Energy and Cities John Byrne, Daniel Rich, The Politics of Energy Research and Development John Byrne, Daniel Rich, 1986-01-01 The Politics of Energy Research and Development examines and evaluates U S research and development policies to promote nuclear solar conservation and other technology options This volume is the third in the series Energy Policy Studies which explores fundamental long term social political and economic dimensions of energy technology resources and use Contributions represent a wide range of theoretical and policy perspectives including sociology economics political science urban and regional studies environmental analysis and history and philosophy of technology Contents Richard L Ottinger Introduction The Tragedy of U S Energy R Amor DEGREES B Lovins The Origins of the Nuclear Power Fiasco Richard T Sylves Nuclear Exotica Peaceful Use of Nuclear Explosives Eugene Frankel Technology Politics and Ideology The Vicissitudes of Federal Solar Energy Policy 1974 1983 Maxine Savitz The Federal Role in Conservation Research and Development J David Roessner Commercialization Issues in Energy Technology Policy John Byrne and Daniel Rich In Search of the Abundant Energy Machine and Grant P Thompson Energy Policy in the Interim Waiting for the Next Handbook of U.S. Environmental Policy David M.Konisky, 2020-04-24 A comprehensive analysis of Shoe to Drop diverse areas of scholarly research on U S environmental policy and politics this Handbook looks at the key ideas theoretical frameworks empirical findings and methodological approaches to the topic Leading environmental policy scholars emphasize areas of emerging research and opportunities for future enquiry

The Routledge Research Companion to Energy Geographies Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives However many aspects of the black box of relationships at the energy society interface remain unopened especially in terms of the spatial underpinnings of energy production and consumption within nations cities and regions Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world Providing an integrated perspective on the complex interdependencies between energy and geography The Routledge Research Companion to Energy Geographies offers a timely conceptual framework to study the multiple facets of energy geography including security space and place planning environmental science economics and political science Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment this book provides insights that will help move the international community toward greater cooperation stability and sustainability *Energy, Land and Public Policy* J. Barry Cullingworth, 2017-09-29 The development of alternative forms of energy supply since the mid 1970s has brought with it a range of new issues and concerns ranging from nuclear waste disposal to land use planning for energy efficiency This latest volume in the acclaimed Energy Policy Studies series brings together an interdisciplinary group of researchers to examine

the relationship between energy and planning policy with emphasis on urban and regional impacts Like other volumes in the series the articles included focus on the social political and economic dimensions of energy technology resources and use The emphasis on issues of technological scale resource allocation environmental impact and quality and urban and regional studies makes this a unique contribution to the literature Contents Creating Land Energy Transitions by Andrew F Huston U S Department of Housing and Urban Development Land Use Planning for Energy Efficiency by Susan E Owens Cambridge University Nuclear Waste Landscapes by Barry Solomon U S Energy Information Administration Economic Development Growth and Land Use Planning in Oil and Gas Producing Regions by Robert L Mansell University of Calgary The Land Use Focus of Energy Impacts by M J Pasqualetti Arizona State University Energy Use and Land Use by Stephen Lonergan McMaster University and a concluding essay by J Barry Cullingworth University of Delaware **Power Shapes Energy Transitions in Southeast Asia** Jens Marguardt, 2016-12-01 An understanding of the role of energy related governance systems and the conditions required for a shift towards renewables in developing countries is urgently needed in order to tap into the global potential of low carbon development Although renewable energy sources have become technically feasible and economically viable social and political factors continue to persist as the most critical obstacles for their dissemination How Power Shapes Energy Transitions in Southeast Asia conceptualizes power for the field of sustainable energy governance Based on empirical findings from the Philippines and Indonesia the book develops an analytical approach that incorporates power theory into a multi level governance framework The book begins with a profound background on renewable energy development around the world and presents major trends in development cooperation A power based multi level governance approach is introduced that is rooted in development thinking Examining how coordination and power relations shape the development and dissemination of renewable energy technologies the book also shows how decentralization affects low carbon development in emerging economies Sparking debate on the ways in which energy transitions can be triggered and sustained in developing countries this book will be of great interest to students and scholars of renewable energy development and environmental politics and governance as well as practitioners in development cooperation **Hydrogen Energy** Paul Ekins, 2010-08-12 Hydrogen could be a significant fuel of the future with the potential to make a major contribution to the resolution of pressing social and environmental problems such as carbon emissions energy security and local air pollution This book based on four years of detailed research subjects the promise and potential of hydrogen to searching in depth socio economic analysis It discusses the different technologies for the production distribution storage and use of hydrogen and analyses the economics of these technologies and their current market prospects It also describes various experiences with aspects of a hydrogen economy in two parts of the world the UK and Canada and then assesses the nature of different hydrogen futures that might develop depending on how the technology economics social acceptance and policy frameworks play out in different contexts The book ends by setting out the policy

