*The Theory Of Social And Economic Organization* Max Weber, 2009-11-24 This book is an introduction to Max Weber's ambitious comparative study of the sociological and institutional foundations of the modern economic and social order. In this work originally published in German in 1920, Weber discusses the analytical methods of sociology and at the same time presents a devastating critique of prevailing sociological theory and of its universalist determinist underpinnings. None of Weber's other writings offers the reader such a grasp of his theories, none displays so clearly his erudition, the scope of his interests, and his analytical powers.

The Evolution of Economic and Innovation Systems Andreas Pyka, John Foster, 2015-03-03 This book is at the cutting edge of the ongoing neo-Schumpeterian research program that investigates how economic growth and its fluctuation can be understood as the outcome of a historical process of economic evolution. Much of modern evolutionary economics has relied upon biological analogy, especially about natural selection. Although this is valid and useful, evolutionary economists have increasingly begun to build their analytical representations of economic evolution on understandings derived from complex systems science. In this book, the fact that economic systems are necessarily complex adaptive systems is explored both theoretically and empirically in a range of contexts. Throughout, there is a primary focus upon the interconnected processes of innovation and entrepreneurship, which are the ultimate sources of all economic growth. Twenty-two chapters are provided by renowned experts in the related fields of evolutionary economics and the economics of innovation.

Economic Models and Algorithms for Distributed Systems Dirk Neumann, Mark Baker, Jörn Altmann, Omer F. Rana, 2010-02-13 Distributed computing paradigms for sharing resources such as Clouds, Grids, Peer-to-Peer systems, or voluntary computing are becoming increasingly popular. While there are some success stories such as PlanetLab, OneLab, BOINC, BitTorrent, and SETI@home, a widespread use of these technologies for business applications has not yet been achieved. In a business environment, mechanisms are needed to provide incentives to potential users for participating in such networks. These mechanisms may range from simple non-monetary access rights, monetary payments, to specific policies for sharing. Although a few models for a framework have been discussed in the general area of a Grid Economy, none of these models has yet been realised in practice. This book attempts to fill this gap by discussing the reasons for such limited take-up and exploring incentive mechanisms for resource sharing in distributed systems. The purpose of this book is to identify research challenges in successfully using and deploying resource sharing strategies in open source and commercial distributed systems.

**Social and Economic Networks** Matthew O. Jackson, 2008 Jackson also describes the varied statistical and modeling techniques used to analyze social networks.

Modeling Complexity in Economic and Social Systems Frank Schweitzer, 2002 Economics and the social sciences are in fact the hard sciences, as Herbert Simon argued, because the complexity of the problems dealt with cannot simply be reduced to analytically solvable models or decomposed into separate

subprocesses Nevertheless in recent years the emerging interdisciplinary sciences of complexity have provided new methods and tools for tackling these problems ranging from complex data analysis to sophisticated computer simulations In particular advanced methods developed in the natural sciences have recently also been applied to social and economic problems The twenty one chapters of this book reflect this modern development from various modeling perspectives such as agent based models evolutionary game theory reinforcement learning and neural network techniques time series analysis non equilibrium macroscopic dynamics and for a broad range of socio economic applications market dynamics technological evolution spatial dynamics and economic growth decision processes and agent societies They jointly demonstrate a shift of perspective in economics and the social sciences that is allowing a new outlook in this field to emerge

Human and Technological Progress Towards the Socio-Economic Paradigm of the Future Elena G. Popkova, Marina L. Alpidovskaya, 2020-08-24 This book explores the social consequences of digitization The authors determine the problems substantiate the perspectives and offer recommendations for determining the role of human in modern digital society The scientific concept homo digital is developed and the essence of its formation in the process of evolution of homo economicus is studied The transition from the post industrial to the information society is also considered The authors show that in the context of the digital economy the problem of economization commercialization of non economic non profit spheres and types of economic activity become more urgent they are analyzed through the prism of the theory of time in economics Based on this the increase of the influence of the consumer society on the modern social environment is shown The key role of human capital in formation of a new quality of economic growth in the digital economic environment is substantiated and transformation processes in the structure and practice of application of human capital are analyzed The idea of social justice is reconsidered through the prism of digital society as a social environment with equal opportunities but different competences and motives Attention is paid to the modern Russian practice of influence of the digital economy on society on the whole and each human Scientific and methodological recommendations for indicative evaluation of quality of economic growth in the conditions of digitization of Russia s economic system are offered and the specifics of the problem of socio economic differentiation of the Russian population in the conditions of technological progress are shown Based on this it is proved that the digital economy has a contradictory influence on society increasing the accessibility of goods and services in particular hi tech ones but also causing an urgent need for adapting to the new economic conditions This adaptation is largely determined by capabilities of people flexibility of their thinking and ability for learning and development Thus instead of the expected provision of balance of society its disproportions could grow in practice Also specific features of regional migration in modern Russia in the context of digitization are determined The role of emotional intellect in formation of the critical thinking of a company s employees is outlined Due to this it is shown that so called human factor which is traditionally treated as a source of economic risks and costs acquires a new role in the conditions of the digital economy a source of value creation and

reduction of risks of technological progress due to justified opposition to unfavorable changes Informal labor relations based on digital communications as the highest form of evolution of these relations that is achieved in the conditions of Industry 4 0 is considered The central role of higher education in the process of social adaptation to the conditions of Industry 4 0 is outlined The economic and legal issues of the digital economy are considered in particular the issue of democracy in the digital society in the conditions of e government *American Economic Life and the Means of Its Improvement* Rexford Guy Tugwell, Thomas Munro, Roy Emerson Stryker, 1925 The first edition of this book was privately printed and used in the spring of 1925 as a text for part of the course called An introduction to contemporary civilization in the Columbia college Pref
