Policy Integration for Complex Environmental Problems Helen Briassoulis, 2017-07-05 The quest for policy integration crystallized in the 1990s as awareness was growing that the current supply of narrow sectoral and little coordinated or even overlapping and conflicting policies could not cope efficiently and effectively with contemporary complex cross cutting and interdependent socio environmental problems Combining and coordinating policies properly promises to address this institutional misfit add value to policies support planning at national and sub national levels and facilitate the transition to sustainable development more generally This book proposes a comprehensive conceptualization of policy integration and negotiates pertinent theoretical methodological and applied issues from the perspective of selected EU policies rural development regional development transport social economic environmental water resources and biodiversity policy Mediterranean desertification an exceptionally complex socio environmental problem is used as an illustrative example as the idea for this book transpired while researching the topic of policy making to combat desertification in the context of MEDACTION an EU funded research project

Coastal Conservation and Management J. Pat Doody, 2012-12-06 Coastal Conservation and Management provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their management The book discusses all the main coastal habitats of importance for nature conservation saltmarsh shingle sand dune and seacliff as well as combinations of these habitats estuaries and other coastal wetlands It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient While these habitats have all been covered elsewhere in the literature no single volume gives such a wide ranging account An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem The principal issues are discussed and the key management options identified Some prescriptive suggestions are made though for the most part the reader is left to ponder the issues and their possible solutions

Linking People, Place, and Policy Stephen J. Walsh, Kelley A. Crews-Meyer, 2012-12-06 Linking People Place and Policy A GIScience Approach describes a breadth of research associated with the study of human environment interactions with particular emphasis on land use and land cover dynamics This book examines the social biophysical and geographical drivers of land use and land cover patterns and their dynamics which are interpreted within a policy relevant context Concepts tools and

techniques within Geographic Information Science serve as the unifying methodological framework in which landscapes in Thailand Ecuador Kenya Cambodia China Brazil Nepal and the United States are examined through analyses conducted using quantitative qualitative and image based techniques Linking People Place and Policy A GIScience Approach addresses a need for a comprehensive and rigorous treatment of GIScience for research and study within the context of human environment interactions The human dimensions research community land use and land cover change programs and human and landscape ecology communities among others are collectively viewing the landscape within a spatially explicit perspective where people are viewed as agents of landscape change that shape and are shaped by the landscape and where landscape form and function are assessed within a space time context This book articulates some of these challenges and opportunities

Planning for Coastline Change Gillian Cambers,1997 **Wildland Fire in Ecosystems** ,2005 **Integration of GIS and Remote Sensing** Victor Mesev,2008-03-11 In an age of unprecedented proliferation of data from disparate sources the urgency is to create efficient methodologies that can optimise data combinations and at the same time solve increasingly complex application problems Integration of GIS and Remote Sensing explores the tremendous potential that lies along the interface between GIS and remote sensing for activating interoperable databases and instigating information interchange It concentrates on the rigorous and meticulous aspects of analytical data matching and thematic compatibility the true roots of all branches of GIS remote sensing applications However closer harmonization is tempered by numerous technical and institutional issues including scale incompatibility measurement disparities and the inescapable notion that data from GIS and remote sensing essentially represent diametrically opposing conceptual views of reality The first part of the book defines and characterises GIS and remote sensing and presents the reader with an awareness of the many scale taxonomical and analytical problems when attempting integration The second part of the book moves on to demonstrate the benefits and costs of integration across a number of human and environmental applications This book is an invaluable reference for students and professionals dealing not only with GIS and remote sensing but also computer science civil engineering environmental science and urban planning within the academic governmental and commercial business sectors **Conserving Plant Genetic Diversity in Protected Areas** José María Iriondo,Nigel Maxted,Mohammad Ehsan Dulloo,2008-01-01 This book comprises 7 chapters discussing the genetic diversity conservation in protected areas and the management of wild relatives Some topics covered were genetic reserve management location and design plant population monitoring methods for in situ conservation of wild relatives habitat recovery and ex situ measures **The Zoological Record** ,2003 International Sheep and Wool Handbook D. Warren,J. R. French,2001-03-30 Habitat Conservation examines the relationship between habitat and ecosystem dynamics Over the last decade scientists have made advances in their understanding of this relationship and this has had major impacts on their approach to nature conservation management In many habitats conservation management needs to take into account the physical dynamic processes such as the impact of air soil and water as well as the biological processes Covering habitats ranging from mountains to floodplains to coastal dunes and rivers this text discusses how the biological and physical processes interact in each habitat explores the current and future impact of global warming and sea level rise and uses case studies to demonstrate how different habitats can be naturally managed and restored Written by geomorphologists hydrologists climatologists and limnologists this is a fundamental text for masters and undergraduate students studying nature conservation habitat ecology and environmental management It will also be essential reading for all conservationists environmental consultants managers and engineers
