turkey's foreign and energy policies and importance as a natural funnel through which the EU can access hydrocarbons and renewables *Renewed Focus on European Energy Security* United States. Congress. Senate. Committee on Foreign Relations. Subcommittee on European Affairs, 2014 **The EU-Russian Energy Dialogue** Pami Aalto, 2008 EU Russian energy dialogue represents a policy issue that forces us to take a serious look at several crucial questions related to the present and future of Europe This book not only outlines the overall characteristics of the energy dialogue but also illustrates the involved policy implementation challenges by paying special attention to the regional context of northern Europe **Investing in EU Energy Security** Henrik Bjørnebye, 2010-01-01 La

4e de couverture indique Since the introduction a quarter century ago of market based investments in the production of electricity and other critical services our awareness of the underlying issues affecting the supply and consumption of energy has changed radically No longer can Europe or any region rely on over capacity of electricity generation and inexpensive primary energy fuels or disregard the signs of potentially catastrophic climate change The author of this timely and sharply focused book shows that in the light of our current knowledge ensuring new investments and the right investments in electricity generation constitutes an urgent energy policy challenge facing the EU over the coming decades He accordingly makes the case for a serious reconsideration of the market facilitation and market intervention rules under electricity market legislation in the EU In the first detailed legal analysis of the EU s internal electricity market framework for investments in electricity generation facilities from the perspective of security of supply this book cover such legal issues as the following in precise detail applicability of the Treaty on the Functioning of the European Union TFEU security of supply as a ground for exemption on the basis of public security justifications of public intervention the applicability of EU State aid provisions to investments in energy security requirements imposed by EU law on Member States for ensuring cost efficient investments in European supply security facilitation of renewable energy sources and cogeneration in the environmental interest the Court of Justice s approach to Member State interventions the Court s decisions on restrictions on free movement in the environmental interest Member States right to launch tendering procedures for new generation capacity Member States right to impose public service obligations in the general economic interest on certain undertakings and relationship between the provisions of the TFEU and those of the Euratom Treaty in relation to investments in nuclear power generation Throughout the study in addition to his analysis of the decisions of the Court of Justice and the Court of First Instance the author takes into account legal literature and Union reports preparatory works and working papers The book demonstrates convincingly that today s energy supply challenges must be based on a broader balancing of security competitiveness and sustainability interests It suggests that the internal electricity market provisions of the Electricity Directive and the Security of Electricity Supply Directive would benefit from focusing more intensely on requiring investments in technologies and primary energy sources that will help mitigate climate change and reduce European energy import dependency and less on the need for ensuring cost efficient investments through market based means Through its detailed analysis of EU law in an area of great significance to both market participants and the public sector Investing in EU Energy Security will be welcomed by legal advisors whether working for the EU electricity industry or public agencies responsible for implementation of internal electricity market measures as well as by academics in this hugely important field of current research

The Southern Energy Corridor: Turkey's Role in European Energy Security Vedat Yorucu, Ozay Mehmet, 2017-10-03 This book highlights the importance of Turkey in diversifying supplies in future European energy security focusing in particular on the rapidly emerging southern energy corridor Turkey by its location occupies a key role in

this corridor fed by hydrocarbon supplies from Russian Caspian east Mediterranean and Arab sources The book examines Turkey's role as a transit country in addition to its own growing domestic energy market and it utilizes the latest evidence on the geopolitics of various pipelines which converge on Turkey The evidence including maps strongly favor Turkey as an energy hub within a regional energy model driven by rational behavior and market forces The book recommends an increasing strategic energy cooperation between the EU and Turkey to maximize mutual interest

European Energy Security Peter Truscott, 2009 Low-carbon Energy Security from a European Perspective Patrizia Lombardi, Max Gruenig, 2016-06-08 Low Carbon Energy Security from a European Perspective draws on the European Commission's funded project MILESECURE 2050 It considers low carbon energy security and energy geopolitics in Europe with a focus on four thematic clusters challenging the energy security paradigm climate change and energy security objectives the components of a secure and low carbon energy system energy security in a geopolitical perspective as it relates to economics resource competition and availability and the influence of large scale renewable energy projects on energy security and shifting geopolitical alliances An overarching narrative is that optimizing the energy system simultaneously across different objectives may be impossible i.e. lowest cost least environmental impact minimal downtime regional supply This book explores these charged topics through insights from a series of novel new energy project case studies and demonstrates the need for difficult political conversations within Europe and beyond by posing fundamental yet new questions about the energy security paradigm Offers a unique perspective on low carbon energy security by considering the assumptions behind current energy security needs Suggests the benefit of envisioning energy security through out of the box scenario development with respect to the energy system Includes energy in an international scenario with case studies from Africa Russia Ukraine Morocco China South America and Europe Draws on the European Commission's funded project MILESECURE 2050

