Economics of Poverty, Environment and Natural-Resource Use Rob B. Dellink, Arjan Ruijs, 2008-03-25 Reduction of poverty is a tremendous and persistent challenge for the global community Given that the livelihood of millions is at stake there is an urgent need to reconsider the causes of and the remedies for poverty Poverty and its reduction are closely linked to the natural resources base The quality and bounty of the local environment certainly affect living conditions of the poor and their poverty is often seen as a contributing factor to the degraded condition of the local environment Teasing apart the direction of causality in this resource poverty nexus is a serious empirical challenge This book contributes to an improved understanding of the economic dimensions of environmental and natural resource management and poverty alleviation The ten chapters of the book offer an overview of the current knowledge concerning the relation between poverty environment and natural resource use Three sides of the debate receive particular attention First the relation between resource use and poverty is discussed from a theoretical point of view Second it is questioned whether payments for environmental services or considering values of resources can be an effective tool for stimulating both sustainable resource use and poverty alleviation Third alternative strategies to break the land degradation poverty cycle are discussed *Economics of Natural Resource Development in the West* Western Agricultural Economics Research Council. Committee on the Economics of Natural Resources Development, 1973 *Sustainable Resource Use* Alex Smajgl, Silva Larson, 2012 The way that humans organize both resource access and resource use is vital to the management of natural resources Within different contexts institutional arrangements such as the rules of common and private property rights become levers by which human behaviours can be modified and steered towards the goals of sustainable natural resource management Featuring contributions from leading thinkers in the field this groundbreaking volume examines institutional dynamics from the perspective of natural resource management The book is organized into four parts The first discusses institutional diversity and contextual change Following this institutional misfit is analysed with a strong focus on the long term impacts of colonial structures in the Asia Pacific region The book then discusses experiences with institutional dynamics in order to ease the tension of such misfits before

examining future research needs Ultimately through careful argument and by deploying original research the authors make the case that institutional arrangements cannot be perceived as a set of parameters that can be optimized and locked in for the most efficient functioning of a system nor can institutions be evaluated outside the context in which they were developed This is powerful thought provoking and important reading for academics researchers policy makers and professionals in resource institutional and environmental economics and land use planning and policy across the full range of natural resource sectors from forestry to agriculture Published with CSIRO Cover image Blue Flower of Life c Theresa J Richardson 2006 Encyclopedia of Energy, Natural Resource, and Environmental Economics ,2013-03-29 Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government

Decoupling Natural Resource Use and Environmental Impacts from Economic Growth United Nations Environment Programme. International Resource Panel,2011 By 2050 humanity could devour an estimated 140 billion tons of minerals ores fossil fuels and biomass per year three times its current appetite unless the economic growth rate is decoupled from the rate of natural resource consumption Developed countries citizens consume an average of 16 tons of those four key resources per capita ranging up to 40 or more tons per person in some developed countries By comparison the average person in India today consumes four tons per year With the growth of both population and prosperity especially in developing countries the prospect of much higher resource consumption levels is far beyond what is likely sustainable if realised at all given finite world resources warns this report by UNEP s International Resource Panel Already the world is running out of cheap and high quality sources of some essential materials such as oil copper and gold the supplies of which in turn require ever rising volumes of fossil fuels and freshwater to produce Improving the rate of resource productivity doing more with less faster than the economic growth rate is the notion behind decoupling the panel says That goal however demands an urgent rethink of the links between resource use and economic prosperity buttressed by a massive investment in technological financial and social innovation to at least freeze per capita consumption in wealthy countries and help developing nations follow a more sustainable path *The Economics Of Environmental And Natural Resources Policy* J.
