End Of Science Attack And Defense:

The End of Science? Richard Quentin Elvee, 1992 The title *The End of Science* asks not whether science itself is about to end or even to wane but whether people will stop claiming that science knows nature as it is Science it suggests may know nature only as the scientist sees it Or the title suggests that in knowing nature scientists to some extent create nature No one bothers to ask philosophers or theologians poets or politicians workers or bosses whether they know the world as it is It is common knowledge that the world for which they speak has been affected already by their description of that world Will not the same fate strike scientists now Has it not already This is the basic issue that the six distinguished contributors address They include Sandra Harding Sheldon Lee Glashow Ian Hacking Mary Hesse Gerald Holton and Gunther S Stent Co published with the Nobel Conference

Rhetoric and Ethics in the Cybernetic Age Jeff Pruchnic, 2013-08-15 It has become increasingly difficult to ignore the ways that the centrality of new media and technologies from the global networking of information systems and social media to new possibilities for altering human genetics seem to make obsolete our traditional ways of thinking about ethics and persuasive communication inherited from earlier humanist paradigms This book argues that rather than devoting our critical energies towards critiquing humanist touchstones we should instead examine the ways in which media and technologies have always worked as crucial cultural forces in shaping ethics and rhetoric Pruchnic combines this historical itinerary with critical interrogations of diverse cultural and technological sites the logic of video games and artificial intelligence the ethics of life extension in contemporary medicine the transition to computer automated trading in world stock markets the state of critical theory in the contemporary humanities along with innovative analyses of the works of such figures as the Greek Sophists Kenneth Burke Martin Heidegger Michel Foucault Friedrich Nietzsche and Gilles Deleuze This book argues that our best strategies for crafting persuasive communication and producing ethical relations between individuals will be those that creatively replicate and appropriate rather than resist the logics of dominant forms of media and technology

Science and Anti-science Gerald James Holton, 1993 What is good science What goal if any is the proper end of scientific activity Is there a legitimating authority that scientists may claim How serious a threat are the anti science movements These questions have long been debated but as Gerald Holton points out every era must offer its own responses This book examines these questions not in the abstract but shows their historic roots and the answers emerging from the scientific and political controversies of this century Employing the case study method and the concept of scientific themata that he has pioneered Holton displays the broad scope of his insight into the workings of science from the influence of Ernst Mach on twentieth century physicists biologists psychologists and other thinkers to the rhetorical strategies used in the work of Albert Einstein Niels Bohr and others from the bickering between Thomas Jefferson and the U S Congress over the proper form of federal sponsorship of scientific research to philosophical debates since Oswald Spengler over whether our scientific knowledge will ever be complete In a masterful final chapter Holton scrutinizes

the anti science phenomenon the increasingly common opposition to science as practiced today He approaches this contentious issue by examining the world views and political ambitions of the proponents of science as well as those of its opponents the critics of establishment science including even those who fear that science threatens to overwhelm the individual in the postmodern world and the adherents of alternative science Creationists New Age healers astrologers Through it all runs the thread of the author s deep historical knowledge and his humanistic understanding of science in modern culture Science and Anti Science will be of great interest not only to scientists and scholars in the field of science studies but also to educators policymakers and all those who wish to gain a fuller understanding of challenges to and doubts about the role of science in our lives today

Under Cover of Science James R. Hackney Jr.,2007-03-28 A critique of the Law Economics movement this book draws connections between conceptions of science and efforts at legitimating American legal theory as an objective enterprise

Science as It Could Have Been Lena Soler,Emiliano Trizio,Andrew Pickering,2016-02-19 Could all or part of our taken as established scientific conclusions theories experimental data ontological commitments and so forth have been significantly different Science as It Could Have Been focuses on a crucial issue that contemporary science studies have often neglected the issue of contingency within science It considers a number of case studies past and present from a wide range of scientific disciplines physics biology geology mathematics and psychology to explore whether components of human science are inevitable or if we could have developed an alternative successful science based on essentially different notions conceptions and results Bringing together a group of distinguished contributors in philosophy sociology and history of science this edited volume offers a comprehensive analysis of the contingency inevitability problem and a lively and up to date portrait of current debates in science studies

Parallel and Distributed Processing and Applications Yi Pan, Daoxu Chen, Minyi Guo, Jiannong Cao, Jack Dongarra, 2005-10-19 Welcome to the proceedings of ISPA 2005 which was held in the city of Nanjing. Parallel computing has become a mainstream research area in computer science and the ISPA conference has become one of the premier forums for the presentation of new and exciting research on all aspects of parallel computing. We are pleased to present the proceedings for the 3rd International Symposium on Parallel and Distributed Processing and Applications ISPA 2005 which comprises a collection of excellent technical papers and keynote speeches. The papers accepted cover a wide range of exciting topics including architectures, software, networking and applications. The conference continues to grow and this year a record total of 968 manuscripts including workshop submissions were submitted for consideration by the Program Committee or workshops. From the 645 papers submitted to the main conference, the Program Committee selected only 90 long papers and 19 short papers in the program. Eight workshops complemented the outstanding paper sessions.

Bulletin of the Atomic Scientists, 1988-09 Reason and Culture John Arthur, Amy Shapiro, William Throop, 2001 This introduction to philosophy offers a selection of readings based on an interdisciplinary applied approach and illustrating the challenges religion, science and morality pose to one another. It demonstrates to readers how philosophy is practiced today rather than in years past and engages them in a relevant and immediately comprehensible manner. The book maintains the critical rational edge of traditional philosophical writing while at the same time incorporating material and approaches not usually found in introductory volumes. Reason sections provide traditional philosophical truth claims made in each subject. Culture sections investigate the social issues that arise from these claims. What Is Morality? Morality and the Good Life. Morality in Higher Education. Morality in Film. Morality in Law. Morality in Markets. Morality and Rational Self Interest. Classical Theories of Morality. Critical Perspectives on Morality. Feelings and Reason in Morality. What Is Science? Science and a Meaningful Life. The Scientific World View and Its Critics. Science Technology and the Transformation of Culture. Biology and Ethics. Scientific Determinism and Human Responsibility. Objectivity and Values in Science. Truth and Progress in Science. How Much Can Science Explain? What Is Religion? Religion and the Meaning of Life. Pluralism and Religious Diversity. Religion and Politics. Religion and Education. Evidence for the Existence of God. Evidence Against the Existence of God. Faith and Reason. Religious Practice without God. For anyone
