Energy Metabolism in Farm Animals M.W. Verstegen, A.M. Henken, 2012-12-06 Animal production systems have changed dramatically over the last two decades Knowledge of energy metabolism and environmental physiology has increased as appears from many textbooks on these disciplines The contents of the symposia on energy metabolism of farm animals show this and they have initially focussed on feed evaluation and later on comparative aspects of energy metabolism They show part of the progress being made Application of knowledge of energy metabolism for animals has a long history since Lavoisier In addition to this studies about the environmental requirements of animals have shown that we are still far from accurate assessment of these requirements in terms of nutrients and energy In model studies on energy metabolism researchers have recognized the interaction between the environment and the energy requirements of animals Estimation of energy requirements has been done in physiological physical and behavioural studies The impact of conditions as encountered by animals in various production systems has been approached from different viewpoints related to these different disciplines In addition various kinds of infections bacterial parasitic subclinical clinical have been evaluated only recently with regard to their effect on protein and/or energy metabolism and thus on production People working in the field of feed evaluation have defined how chemical and physical properties of nutrition influence energy to be derived for maintenance and production

Biology of Stress in Farm Animals: An Integrative Approach P.R. Wiepkema, P.W.M. van Adrichem, 2012-12-06 This book contains the contributions to a workshop on stress in farm animals held on April 17-18 1986 at the Pietersberg Conference Centre Oosterbeek The workshop was financed by the Commission of the European Communities from its budget for the coordination of Community Agricultural Research and the Agricultural University of Wageningen The Netherlands Its aim was to bring together experts from different disciplines all having in common that in one way or another they were involved in stress research Such a multidisciplinary encounter should not only provide an interesting description of present day knowledge on stress but also promote a more integrated view on stress phenomena as they occur in higher vertebrates In the course of this workshop the following fields of research were related to stress endocrinology immunology pathology neurobiology ethology and theoretical biology Each of these relationships was introduced by one speaker presenting a concise state of the art The same relationship was elaborated by a second speaker

implementing the available knowledge as far as possible to the farm animal situation Therefore in this book each discipline is represented by a duo and introduced by some integrating remarks *Improving Genetic Disease Resistance in Farm Animals* Akke Jitske Akkermans, W. Sybesma, 2012-12-06 This publication contains the proceedings of a seminar held in Brussels on November 8 9 1988 The title of the seminar was Reducing the costs of disease by improving resistance through genetics The seminar was held as an activity of the Community Programme for the Coordination of Agricultural Research 1984 1988 Costs of disease depend on losses caused by morbidity mortality and production decreases and on the costs of preventive measures including vaccination and medication Production losses often contribute a major portion to the total costs To reduce costs of disease preventive measures like vaccination preventive medication and hygienic procedures are applied Genetic resistance is an attractive preventive measure because of its consistent nature in the next generations because it precludes veterinary services and because there are no side effects Constraints are the long term investment relatively slow progress per generation in combination with production traits and the considerable lack of knowledge about inheritance of resistance mechanisms in farm animals **Cattle Housing Systems, Lameness and Behaviour** H.K.

Ultrasound and Animal Reproduction M.A.M. Taverne, A.H. Willemsse, 2013-06-29 The use of ultrasonic imaging techniques for diagnostic purposes in veterinary medicine and animal science has lagged far behind their use in human medicine In the area of domestic animal reproduction diagnostic ultrasonography has a relatively short history Reports on B mode scanning first appeared as late as 1969 when Stouffer and co-workers used it for counting foetal numbers in late gestation sheep After Lindahl had re-evaluated the potential of two dimensional ultrasonography for pregnancy diagnosis in sheep in 1976 results of the first large scale field trials by Fowler and Wilkins on predicting foetal numbers during the first

half of gestation in sheep were published as recently as 1980 In this year also the first paper by Palmer and co workers on ultrasonic scanning of the uterus and ovaries in the mare appeared The improvement of diagnostics which was achieved by the application of this technique is illustrated by its present routine use in clinical equine practice and sheep breeding Besides offering an accurate early pregnancy diagnosis in species such as the horse cow sheep goat pig and dog ultrasonography enables the visualization of ovarian and uterine structures for the identification of both physiological and pathological conditions In this way it replaces or supplements the more common diagnostic techniques used by the general practitioner so far Ultrasonography has also opened several new lines of research for clinicians and research workers