drivers and levers which could stimulate a virtuous circle of research and development innovation and investment that might ultimately generate a sustainable hydrogen economy This is essential reading for economists engineers business leaders investors policy makers researchers and students who are interested in the future of the energy system and the part that **Policy Studies Review Annual**, 1980 Inventory of Energy Research and Development, hydrogen might play in it 1973-1975 Oak Ridge National Laboratory, 1976 **Network Governance and Energy Transitions in European Cities** Timea Nochta, 2020-10-12 This book investigates and evaluates the opportunities and limitations of network governance in building local capacity for energy infrastructure governance Presenting a comparative analysis of three city cases from across Europe Birmingham Frankfurt and Budapest this book demonstrates how local factors shape the prospect of network governance to support low carbon energy transitions It maps out existing governance networks highlighting the actors involved and their interactions with one another and also discusses the role and embeddedness of networks in the urban governance of low carbon energy Drawing on case study evidence Nochta develops a comparative analysis which discusses the intricate connections between network characteristics context and impact It highlights that organisational fragmentation the complexity of the low carbon energy problem and historical developments all influence network characteristics in terms of degree of integration and vertical hierarchical power relationships among network actors Overall the book concludes that understanding such links between context and networks is crucial when designing and implementing new governance models aimed at facilitating and governing low carbon urban development Low Carbon Energy Transitions in European Cities will be of great interest to scholars of energy policy urban governance and sustainability transitions Perspectives on Management Capacity Building Beth Walter Honadle, Arnold M. Howitt, 1986-01-01 Perspectives on Management Capacity Building provides a lively spectrum of views on the problems and prospects of improving the management and performance of municipal governments in the United States Leading specialists in public administration probe the management needs of local governments and explore ways in which they can improve their capacity to manage Today state and local governments are caught in the transition between the expansionism of the post World War II years and the retrenchment era of the late seventies and eighties Improved management capacity has emerged as the most effective way for local governments to ride out the economic and political pressures confronting them This book first investigates the meaning of the term management capacity It then considers how management needs have changed in the post war period and how these needs vary among large cities suburbs and rural communities Two of the contributions explore the organizational politics of management improvement while others look at the functional areas of computers and financial management The book also addresses human resource problems such as labor relations management development and training of municipal legislators and concludes with several viewpoints on federal efforts to improve local management capacity Smart Cities Negin Minaei, 2022-03-27 In the age of global climate change society will require cities that are environmentally self sufficient able

to withstand various environmental problems and recover quickly It is interesting to note that many smart solutions for cities are leading to an unsustainable future including further electrification an increased dependence on the Internet Internet of Things Big Data and Artificial Intelligence and basically any technology that leads us to consume more electricity This book examines critical topics in Smart Cities such as true sustainability and the resilience required for all cities It explores sustainability issues in agriculture and the role of agri technology for a sustainable future including a city s ability to locally produce food for its residents Features Discusses safety security data management and privacy issues in Smart Cities Examines the various emerging forms of transportation infrastructure and new vehicle technology Considers how energy efficiency can be achieved through behavioral change through specific building operations Smart Cities Critical Debates on Big Data Urban Development and Social Environmental Sustainability brings awareness to professionals working in the fields of environmental civil and transportation engineering urban planners and political leaders about different environmental aspects of Smart Cities and refocuses attention on critical urban infrastructure that will be necessary to respond to future challenges including climate change food insecurity natural hazards energy production and resilience Sustainable Cities and Communities Design Handbook Woodrow W. Clark II,2017-11-27 Sustainable Communities Design Handbook Green Engineering Architecture and Technology Second Edition brings together the major players responsible for sustainable development at both community and metropolitan scales The book aims to explain and demonstrate the practice planning design building and managing of the engineering architectural and economic development of cities and communities to meet sustainable development objectives Offering a holistic approach to creating sustainable communities the book includes a 40 percent increase in new methods and technology over the last edition and 50 percent more case studies from around the world to illustrate how common sustainability problems are solved As the concept and practices of a sustainable built environment have evolved over the years it is increasingly recognized that the scope should be expanded beyond individual buildings to the community scale Written by an international team of engineers architects and environmental experts this second edition includes new HVAC technologies for heating and cooling energy effect technologies for lighting and new construction materials which improve heating and cooling efficiencies This new edition will also include critical updates on international codes LEED BREEAM and Green Globes Explains the most cutting edge green technologies and methods for use in built communities Provides a common approach in using natural resources when building and designing green communities Features coverage of green practices from architecture to construction Covers compliance with various international codes methods and legal frameworks Advances in Building Energy Research Mat Santamouris, 2012-05-23 Several high quality scientific journals are published in the area of building energy and indoor outdoor environment however one has been missing Advances in Building Energy Research fills the gap I recommend ABER to all technical libraries research institutes and universities It should also be used by construction companies and those manufacturing building

