**Ecosystem Function & Human Activities** R. David Simpson, Norman L. Christensen, 2012-12-06 R David Simpson Norman L Christensen Jr Human Activity and Ecosystem Function Reconciling Economics and Ecology Recognizing the need to improve social decision making on tradeoffs between economic growth and ecological health the Renewable Natural Resources Foundation convened a workshop in October 1995 on Human Activity and Ecosystem Function Reconciling Economics and Ecology While the subtitle perhaps reflected unrealistic expectations the presentations and discussions at the workshop were a preliminary step toward that reconciliation bringing together ecologists economists other natural and social scientists and policy makers to layout the issues articulate their needs and perspectives and identify common ground for further work This volume contains the papers presented and reports generated from the workshop We emphasize ecology and economics in this discussion We could argue that organizing our inquiry around these disciplines is only natural Ecology is the study of behavior of organisms within complex systems composed of a myriad of other organisms and their physical environments Increasingly this discipline has focused on how interactions among biological and physical components influence the overall functioning of ecosystems These components are increasingly being determined by human activities Ecosystem Function and Human Activities human activities Economics is the study of how we decide which of our needs and wants we choose to satisfy given our limited resources Handbook of Global Environmental Policy and Administration Dennis Soden, Brent R. Steel, 1999-07-16 Presenting case studies involving Rwanda Nepal Australia Japan and Mexico including real time policy and administrative questions this versatile reference text provides a wide perspective on national and international environmental problems and policies featuring discussions with a regional emphasis as well as global significance Pooling the work of over 60 international contributors in disciplines ranging from anthropology to political science the Handbook of Global Environmental Policy and Administration illustrates how environmental concerns are incorporated into administrative functions and policy processes *Handbook of Law and Economics* A. Mitchell Polinsky, Steven Shavell, 2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments **The Historical Ecology Handbook** Dave Egan, Evelyn A. Howell, 2005-08-12 A fundamental aspect of the work of ecosystem restoration is to rediscover the past and bring it into the present to determine what needs to be restored why it was lost and

how best to make it live again This handbook makes essential connections between past and future ecosystems bringing together leading experts to offer a much needed introduction to the field of historical ecology and its practical application by on the ground restorationists from publisher description

**The Economics of Everglades Restoration** Richard Weisskoff, 2005-01-01 The book provides valuable contributions on three related fronts It places past and current debates on ecosystem restoration of the Everglades in a clear systems context that acknowledges feedback between ecosystem quality and economic growth shows for the case of the Everglades that good intentions of providing generous financial support for restoration may lead to undesired effects that actually run counter to the original goal and demonstrates the use of regional modeling tools to develop consistent baseline forecasts and alternative scenarios Matthias Ruth University of Maryland College Park US The restoration of the Florida Everglades the largest ecosystem restoration project in the world is now underway Missing from the original plan however is a study of the region s cities and farms and the economic impact their growth will make on this already endangered ecosystem This book provides that analysis

Ecotoxicology, Ecological Risk Assessment and Multiple Stressors Gerassimos Arapis, Nadezhda Goncharova, Philippe Baveye, 2006-01-12 The science of ecotoxicology and the practice of ecological risk assessment are evolving rapidly Ecotoxicology as a subject area came into prominence in the 1960s after the publication of Rachel Carson s book on the impact of pesticides on the environment The rise of public and scientific concern for the effects of chemical pollutants on the environment in the 1960s and 1970s led to the development of the discipline of ecotoxicology a science that takes into account the effects of chemicals in the context of ecology Until the early 1980s in spite of public concern and interest among scientists the assessment of ecological risks associated with natural or synthetic pollutants was not considered a priority issue by most government However as the years passed a better understanding of the importance of ecotoxicology emerged and with it in some countries the progressive formalization of an ecological risk assessment process Ecological risk assessment is a conceptual tool for organizing and analyzing data and information to evaluate the likelihood that one or more stressors are causing or will cause adverse ecological effects Ecological risk assessment allows risk managers to consider available scientific information when selecting a course of action in addition to other factors that may affect their decision e g social legal political or economic Ecological risk assessment includes three phases problem formulation analysis and risk characterization

