Eric A. Jaffe

Endothelial Cell Culture:

Endothelial Cell Culture Roy Bicknell, 1996-09-28 The aim of the Handbooks in Practical Animal Cell Biology is to provide practical workbooks for those involved in primary cell culture Each volume addresses a different cell lineage and contains an introductory section followed by individual chapters on the culture of specific differentiated cell types The authors of each chapter are leading researchers in their fields and use their first hand experience to present reliable techniques in a clear and thorough manner Endothelial Cell Culture contains chapters on endothelial cells derived from 1 lung 2 bone marrow 3 brain 4 mammary glands 5 skin 6 adipose tissue 7 female reproductive system and 8 synovium Methods in Endothelial Cell Biology Hellmut G. Augustin, 2012-12-06 Endothelial cell biology has developed into a vibrant discipline and has become a critical instrument to study several disease processes on the cellular and molecular level It is now widely recognized that dysfunctions of normal endothelial cell homeostasis are involved in some of the most important human diseases including ischemic heart diseases hypertension atherosclerosis tumors diabetes arthritis and inflammation Further the increasing importance and recognition of the field of vascular biology in general requires in vitro and in vivo techniques in order to address the complex questions *Methods in Endothelial Cell Biology* is a comprehensive practical how to guide summarizing the most relevant established techniques as well as a number of new emerging techniques Easy to follow reliable protocols provide a useful lab bench resource for the experienced researcher and newcomer to the field *Biology of Endothelial Cells* Eric A. Jaffe, 2012-12-06 The participation of endothelial cells in various physiologic and pathologic processes has been hypothesized since before the turn of the century However until recently direct evidence for endothelial involvement in these processes has been extremely difficult to obtain due to the inability to study endothelial cell function in vitro Though the possibility of using cultured endothelial cells to study endothelial cell function in vitro was recognized many years ago the inability to culture unambiguously identifiable endothelial cells limited investigators in their studies of endothelial function As a result the field of endothelial cell biology lay relatively fallow for many years The development in the early 1970 s of routine and easily implemented methods for culturing human endothelial cells and the demonstration that cultured endothelial cells synthesized a physiologically relevant protein Factor VIII von Willebrand Factor quickly changed this state of affairs Over the following decade the scope of endothelial cell research rapidly widened spreading in a number of directions First methods were developed to culture endothelial cells from a variety of species Second methods were developed to culture endothelial cells from different organs and types of blood vessels arteries veins and capillaries within a single species Third and most important investigators began using cultured endothelial cells as tools to study the potential involvement of endothelial cells in a wide assortment of biologically interesting processes The net result has been a tremendous increase in our understanding of endothelial cell function **Cell Culture Techniques in Heart and Vessel Research** H.M. Piper, 2012-12-06 In the cardiovascular sciences an increasing demand for the use of modern methods of cell

biology has developed The use of specific cell culture models of the various tissues involved is essential for most of these novel approaches This book meets the demand for a comprehensive and easy accessible source for cell culture methods in cardiovascular research as it was not previously available The basic methods for cultures of cardiomyocytes embryonic and adult endothelial cells micro and macrovascular smooth muscle cells and pericytes are described in detail by an international selection of experts Special chapters discuss the use of growth factors and attachment substrates techniques for co cultures cultures on permeable filter membranes and microcarrier cultures The methodological descriptions are sufficiently detailed for an immediate application in the laboratory All chapters also contain a critical evaluation of alternative approaches

Endothelial Cell Culture in Microfluidically Perfused Biochips Enables the Recreation of Microphysiological Conditions of the Human Vasculature in Vitro Martin Raasch, 2020* The endothelium lines the inner surface of all blood vessels representing an important tissue with vital functions to mediate tissue homeostasis Tissue tissue interfaces play a critical role throughout the human body where endothelial cells ECs contribute by creating vital barriers with tight and adherens junctions to regulate permeability of macromolecules and fluids while protecting and nourishing adjacent tissue They are the most prominent cell type to experience physical forces of shear stretch and strain through the laminar pulsatile nature of the bloodstream Alterations in physiological flow profiles have a strong impact on EC pathology contributing to diseases like atherosclerosis and coronary heart disease as well as inflammatory conditions Further they are among the first cell types to interact with xenobiotics Endothelial endocytosis and barrier regulation have profound impact on drug tissue interactions There is the need for technological innovations and improvements to study EC biology EC epithelial and EC nanocarrier interactions in more complex settings that take physiological biophysical and biochemical cues into account For this purpose the Multi Organ Tissue Flow MOTiF biochip has been invented and its design has been finalised during the beginning of this thesis The objective was to develop handling and cellular seeding protocols for the biochip to establish more in vivo like and more complex in vitro EC culture approaches Within the scope of this thesis the biochip has been characterised for perfused EC culture Complex co cultures with tissue resident macrophages and further with murine cortical spheroids present in liver sinusoidal structures and at the blood brain barrier BBB have been established respectively Additionally first applications under physiological parameters of shear stress have been made The focus was on nanocarrier uptake profiles and microvascular endothelial barrier interaction

Robert J. Mello, 1977 Endothelial Cells Una S. Ryan, 1988-04-30 This three volume compendium is the most comprehensive work to date on endothelium cells and their important role in the functions of the internal framework The endothelial cell is broken down into its different properties taking into consideration its part in metabolic hemostatic and immunological processes as well as their interaction with each other and different cell types Numerous illustrations featured throughout help clarify the importance of endothelium in maintaining the internal status quo These volumes are indispensable

able to researchers physicians and others interested in endothelium vascular biology and circulatory research The Endothelial Cell - a Pluripotent Control Cell of the Vessel Wall D. G. S. Branco, 2000 Cell-Culture Test Methods S. A. Brown, 1983 **Cell Culture in Pharmaceutical Research** N.E. Fusenig, H. Graf, 2013-03-14 Cell biology has made an appreciable impact on the evaluation of physiological and pathophysiological processes leading to a more detailed understanding of the signaling mechanisms by which cells communicate in vivo and in vitro and modify adaptively By using cell culture models in addition to animal experiments we are now able to better define the overall and the selective potential of drugs This book is designed to give information on the advantages and limitations and on new aspects and the meaning of cell culture models in pharmaceutical research **Medicines from Animal Cell Culture** Glyn N. Stacey, John Davis, 2007-06-29 Medicines from Animal Cell Culture focuses on the use of animal cell culture which has been used to produce human and veterinary vaccines interferon monoclonal antibodies and genetically engineered products such as tPA and erythropoietin It also addresses the recent dramatic expansion in cell based therapies including the use of live cells for tissue regeneration and the culture of stem cells Medicines from Animal Cell Culture Provides comprehensive descriptions of methods for cell culture and nutrition as well as the technologies for the preservation and characterisation of both the cells and the derived products Describes the preparation of stem cells and others for use in cell based therapies an area of burgeoning research Includes experimental examples to indicate expected results Covers regulatory issues from the UK the EU and the USA and reviews how these are developing around the world Addresses the key issues of standardisation and validation with chapters on GLP and GMP for cell culture processes Delivering insight into the exciting world of biological
