

**End User Searching: Services and Providers.** M. KESSELMAN AND S. B. WATKINS (Eds.). American Library Association, Chicago and London (1988). iv + 330 pp., 346. ISBN 0-8389-0485-2.

At first glance, the title of this practical *End User* guidebook would appear to provide us with a clear snapshot idea of its contents. This book endeavours to cover the field of end user searching, both from the perspective of the types of services provided in libraries, and of the data banks and information companies that offer a wide spectrum of database services to libraries. And it succeeds remarkably well in this goal.

The table of contents reinforces this initial impression. It informs us that the guide aims, first, to provide a background on end-user searching in libraries, in Chapters 1 and 2; next, to provide a framework for the training and education of end users (Chapter 3); then, to describe and define the various end user services offered by different service providers, in Chapters 4 through 9; while Chapters 10 and 11 round out the picture with a most succinct of the latest in freeword and free-disc distributed services for end-users.

Some of the contributors have written succinct, well researched chapters. Notably, Chapters 4 through 9, with their elegant style, are rich sources of information and useful professional advice. In these chapters, each author stands at the leading edge of his field.

Stanley Nade, in Chapter 4, "End-User Services Available From BBN" (pp. 48-60) is acutely attuned to the latest developments, most noteworthy events, and current activity at BBN. Stephen Smith, in Chapter 7, "End-User Services in Business and Related Fields" (pp.92-122) displays a thoroughly sound and convincing grasp of databanks and databases in this large and bewildering field. Chapter 10, fielded by co-editor Martin Kesselman, inventories a plethora of front ends and gateways to data, even the most faded of online offerings. After all, online searching, no matter how experienced, need to be constantly updated on the availability, currency and inherent utility of such services. Mr. Kesselman succeeds in doing just that. This is an informative chapter.

Yet, certain chapters appear to have been written in some haste, in particular, the first two. The variability in both style and content that the reader encounters from one chapter to the next can easily leave us with the impression that this little guide suffers from lack of editorial control. Moreover, if the first two chapters fail to pique the reader's interest, they will leave their indelible mark on the rest of the work.

On the whole, Chapter 1 provides a reasonable assessment of the historical background, issues, and factors surrounding the implementation of end user searching. But, there are some weaknesses. I was particularly struck by the premise underlying the justification, "... you can obtain justification support simply by pointing out that you may be the only institution of its kind not offering its patrons access to information online." (pp. 12). One would be hard pressed at this day and age not to find other similar institutions in any town or city that do not already offer regular online services! Other conclusions of this nature can be found in this chapter.

Yet, it is with Chapter 2, "Starting an End-User Service," that I have the greatest misgivings. What Ms. Lowe deserves credit for her ample experience in the administration and coordination of online, including end-user, services, her chapter suffers from awkward style and a tendency to end prescription, verging on the didactic.

I just can't help but wonder why she has gone to such lengths to place emphasis on certain elements of online programs, while downplaying others. For the sake of clarity alone, Ms. Lowe should have first identified the key areas of online service implementation, program development, administration, and evaluation prior to discussing these in depth. As it stands, the chapter lacks thematic structure.

I often find myself at odds with her sense of priorities, and with her technical advice. Ms. Lowe describes a 1200 BAUD modem as "fast" (pg. 24), when, by current standards, most North American libraries are already searching at 2400 BAUD, with 9600 bauds on the horizon. Such advice is misleading.

Moreover, I find myself unable to swallow the author's premises in her discussion of marketing and promotion, where she seems, if anything, to be too much on the side of caution (pp. 15, 36). In reality, there are as many approaches to online marketing as there are marketing styles. This chapter should have included a broader examination of the whole question of marketing. Unfortunately, it did not.

These conceptual shortcomings, along with others, result in a chapter that never fully serve as a meaningful basis for the implementation of an online program. At the very least, the author should have focused more on training and orientation, without which no modern online program worth its salt can survive.

Other readily identifiable shortcomings plague this guide in general. The most notable of these are:

Chowdhury,2010 An information retrieval IR system is designed to analyse process and store sources of information and retrieve those that match

a particular user's requirements. A bewildering range of techniques is now available to the information professional attempting to successfully retrieve information. It is recognized that today's information professionals need to concentrate their efforts on learning the techniques of computerized IR. However, it is this book's contention that it also benefits them to learn the theory, techniques and tools that constitute the traditional approaches to the organization and processing of information. In fact, much of this knowledge may still be applicable in the storage and retrieval of electronic information in digital library environments. The fully revised third edition of this highly regarded textbook has been thoroughly updated to incorporate major changes in this rapidly expanding field since the second edition in 2004 and a complete new chapter on citation indexing has been added. Unique in its scope, the book covers the whole spectrum of information storage and retrieval including users of IR and IR options, database technology, bibliographic formats, cataloguing and metadata, subject analysis and representation, automatic indexing and file organization, vocabulary control, abstracts and indexing, searching and retrieval, user-centred models of IR and user interfaces, evaluation of IR systems and evaluation experiments online and CD-ROM, IR multimedia, IR hypertext and mark-up languages, web IR, intelligent IR, natural language processing and its applications in IR, citation analysis and IR in digital libraries and trends in IR research. Illustrated with many examples and comprehensively referenced for an international audience, this is an indispensable textbook for students of library and information studies. It is also an invaluable aid for information practitioners wishing to brush up on their skills and keep up to date with the latest techniques.

**Library 3.0** Tom Kwanya, Christine Stilwell, Peter Underwood, 2014-12-09. The emerging generation of research and academic library users expect the delivery of user-centered information services. Apomediation refers to the supporting role librarians can give users by stepping in when users need help. Library 3.0 explores the ongoing debates on the point-of-phenomenon and its impact on service delivery in libraries. This title analyses Library 3.0 and its potential in creating intelligent libraries capable of meeting contemporary needs and the growing role of librarians as apomediators. Library 3.0 is divided into four chapters. The first chapter introduces and places the topic in context. The second chapter considers point-of-libraries. The third chapter covers library 3.0 librarianship while the final chapter explores ways libraries can move towards 3.0. Focuses on social media in research and academic libraries. Gives context to the discussion of apomediation in librarianship and information services provision. Provides a balance between more traditional and more progressive approaches.
