Development Economics has been identified as a homogeneous body of theory since the 1950s concerned both with the study of development issues and with the shaping of more effective policies for less advanced economies Development Economics in the Twenty First Century brings together an international contributor team in order to explore the origins and evolution of development economics This book highlights the different elements of high development theory through a precise reconstruction of the different theoretical approaches that developed between the 1950s and the 1970s These include the theory of balanced and unbalanced growth theory the debate on international trade the concept of dualism dependency theory structuralism and the analysis of poverty and institutions The chapters highlight the relevance and usefulness of these analyses for the contemporary theoretical debate on development issues Comparative perspectives are explored and analysed including those of Keynes Hirschman Krugman and Stiglitz The chapters situate development economics within current debates among economists and historians of economic thought providing a platform for future research This book is suitable for researchers and students with an interest in Development Economics the History of Economic development and the Economics of Developing Countries

**Development Economics** John Knapp, 2018-02-06 Interest in the problems of underdeveloped economies has increased since the early 1950s and is now a primary topic in university courses. When this book was originally published it reflected a sense among some economists that current orthodox economic theory is inadequate in this field. The volume includes leading American and non American economists. The discussion of the content of courses was in the nature of things an extension of the discussion on the state of knowledge and reflects the period immediately prior to initial publication. Some of the issues continue to be debated including the balance of instruction between macro and micro economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages, political science, sociology or even engineering. Development economics is now an established subject in the teaching curricula of most universities. The attention of the volume is focused on the problems of creating courses of study in subjects relevant to development within some framework specially designed for the purpose. The problems of organizing such courses concerned the length of courses, the type of students to which they would cater, the qualifications and standards required for admission and successful completion of courses and so on. The balance of instruction between macro and micro economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages in connection with area studies, political science, sociology or even engineering, the merits of methods like case studies, workshops and training in field work are all discussed.