Helminth Zoonoses Stanny Geerts,V. Kumar,J. Brandt,1987-06-30 In spite of the availability of modern broad spectrum anthelmintic drugs the prevention and control of helminth zoonoses remain a challenge to human and veterinary parasitologists and to physicians and veterinarians working on the field Although the life cycles of most helminths of zoonotic importance are well known there are still major gaps in our knowledge especially in the fields of epidemiology diagnosis and treatment The International Colloquium on Helminth Zoonoses held at the Institute of Tropical Medicine Antwerp 11-12 December 1986 laid emphasis on more recent advances made in the control and epidemiology of these zoonotic diseases The disease complexes echinococcosis hydatidosis taeniasis cysticercosis and the larva migrans syndrome were dealt with in considerable detail In the first chapter the phenomenon of strain variation in *Echinococcus* spp is examined in the light of newer findings The progress made in recent years towards a more specific diagnosis and drug targeting in hydatidosis is reported In the second chapter recent advances in immunisation and treatment of cysticercosis are dealt with The possibility of the existence of strain differences in *Taenia saginata* is also discussed The third chapter is devoted to trematode zoonoses with particular reference to the situation in South east Asia Senegal schistosomiasis and Liberia paragonimiasis In the last chapter the larva migrans syndrome is treated in detail with special attention to its etiology and diagnosis Reports on lesser known nematode zoonoses like mammomonosomiasis and oesophagostomiasis are included *Modelling of Livestock Production Systems* S. Physiological and Pharmacological Aspects of the Reticulo-Rumen L.A.A. Ooms,A.D. Degryse,A.S.J.P.A.M. van Miert,2012-12-06 The success of a scientific workshop depends on a delicate blend of many types of ingredients Most important is to select a provocative topic which is at the forefront of a current investigative study Coupled together with a relatively small but distinguished group of active research scientists known for their continued record of contributing significant findings one has the firm foundation for an exciting and rewarding investment of time and effort This was the setting for the first workshop organized by the European Association for Veterinary Pharmacology and Toxicology Ruminants have been domesticated for many centuries and have served mankind as a source of dairy products meat wool and power The

ruminant stomach has long been and still is a major concern for physiologists pathologists clinicians and pharmacologists This workshop was organized and convened in an attempt to strengthen the basic science of the ruminant stomach as it applies to an economically important group of mammals To achieve this various topics were covered by specialists which ensured presentation of new data followed by discussions In this book reviews are presented on the different topics motility control and regulation neurotransmitters and endogenous substances involved flow of digesta comparative aspects role of content and metabolites food intake rumen metabolism chemical manipulation metabolism of xenobiotics and drugs pharmacology of forestomach motility and the reticulo rumen as a pharmacokinetic compartment **Acute Virus**

Infections of Poultry J.B. McFerran, M.S. McNulty, 2012-12-06 This book is based on the proceedings of a seminar on acute viral infections of poultry which was held in Brussels on 13-14 June 1985 The aim of the seminar which was sponsored by the CEC was to gather information on those infections of immediate or increasing importance It is hoped that dissemination of this information will make it easier to harmonize diagnostic and control measures throughout the member states of the EEC Several points emerge from recent outbreaks of highly pathogenic avian influenza In view of the apparent change in pathogenicity of the virus involved in the outbreak in the USA infections of domestic poultry particularly with H5 and H7 subtypes should be regarded as a potential threat even if the viruses involved are of low pathogenicity The reasons for the amount of lateral spread which occurred in the USA outbreak are still not clear and it can not be assumed that future outbreaks of highly pathogenic avian influenza will tend to be self limiting as in the past The importance of denying access of wild birds particularly water fowl to domestic poultry needs to be re emphasised Lastly there appears to be increasing support for a combination of slaughter and ring vaccination to control future outbreaks of spreading avian influenza

Evaluation and Control of Meat Quality in Pigs P.V. Tarrant, G. Eikelenboom, G. Summer Mastitis G. Thomas, H.J. Over, U. Vecht, P. Nansen, 2012-12-06 This Community meeting has been organised since over the past 15 years in different countries of Western Europe including Scandinavia a lot of research has been directed to the summer mastitis problem Summer mastitis in cattle is a well known disease which because of its abruptness and the difficulties concerned in defining the predisposing factors and the pathogens involved is hard to control Moreover as it is anticipated that in the transmission of the bacteria one or more dipterans are involved the complexity in defining the disease and hence coordinating our scientific knowledge in relation to practical control was stimulus enough for this workshop to be organised Our aims can be summarised in the following goals 1 Exchange of information in the practical technical and scientific field in order to stimulate a coordinated research approach at a time in which the cattle husbandry sector is under great economical stress 2 Inform research workers from countries where the disease is or seems to be not endemic on

aspects that might be of interest for them in the approach of comparable problems 3 To draw up conclusions and recommendations with regard to future research activities in order to avoid needless duplication of effort

Diagnosis of Mycotoxicoses J.L. Richard, J.R. Thurston, 2012-12-06 Current problems associated with the mycotoxicoses include the recognition of an animal disease as being a mycotoxicosis and confirmation of diagnosis of the mycotoxicosis by satisfactory laboratory methods By gathering a vast amount of scientific literature diagnosticians can provide themselves with suitable information for making such a diagnosis However the increased number of reported intoxications caused by fungi the wide range in diversity of disease conditions and the chemical compounds causing the mycotoxicoses and the ever changing and rapid developments in the technology of mycotoxin analysis has made the gathering and assimilation of sufficient information by the diagnostician an insurmountable task This is the reason for development of the symposium and the publication of this book the first time that the subject of diagnosis of mycotoxicoses has been assembled in a single publication and as a compilation of topic papers by experts in this subject area The UJNR panel on toxic microorganisms is interested in all aspects of intoxications by microorganisms as evidenced by its annual joint meetings in either the United States or Japan and its involvement in sponsoring numerous symposia and several publications in this broad scientific area The overall mission of the National Animal Disease Center includes research efforts in the improvement or establishment of diagnostic methods for animal diseases The UJNR panel and the NADC provided the funds and encouragement for the development of a symposium on the diagnosis of mycotoxicoses in the United States and Tapan