*Managing European Coasts* Jan E. Vermaat, Laurens Bouwer, Kerry Turner, W. Salomons, 2005-09-26 Coastal zones play a key role in Earth System functioning and form an edge for society providing a significant contribution to the life support systems Goods and services derived from

coastal systems depend strongly on multiple transboundary interactions with the land atmosphere open ocean and sea bottom Increasing demands on coastal resources driven by human habitation food security recreation and transportation accelerate the exploitation of the coastal landscape and water bodies Many coastal areas and human activities are subject to increasing risks from natural and man induced hazards such as flooding resulting from major changes in hydrology of river systems that has reached a global scale Changes in the hydrological cycle coupled with changes in land and water management alter fluxes of materials transmitted from river catchments to the coastal zone which have a major effect on coastal ecosystems The increasing complexity of underlying processes and forcing functions that drive changes on coastal systems are witnessed at a multiplicity of temporal and spatial scales      The Benefits of Climate Change Policies Analytical and Framework Issues OECD,2004-10-21 The Benefits of Climate Change Policies provides an overview of the state of the art in assessment of the global benefits of climate change policies      **The Measurement of Environmental and Resource Values** A. **Economics of Rural Land-Use Change** Kevin J. Boyle, 2017-03-02 Public concern over land management has never been greater This book provides a broad overview of the economics of rural land use change drawing attention to the meaningful role economic analysis can play in resolving public concern and supporting future pro active land management strategies in rural areas The book s breadth distinguishes it from other recent texts as it jointly offers rigorous treatments of theoretical and empirical models of rural land use change and practical discussions of applications and relevant methods Chapters are specifically designed to demonstrate the types of land use questions economic analysis can answer the types of methods that might be employed to answer these questions and the types of public policy decisions that may be supported by such analysis The book makes a significant contribution to contemporary land use research highlighting the key methodological and public policy issues that will be central to future research on the economics of rural land use change

*Sustainability in Agricultural and Rural Development* Gerard E. D'Souza, Tesfa G. Gebremedhin, 2019-05-23 First published in 1998 this book provides a broad but in depth description of the issues concepts methods of analysis and empirical results related to the sustainable development of agriculture and rural communities Specifically it examines the relationships between sustainability and individual topics such as technology information population gender land use community and public policy A unique aspect of this book is that the topics addressed have not previously been explored together in one publication With sustainability as the common link data and evidence are presented and then interpreted in light of individual perspective and experience in the process advancing our knowledge of this important field The book comprises of 12 chapters written by prominent authors who come from government and non government organizations as well as from various academic institutions and disciplines This book is ideal for a seminar course It is particularly intended for students in production agriculture rural sociology economics and public policy environmental sciences geography and land use planning and other social sciences Its rich insights make it a useful source of information for policy makers It can also be used as a reference by professional economists and other researchers interested in issues relating to sustainable agricultural and rural development While the coverage of some topics is by necessity more technical the book is compiled

with a general audience in mind Thus it should be of interest to anyone concerned with agriculture natural resources and rural issues particularly as they relate to the future of agriculture and of rural communities      *Development and Perspectives of Landscape Ecology* O. Bastian,Uta Steinhardt,2013-03-14 Development and status of landscape ecology subject of this book During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The roots of landscape ecology are geography and biology The term landscape ecology was first coined by the German scientist Carl Troll in 1939 nce the devel opment center of landscape ecology was in Central Europe Recently also other parts of the world became powernd centers of landscape ecology es pecially Northern America American approaches partly differ essentially from the European because they are focused esp on biogeography and population dynamics In Europe however the geographical roots of land scape ecology playamajor role Landscape is defined as a complex of abiotic biotic and human components Mainly due to linguistic barriers the international discussion does not take notice of approaches and experiences from non anglophone countries in a sufficient manner Therefore this book considers more the German and European views on landscape ecology than the books which were published before It tries to bridge the gaps between theory and practice of landscape ecology as well between the Ger manlEuropean and American approach es The book gives a fundamental representation of landscape ecology which proves to be a young but an interesting and very important transdisci plinary science for the solution of environmental problems Both the theo retical basis and practical application of landscape ecology are considered      *Why Environmental Policies Fail* Jan Laitos,2017-07-25 This book is for those who are not just interested in the ways humans have harmfully altered their environment but instead wish to learn why the many governmental policies in place to curb such behavior have been unsuccessful Since humans began to exploit natural resources for their own economic ends we have ignored a central principle nature and humans are not separate but are a unified interconnected system in which neither is superior to the other Policy must reflect this reality We failed to follow this principle in exploiting natural capital without expecting to pay any price and in hurriedly adopting environmental laws and policies that reflected how we wanted nature to work instead of how it does work This study relies on more accurate models for how nature works and humans behave These models suggest that environmental laws should be consistent with the laws of nature      Changing Prairie Landscapes Patrick Douaud,Todd A. Radenbaugh,2000 Landscapes of the Northern Great Plains have been constantly changing but never so rapidly as under modern conditions of economic affluence and technological development This change is multifaceted and has an impact not only on the fabric of culture and its perception of landscape but also on the ecology and physical landforms Multidisciplinary research has therefore become an important tool in identifying the influences that human activities have not only on cultural landscapes but on biophysical ones as well This collection of articles originating in a conference held at the Royal Saskatchewan Museum in April 2000 focuses on just such an integration of research concerning the Great Plains of North America and involving the disciplines of

