Energetics And Technology Of Biological Elimination Of Wastes:

Energetics and technology of biological elimination of wastes, 1979 *Energetics and Technology of Biological Elimination of Wastes* Giulio Milazzo, 1981 *Energetics and Technology of Biological Elimination of Wastes*, 2011-09-22
Energetics and Technology of Biological Elimination of Wastes *Waste Materials in Construction* Th.G. Aalbers, J.J.J.M. Goumans, H.A. van der Sloot, 1991-11-13 *Waste Materials in Construction* contains papers from the first international conference on the environmental implications of construction with waste materials held in Maastricht in November 1991. The three key themes of the conference are technical options for the application of waste materials in products for the construction industry, the resulting chemical and environmental aspects thereof, and legislation policies as they pertain to waste management. There has been a great deal of laboratory testing carried out in several countries on the impact of waste derived products on the environment, since most of these products are used in close contact with the soil, e.g. road construction. There is, however, no consensus as to the methodologies possible for assessing the environmental behaviour of waste residue and the consequences of using them, nor for developing standards to ensure environmentally safe re-use. The first half of the conference addresses this problem of lack of consensus. The second half deals with technical solutions and procedures to use waste materials for the production of construction materials. *Waste Materials in Construction* G.J. Senden, H.A. van der Sloot, J.J.J.M. Goumans, 1997-11-21. This book presents the proceedings of the 3rd International Conference on Waste Materials in Construction held in June 1997. The papers presented give the state of the art on leaching of materials and products, demonstration projects, and product development. Results of workshops on immobilisation and quality control are also presented. A good overview of the latest results on the application of various materials in construction based on both technical and environmental data is provided. The book provides a unique opportunity for environmental researchers, environmental consultants, policy makers, and those involved in the construction industry to gain the latest information on the subject. **Municipal Solid Waste Incinerator Residues** A.J. Chandler, T.T. Eighmy, O. Hjelm, D.S. Kosson, S.E. Sawell, J. Vehlow, H.A. van der Sloot, J. Hartlén, 1997-04-09. This text covers a broad spectrum of topics pertinent to the management of incinerator residues. Background information includes a history of incineration and the influence of municipal waste composition, incinerator type, air pollution control technologies on residue quality. Physical, chemical, and leaching characteristics for the various ash streams are described, along with recommended sampling and evaluation methodologies. Residue handling and management options, including treatment, utilisation, and disposal, are also discussed in detail. **Environmental Aspects of Construction with Waste Materials** Th.G. Aalbers, H.A. van der Sloot, J.J.J.M. Goumans, 1994-05-20. The concept of Sustainable Development, implicating the protection of soil and groundwater, the limitation of waste production, and the re-use of solid waste materials, is still the leading theme of WASCON 94. Although it is clearly recognized in most countries that products derived from solid waste materials can be applied as construction

materials research is still needed to assess various environmental problems

Natural Analogue Studies in the Geological Disposal of Radioactive Wastes W.M. Miller, N. Chapman, I. McKinley, R. Alexander, J.A.T. Smellie, 2011-08-18 The first purpose of this book is to provide a comprehensive review of the state of development of natural analogue studies with emphasis on those studies which are relevant to the following repository designs Nagra Switzerland disposal concepts for high level waste low and intermediate level waste SKB Sweden disposal concepts for spent fuel low and intermediate level waste and Nirex UK disposal concept for low and intermediate level waste The book's second aim is to discuss the expanding application of natural analogues for non performance assessment purposes especially their potential for presenting the concept of geological disposal to various interested audiences in a coherent understandable and scientifically legitimate manner Much of the discussion of the book is relevant to concepts for geological disposal of radioactive wastes by other countries and is concerned only with those physico chemical processes which control the release of radionuclides from the near field and their subsequent retardation and transport in the geosphere
