Energy In Australia Politics Economics:

Energy Abstracts for Policy Analysis, 1989 Australia's Energy Transition Glen Currie, 2020-08-01 This book studies Australia a country characterized by the highest concentration of domestic photovoltaic systems In addition the high level of solar energy that Australia receives makes these systems a significant part of its energy mix International electricity system managers take note your systems are heading this way The energy transition is an emerging field and few texts have been published that can help energy planners as this book does The research presented is sociotechnical in nature and reveals that the main challenge in the energy transition is its emerging social role Very few works combine the social and technical fields of energy Given its scope the book will appeal to readers interested in policy regulation and energy systems including government employees involved in energy system management all around the world *Mathematical Economics of Multi-Level Optimisation* Sardar M.N. Islam, 2012-12-06 Since there exists a multi level policy making system in the market economies choices of decision makers at different levels should be considered explicitly in the formulation of sectoral plans and policies To support the hypothesis a theoretical energy planning approach is developed within the framework of the theory of economic policy planning policy systems analysis and multi level programming The Parametric Programming Search Algorithm has been developed On the basis of this theoretical model an Australian Energy Policy System Optimisation Model AEPSOM has been developed and is used to formulate an Australian multi level energy plan **Climate Politics And The Climate Movement In Australia** Verity Burgmann, Hans Baer, 2012-08-01 Climate change is the hottest topic of the twenty first century and the climate movement a significant global social movement This book examines the broad context of Australian climate politics and the place of the climate movement within it Acting from above are the most powerful forces corporations and governments both Labor and Coalition with the media framing the issues Climate movement actors in the middle include the Australian Greens major environmental and climate organisations think tanks academics public intellectuals and the union movement Acting from below are the numerous local climate action groups and various regional and national networks This lowest level is the primary location of the climate movement and grassroots mobilisation the source of its vitality To advocate a safe climate and climate justice the book ends by offering a vision for an alternative Australia based upon the principles of social equity and environmental sustainability **Energy Transition And Carbon Neutrality In Asean: Developing Carbon Capture, Utilization And Storage Technologies** Han Phoumin, Rabindra Nepal, 2024-09-10 This book combines the fundamental forces of technology economics finance and policy in understanding the development and deployment of CCUS to facilitate clean energy transition and therefore achieve carbon neutrality in the ASEAN It provides policy driven empirical studies investigating and evaluating multiple facets of development and deployment of CCUS in the ASEAN These carefully chosen case studies map CCUS in the regional and country specific policy framework of the ASEAN capture technological aspects of CCUS deployment by focussing on the existing and potential

industrial applications of CCUS as well as focus on the economics and financial dimensions of CCUS development and deployment This book on energy technology economics and policy is highly recommended for readers seeking an exploratory but robust overview on the recent empirical evidences of facilitating the development and deployment of CCUS with particular reference to the ASEAN and Asian economies including China *East Asia's Demand for Energy, Minerals and Food* Kate Barclay, Graeme Smith, 2016-02-05 China Japan and South Korea's international relations are shaped by the fact that all three countries are significant importers of resources This book brings together work on specific aspects of the politics of resources for each of these countries regionally and internationally There are some similarities in the approaches taken by all these three For example their development assistance shares a focus on infrastructure building and reluctance to purposefully influence domestic politics However there are also significant differences due in large part to the individual nature of the states as international actors China has significant domestic supplies of resources while Japan and Korea are net importers China's size also marks it out as different as does its state socialist history and continuing authoritarian state One of the key issues to understanding contemporary resource politics in Northeast Asia is that Western dominance of the world order is currently declining In some cases Northeast Asian approaches to resources are seen as being mercantilist In other cases Northeast Asian powers are seen as replacing Western powers in exploiting resource rich developing countries This book gives readers an informed view of this very important issue in contemporary international relations This book was published as a special issue of Asian Studies Review China's Energy Security Prachi Aggarwal, 2022-05-31 This book evaluates China's energy diplomacy across the globe and how it transcends the barriers to maintain both its security and its Chinese characteristics How China graduated from self sufficiency to Go out policy How will China's energy security evolve within the ambit of China's new normal For China its energy security has been of primary importance both domestically and internationally This book explores the foreign dimension The energy security in the Mao era was a necessity a policy in the Deng era and a strategy in the period henceforth The book identifies the evolution of China from a manufacturer to an investor that is its outbound direct investments in the energy field and the shift in its focus from traditional fuels to renewable energy sources It goes beyond the traditional choices of energy like West Asia and Africa and explore the lesser suppliers who could have a stronger say in the future to come The Political Economy of Coal Michael Jakob, Jan C. Steckel, 2022-02-01 This volume provides an overview of the political economy of coal in diverse country contexts Coal is the largest source of greenhouse gas emissions globally accounting for about 40 percent of energy related CO2 emissions Continued construction of coal fired power plants could make the climate targets of the Paris Agreement infeasible to achieve In spite of sharply declining costs for renewable energy sources many countries still heavily rely on coal to meet their energy demand The predominance of coal can only be adequately understood in light of the political factors that determine energy policy formulation To this end this edited volume assembles a wide variety of case studies exploring the political economy of

coal for across the globe These includes industrial and developing nations coal importers and exporters as well as countries that are either substantial coal users are just beginning to ramp up their capacities or have already initiated a coal phase out Importantly all case studies are structured along a unifying framework that focuses on the central actors driving energy policy formulation their main objectives as well as the context that determines to what extent they can influence policy making This large set of comparable studies will permit drawing conclusions regarding key similarities as well as differences driving coal use in different countries This book will be of great interest to students and scholars of energy climate change resource management and sustainable development It will also appeal to practitioners and policymakers involved in sustainable development The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