geology archaeology biology geography sociology and agriculture      *Climate Change: Science, Strategies, and Solutions*  
Eileen Claussen, 2022-05-16 It is the greatest environmental challenge of the 21st Century But what do we truly know about global climate change And what can we do about it Most of the world's top scientists agree that emissions of carbon dioxide and other greenhouse gases from human activities such as industrial processes fossil fuel combustion and land use changes are causing the earth to get warmer Impacts of this warming may include damage to our coastal areas accelerated rates of species loss altered agricultural patterns and increased incidences of infectious diseases The effects of climate change and efforts to mitigate climate change could also have substantial economic ramifications The book presents the latest research and analysis from prominent scientists economists academics and policy makers including Tom Wigley and Joel Smith who along with other authors of the Science and Impacts chapter explain the basic science of climate change the growing evidence that human activities are changing our climate and the impacts of these changes Eileen Claussen John Gummer Henry Lee and other authors of the Global Strategies chapter who describe what nations are or are not doing to address climate change and the state of international climate talks Robert Stavins John Weyant Ev Ehrlich and other economists who explain why economic analyses of climate policy are conducted why the projected costs of addressing climate change vary so widely among economic models and how changes driven by today's economy can influence climate policy Gov Jean Shaheen and other authors of the Innovative Solutions chapter who describe what state and local governments in the United States and multinational companies are doing to monitor and curb greenhouse gas emissions and Forest Reinhardt who offers business leaders advice on steering their companies on a path that is healthy for business as well as the global climate This publication has also been published in paperback please click here for details

**Environmental Cleanup at Navy Facilities** National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Environmental Remediation at Naval Facilities, 2003-07-16 The number of hazardous waste sites across the United States has grown to approximately 217 000 with billions of cubic yards of soil sediment and groundwater plumes requiring remediation Sites contaminated with recalcitrant contaminants or with complex hydrogeological features have proved to be a significant challenge to cleanup on every level technologically financially legally and sociopolitically Like many federal agencies the Navy is a responsible party with a large liability in hazardous waste sites Environmental Cleanup at Navy Facilities applies the concepts of adaptive management to complex high risk hazardous waste sites that are typical of the military EPA and other responsible parties The report suggests ways to make forward progress at sites with recalcitrant contamination that have stalled prior to meeting cleanup goals This encompasses more rigorous data collection and analysis consideration of alternative treatment technologies and comprehensive long term stewardship

**CITES as a Tool for Sustainable Development** Marie-Claire Cordonier Segger, David Andrew Wardell, Alexandra Harrington, 2023-08-10 Saving endangered species presents a critical and increasingly pressing challenge for conservation and sustainability movements and is also

matter of survival and livelihoods for the world's poorest and vulnerable communities. In 1973, a global Convention on International Trade in Endangered Species (CITES) was adopted to stem the extinction of many species. In 2015, as part of the Sustainable Development Goals (SDG 15), the United Nations called for urgent action to protect endangered species and their natural habitats. This volume focuses on the legal implementation of CITES to achieve the global SDGs. Activating interdisciplinary analysis and case studies across jurisdictions, the contributors analyse the potential for CITES to promote more sustainable development, proposing international and national regulatory innovations for implementing CITES. They consider recent innovations and key intervention points along flora and fauna value chains, advancing coherent recommendations to strengthen CITES implementation, including through the regulation of trade in endangered species globally and locally.
