## **Endocrinology Of Embryo Endometrium Interactions:**

Endocrinology of Embryo—Endometrium Interactions Stanley R. Glasser, Joy Mulholland, Alexandre Psychoyos, 2012-12-06  
Early embryonic loss is a continuing social and economic global problem In human populations the estimates of interruptions early in pregnancy range from 35 60% In animal husbandry swine ruminants fully 30% of pregnancies fail to survive early events of gestation The futility associated with this persistent high risk is even more unsettling because of advances made in assisted reproductive technology which although this very selective methodology has added to our knowledge of embryo endometrial interactions has resulted in a birth rate of only 14% These studies have instigated comparisons of the live relative contributions of the embryo and the uterus to the outcome of pregnancy These analyses have shown that we have learned significantly less about the role of the uterus in deciding the outcome of either natural or assisted pregnancies In 1979 a quotation by George Corner was used to set the tone of a meeting that was devoted to discussion of the cellular and molecular aspects of implantation In spite of the proliferation in research activity which occurred in the following 15 years our real understanding of the embryo transfer process has fallen short of our expectations We use the Corner quotation once again to preface this symposium so that we may recall that the fundamental nature of the process which regulates embryo endometrial interactions still escapes us

*Molecular Research of Endometrial Pathophysiology* Paola Viganò, Andrea Romano, 2019-10-14 The endometrium has been the subject of intense research in a variety of clinical settings because of its importance in the reproductive process and its role in women's health In the past 15 years significant efforts have been invested in defining the molecular phenotype of the receptive phase endometrium as well as of various endometrial pathologies Although this has generated a wealth of information on the molecular landscape of human endometrium there is a need to complement this information in light of the novel methodologies and innovative technical approaches The focus of this International Journal of Molecular Sciences Special Issue is on molecular and cellular mechanisms of endometrium and endometrium related disorders The progress made in the molecular actions of steroids in the metabolism of steroids and intracrinology in endometrial intracellular pathways in stem cells biology as well as in the molecular alterations underlying endometrium related pathologies has been the focus of the reviews and papers included

**Male-Mediated Developmental Toxicity** Andrew F. Olshan, Donald R. Mattison, 2012-12-06 The cause of many of the adverse reproductive outcomes and developmental diseases among offspring is not well understood Most of the epidemiologic and experimental animal research has focused on the relationship between maternal exposures including medications tobacco smoke alcohol infections and occupation and the occurrence of spontaneous abortion low birth weight and birth defects The potential role of

paternal exposures has not been investigated as extensively despite long standing animal research that demonstrates the induction of mutations in the male germ cell after exposure to certain agents and subsequent reproductive failure or early pregnancy loss Given this relative lack of interest acquisition of epidemiologic data and the development of a definitive model or mechanism for potential male mediated effects has been hindered However recent laboratory and epidemiologic investigations have suggested that paternal exposures may be more important than previously suspected This topic has been termed by some as male mediated developmental toxicity This is meant to refer to the effects of exposures and other factors relating to the male parent that result in toxicity to the conceptus and abnormal development The developmental endpoints of interest can include fetal loss congenital abnormalities growth retardation cancer and neurobehavioral effects These effects may operate through a variety of mechanisms including gene mutation chromosomal aberrations seminal fluid transfer of toxicants and epigenetic events Yen and Jaffe's Reproductive Endocrinology Jerome Frank Strauss, Robert L. Barbieri, 2009-01-01 Thoroughly revised and now enhanced with color artwork this new edition offers the latest information on the diagnosis and management of reproductive endocrine disorders As an Expert Consult title it includes convenient online access to the complete text of the book along with all of the images and references linked to Medline

**Implantation and Early Development** Hilary Critchley, Iain Cameron, Stephen Smith, 2005-06-01 Successful implantation and early development need a union of healthy genes and an optimal uterine environment The 48th RCOG Study Group an international multidisciplinary expert forum considered factors involved in preparation for implantation within the uterus how to determine a good egg and good sperm lessons from animal models transgenic and genomic technologies sporadic and recurrent early pregnancy loss single embryo transfer and the developmental consequences of assisted reproduction technologies This book presents the findings of the Study Group with sections covering preparation for implantation the uterine environment the embryo lessons from animal models transgenics and novel technologies clinical sequelae **Reproductive Tissue Banking** Armand M. Karow, John K. Critser, 1997-03-20 Reproductive technologies to assist in both human conception and animal breeding are increasingly in demand These technologies along with the advent of tissue engineering have propelled the challenges of tissue collection preservation and banking to the research forefront Using examples drawn from reproductive technologies Reproductive Tissue Banking presents the scientific principles underlying tissue banking These examples serve as models for the technology of banking other living tissues including blood bone marrow cornea and skin In discussing research emerging from their laboratories and those of others the authors meld fundamentals of biology chemistry and physics with the latest discoveries in the field to give the reader profound insight into research directions and ethical considerations crucial to the advancement of tissue banking With its emphasis on human applications and concerns this book provides a valuable supplement to short courses on tissue preservation and tissue engineering Researchers in reproductive medicine animal and veterinary science and cryobiology will find this book with its

extensive bibliography a very handy reference Written by leading international researchers Provides insightful discussions on reproductive tissue banking Presents comprehensive citations to relevant literature both current and historic Discusses in vitro preservation of spermatozoa oocytes embryos and gonadal tissues of mammals Contains coverage of ethical considerations from a discussion of the splitting of embryos to an exploration of the protection of biodiversity *Placenta and Trophoblast* Michael J. Soares,Joan S. Hunt,2008-02-02 A collection of cutting edge laboratory techniques for the study of trophoblast and placental biology The techniques presented range from experimental animal models to animal and human placental organ and cell culture systems to morphological biochemical and molecular strategies for assessing trophoblast placental growth differentiation and function Volume 1 provides readily reproducible protocols for studying embryo uterine implantation trophoblast cell development and the organization and molecular characterization of the placenta Highlights include strategies for the isolation and culture of trophoblast cells from primates ruminants and rodents and precise guidance to the molecular and cellular analysis of the placental phenotype A companion second volume concentrates on methods for investigating placental function **Manual of Embryo Selection in Human Assisted Reproduction**

Catherine Racowsky,Jacques Cohen,Nicholas Macklon,2023-01-26 Selecting the best embryo to transfer to the uterus is key to successful in vitro fertilization IVF A huge amount of research has been devoted to this topic and there are numerous methods used from simple morphological assessment to molecular biological techniques to assess the genome and metabolism of the newly fertilized embryo For many of these techniques an adequate evidence base is lacking and expert opinion is valuable Clinical imperatives require ranking all embryos in a cohort according to their viability thereby enabling the selection of the best embryo to optimize live birth outcome a key indicator used to measure and rate IVF Clinics worldwide This clear and informative manual will provide embryologists and clinicians with an overview of the tools now available to assist in embryo selection as well as evidence for their efficacy and safety and the broader considerations that must underlie these important clinical decisions **HLA and the Maternal-fetal Relationship** Joan S.
