Future Of Piagetian Theory The Neo Piagetians:

The Future of Piagetian Theory L. Butler, L.C.R. Restaino-Baumann, V.L. Shulman, 2012-12-06 Until recently most books and articles on Piaget's theory whether laudatory or critical were written by psychologists or more rarely epistemologists who had had no direct contact with the research that provided the basis for the theoretical constructs nor with the ongoing work on the theory itself These authors who looked into the theory so to speak from the outside often noted aspects that were less visible to those working inside the theory and in this way raised a number of important questions However because most of these authors were psychologists they often overlooked the main thrust of Piaget's work which is epistemological Many complained about a gap between the theory and the experimental data as reported Such criticism may be justified at least in part if the theory is taken to be a psychological theory But Piaget himself always emphasized his epistemological orientation with this in view the methodology of the research and its links to the conceptual framework of the theory appear in a different guise The value of a given methodology depends on its contribution to the theory for which it was designed The gap between theory and experiment that was frequently criticized is in fact the gap between the psychological and the epistemic subject

Cognitive Development Sergio Morra, Camilla Gobbo, Zopito Marini, Ronald Sheese, 2012-12-06 Tying together almost four decades of neo Piagetian research Cognitive Development provides a unique critical analysis and a comparison of concepts across neo Piagetian theories Like Piaget neo Piagetian theorists take a constructivist approach to cognitive development are broad in scope and assume that cognitive development is divided into stages with qualitative differences Unlike Piaget however they define the increasing complexity of the stages in accordance with the child's information processing system rather than in terms of logical properties This volume illustrates these characteristics and evidences the exciting possibilities for neo Piagetian research to build connections both with other theoretical approaches such as dynamic systems and with other fields such as brain science The opening chapter provides a historical orientation including a critical distinction between the logical and the dialectical Piaget In subsequent chapters the major theories and experimental findings are reviewed including Pascual Leone's Theory of Constructive Operators Halford's structuralist theory Fischer's dynamic systems approach to skills Case's theory of Central Conceptual Structures Siegler's microgenetic approach and the proposals of Mounoud and Karmiloff Smith as well as the work of others including Demetriou and de Ribaupierre The interrelation of emotional and cognitive development is discussed extensively as is relevant non neo Piagetian research on information processing The application of neo Piagetian research to a variety of topics including children's problem solving psychometrics and education is highlighted The book concludes with the authors' views on possibilities for an integrated neo Piagetian approach to cognitive development

Developmental Psychology C.-A. Hauert, 1990-01-19 Since the end of the sixties Piagetian general theory with its inherent power of unification has gradually given way to a multitude of more specific models which is in evidence today In this volume the authors concentrate on three perspectives namely cognitive perceptuo motor and neuropsychological development and attempt to coordinate these traditionally separated views Good illustrations of these theoretical connections can be found in different chapters although the persistent isolation of these three domains still remains However the authors believe efforts in developmental psychology must continue in the direction of domain interaction for theoretical concepts as well as methodological tools

The Self in European and North American Culture J.H. Oosterwegel, R.A. Wicklund, 2012-12-06 How diverse or potentially overlapping are the numerous self models self theories and directions of self research It has become clear that the processes associated with the self are complex and diverse and that many of the approaches associated with the self have been pursued in isolation Moreover the fact of there being different traditions within developmental and social psychology as well as different traditions in Europe and North America has also led to a certain cacophony when we examine the self field as a whole The chapters here confront these differences trying to come to terms with phenomena that are overarching that extend through the dimensions of developmental psychology social psychology motivation psychology and parts of clinical psychology The book as whole gives a clear presentation of the issues questions and phenomena that surface in research fields known as self psychology

The Prince and the King Dr. Loris O. Gillin, 2016-05-10 What kind of people and society have we become With the twenty first century bearing witness to tremendous change much of which has been prompted by severe internal and global challenges to both the economy and the way we share information there is a need for a social and psychological counterbalance to place this change in perspective and stem the tide of disillusionment and fear The Prince and the King presents a birds eye view of the social forces and monumental changes that have delivered us into this twenty first century forces which drive us forward and mould us into the future Beginning with a behind the scenes look at the Second

World War and what happened during the post war years of development it also explores the sociocultural changes of the sixties and seventies and the issues of identity that faced those individuals during the eighties As these trends began to spread during the nineties the stage was set for some of the dramatic changes that now pose a challenge to individuals families and society today By focusing on the social development of individuals and communities we can be in a position to see how we have actually adjusted to this change The important task at hand however is to pause amidst this changing landscape and perhaps look at our Christian faith in order to consider if this is the psychological and spiritual place that individuals and societies should choose as their future