EU Energy Security in the Gas Sector Filippas Proedrou, 2016-04-22 This book fills an important gap in the literature on energy security in the gas sector in the European Union Whilst the emphasis is often on energy security in the oil sector the gas sector has grown in importance in recent decades with increasing liberalization raising critical questions for the security of gas supplies The share of gas in Europe's energy mix is rising and the differences between the politics and economics of gas and oil supply are becoming more pronounced The author sheds light on the state of EU energy security in the gas sector its interdependence with external suppliers and the current gas strategy He examines the role of energy companies EU member states and EU institutions locates the main developments in the gas sector and focuses on the principal challenges posed by such fundamental changes The author scrutinizes the EU's relations with its main gas supplier Russia as well as with alternative suppliers elaborates on the key infrastructure projects on the table and their principal ramifications and discusses the main policies that member states pursue to achieve energy security as well as the EU's internal contradictions The book concludes with policy recommendations particularly in the light of tougher environmental

regulation **European Energy and Climate Security** Rossella Bardazzi, Maria Grazia Pazienza, Alberto Tonini, 2015-09-28
As energy is becoming one of the crucial concerns in the EU this volume provides an in depth analysis and interdisciplinary perspective on European energy security Given the multidimensional nature of energy security in terms of physical availability affordability and geopolitical security it brings together authors from different backgrounds pursuing a distinctly multidisciplinary approach The authors different perspectives correspond to the three sections of the book international relations which focuses on Eastern EU partners energy economics which highlights the current unconventional hydrocarbons revolution and its impact on EU energy and climate strategies and public policy which analyzes EU policies in the context

Energy Security and Climate Change Artur Gradziuk, Ernest Wyciszkiewicz, 2009 The Future of European Energy Security United States. Congress. Commission on Security and Cooperation in Europe, 2024 Energy Security and Natural Gas Markets in Europe Tim Boersma, 2015-08-27
Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe Research Handbook on EU Energy Law and Policy Rafael Leal-Arcas, 2024-09-06 This thoroughly revised second edition presents a comprehensive overview of the most important contemporary research in EU energy law and policy The Research Handbook brings together a diverse array of experts highlighting the multifaceted nature of this continually developing field **The South Caucasus - Security, Energy and Europeanization** Meliha B. Altunışık, Oktay F. Tanrısever, 2017-10-02 This book explores developments in the countries of the South Caucasus Armenia Azerbaijan and Georgia since the EU included the region in the European Neighbourhood Policy in 2003 It considers issues related to energy ethnic conflict steps towards regional integration and above all security including the involvement of Russia Iran Turkey and the United States It assesses the key importance of energy argues that the prospects for regional integration are weak and

contends that while the approach of Europe and the United States has been confused and weak not holding out great hope of EU or NATO membership Russia's interest and involvement in the region is strong and growing *Breaking Through* Wilfrid Greaves, P. Whitney Lackenbauer, 2021-02-02 This book examines what sovereignty and security mean in an Arctic region that is changing rapidly due to the intersection of globalization climate change and geopolitical competition **The Globalization of Energy** Mehdi Parvizi Amineh, Yang Guang, 2010-01-01 Energy security challenges are topping the policy agenda of the European Union and China Consequently policy makers of both energy import dependent polities continue to look for new responses But will these new policies put EU China relations in a cooperative or competitive setting

Analysing the Role of Energy Security in Promoting Third World Development John Alobwede Ngome, Every scholar who reads this book will concur that at the heart of John's analysis is rooted a fundamental question and preoccupation that although Cameroon is naturally endowed with abundant and diverse energy resources the country however remains an energy poor state due to the absence of a durable Energy Security Plan political vision and political will all of which continue to hamper the development of a range of renewables alongside various fossil fuels to improve and guarantee durable Energy Security to catalyze development and reverse the current energy crisis Prof Dr Amelia Hadfield Head of Department of Politics University of Surrey United Kingdom