materials and building products Professor Olli Sepp nen President of REHVA Federation of Heating and Air conditioning Associations Advances in Building Energy Research is a unique index It will be an inexhaustible resource for energy related sciences and a continuous inspiration for architects around the world N Fintikakis Architect and Director of UIA ARES WP Architecture and Renewable Energy Sources The collection of articles provides an encyclopaedic overview of the state of the art of the subject and they are written clearly and concisely This volume is a must for researchers and advanced students Professor Edward Ng Department of Architecture The Chinese University of Hong Kong This is a very valuable first volume of a new series with each section written by leaders in their respective fields Contributions cover a range of related topics and present evaluations of contemporary issues in building energy research that give the reader an immediate and clear insight Dr Adrian Pitts Senior Lecturer in Energy Environment and Sustainability University of SheffieldAdvances in Building Energy Research ABER offers state of the art information on the environmental science and performance of buildings linking new technologies and methodologies with the latest research on systems simulations and standards As stringently reviewed as a journal but with the breadth of a book this annual volume brings together invited contributions from the foremost international experts on energy efficiency and environmental quality of buildings Spanning a broad range of technical subjects this is a must have reference on global developments in the field suitable for architects and building engineers environmental engineers industry professionals students teachers and researchers in building science technical libraries and laboratories This first volume covers double skin fa ades artificial intelligence in buildings indoor thermal comfort and the progress of the adaptive approach heat island research and the effect of urban microclimate the use of techniques such as high dynamic range imaging and satellite remote sensing and vital management and monitoring approaches such as post occupancy evaluation Energy Abstracts for Policy Analysis, 1986 Electrification Pami Aalto, 2021-08-08 Electrification Accelerating the Energy Transition offers a widely applicable framework to delineate context sensitive pathways by which this transition can be accelerated and lists the types of processes and structures that may hinder progress towards this goal The framework draws insights from well established literature ranging from technological studies to socio technical studies of energy transitions on to strategic niche management approaches international political economy approaches and institutionalist literatures while also adopting wider social theoretical ideas from structuration theory Contributors discuss a multitude of case studies drawn from global examples of electrification projects Brief case studies and text boxes help users further understand this domain and the technological infrastructural and societal structures that may exercise significant powers Proposes a globally applicable inclusive framework linking together several literatures of energy transition research ranging from the social sciences to law and engineering Assesses the regional and national applicability of solutions covering the societal structures and interests that shape the prospects of their implementation Extends the analysis from technological and infrastructural solutions to the policies required to accelerate transition Introduces several country level case studies

thus demonstrating how to harness niches of innovation kick start the adoption of a solution and make it mainstream Germany's Energy Transition Carol Hager, Christoph H. Stefes, 2016-09-26 This book analyzes Germany's path breaking Energiewende the country's transition from an energy system based on fossil and nuclear fuels to a sustainable energy system based on renewables The authors explain Germany's commitment to a renewable energy transition on multiple levels of governance from the local to the European focusing on the sources of institutional change that made the transition possible They then place the German case in international context through comparative case studies of energy transitions in the USA China and Japan These chapters highlight the multifaceted challenges and the enormous potential in different paths to a sustainable energy future Taken together they tell the story of one of the most important political economic and social undertakings of our time Navigating the Complexities of Energy Transitions in East Asia Han Phoumin, Xunpeng Shi, Fukunari Kimura, 2025-04-25 This book brings together a series of expert analyses to unravel the multifaceted challenges and opportunities within the energy sectors of ASEAN and East Asian countries Distinct in its approach this volume presents a fusion of in depth theoretical analysis and current research allowing readers to explore various facets of energy transitions Contributions from leading experts on the energy implications of the Russia Ukraine War provide a rich academically rigorous exploration of the subject Designed for policymakers researchers academics and professionals in the energy sector the book maintains an advanced content level that is both intellectually stimulating and practically relevant It is also an invaluable resource for students in higher education pursuing studies in energy policy environmental economics and regional studies This book is a crucial reference for anyone seeking to deeply understand the theoretical underpinnings and future directions of energy transitions in ASEAN and East Asia Handbook of Energy Law in the Low-Carbon Transition Giuseppe Bellantuono, Lee Godden, Hanri Mostert, Hannah Wiseman, Hao Zhang, 2023-05-22 The low carbon transition is ongoing everywhere This Handbook written by a group of senior and junior scholars from six continents and nineteen countries explores the legal pathways of decarbonisation in the energy sector What emerges is a composite picture There are many roadblocks but also a lot of legal innovation The volume distils the legal knowledge which should help move forward the transition Questions addressed include the differences between the decarbonization strategies of developed and developing countries the pace of the transition the management of multi level governance systems the pros and cons of different policy instruments the planning of low carbon infrastructures the roles and meanings of energy justice The Handbook can be drawn upon by legal scholars to compare decarbonisation pathways in several jurisdictions Non legal scholars can find information to be included in transition theories and decarbonization scenarios Policymakers can discover contextual factors that should be taken into account when deciding how to support the transition
