*Trustworthiness in Mobile Cyber Physical Systems* Kyungtae Kang, Junggab Son, Hyo-Joong Suh, 2021-08-30 Computing and communication capabilities are increasingly embedded in diverse objects and structures in the physical environment They will link the cyberworld of computing and communications with the physical world These applications are called cyber physical systems CPS Obviously the increased involvement of real world entities leads to a greater demand for trustworthy systems Hence we use system trustworthiness here which can guarantee continuous service in the presence of internal errors or external attacks Mobile CPS MCPS is a prominent subcategory of CPS in which the physical component has no permanent location Mobile Internet devices already provide ubiquitous platforms for building novel MCPS applications The objective of this Special Issue is to contribute to research in modern future trustworthy MCPS including design modeling

simulation dependability and so on It is imperative to address the issues which are critical to their mobility report significant advances in the underlying science and discuss the challenges of development and implementation in various applications of MCPS

**Advanced Computing, Networking and Security** P. Santhi Thilagam, Alwyn Roshan Pais, K. Chandrasekaran, N. Balakrishnan, 2012-04-02 This book constitutes revised selected papers from the International Conference on Advanced Computing Networking and Security ADCONS 2011 held in Surathkal India in December 2011 The 73 papers included in this book were carefully reviewed and selected from 289 submissions The papers are organized in topical sections on distributed computing image processing pattern recognition applied algorithms wireless networking sensor networks network infrastructure cryptography Web security and application security

Combinatorial and Algorithmic Mathematics Baha Alzalg, 2024-08-01 This book provides an insightful and modern treatment of combinatorial and algorithmic mathematics with an elegant transition from mathematical foundations to optimization It is designed for mathematics computer science and engineering students The book is crowned with modern optimization methodologies Without the optimization part the book can be used as a textbook in a one or two term undergraduate course in combinatorial and algorithmic mathematics The optimization part can be used in a one term high level undergraduate course or a low to medium level graduate course The book spans xv 527 pages across 12 chapters featuring 391 LaTeX pictures 108 tables and 218 illustrative examples There are also 159 nontrivial exercises included at the end of the chapters with complete solutions included at the end of the book Complexity progressively grows building upon previously introduced concepts The book includes traditional topics as well as cutting edge topics in modern optimization

**Languages, Compilers, and Tools for Embedded Systems** Frank Mueller, Azer Bestavros, 1998 This book constitutes the strictly refereed post workshop proceedings of the ACM SIGPLAN Workshop on Languages Compilers and Tools for Embedded Systems LCTES 98 held in Montreal Canada in June 1998 The 19 revised papers presented were carefully reviewed and selected from a total of 54 submissions for inclusion in the book also included are one full paper and an abstract of an invited contribution The papers address all current aspects of research and development in the rapidly growing area of embedded systems and real time computing

**Cooperative Event-Based Control of Mobile Agents** Michael Schwung, 2022-06-01 This thesis proposes a method that plans trajectories for autonomous agents to enable them to fulfil different tasks while ensuring the collision free movement The agents are locally controlled and connected over an unreliable communication network that may induce packet losses and transmission delays Further sensors e g for a distance measurement are not used and communication should only be invoked if it is necessary to avoid a collision The basic problem occurs for two agents The first agent can change its trajectory at any time without regard to the second agent which has to ensure the collision avoidance To this aim it adapts its trajectory based only on local data and communicated information about the current and future movement of the first agent A control unit for the second agent is introduced that has to execute four tasks to ensure the control aims

- 1 Estimation of the current

network properties 2 Prediction of the movement of the stand on agent 3 Invocation of communication whenever the local data becomes too uncertain 4 Planning of collision avoiding trajectories The main result of the thesis is a novel control method for mobile agents that solves the four tasks leading to a proven collision avoidance The method consists of a delay estimator a prediction unit an event generator and a trajectory planning unit The method can be used for different types of agents e g UAVs or cars with only slight modifications The proposed method is tested and evaluated through simulations and experiments with both two quadrotors and two nonholonomic robots
