Technology and the Future of Energy The Emirates Center for Strategic Studies and Research, 2013-11-19 Energy plays a key role in realizing sustainable development in both advanced and developing countries alike and it is therefore vital that investment in technological development be sustained in order to maximize the benefits of currently available energy resources However the question as to how that investment should be directed is a contentious one and involves numerous parallel questions relating to efficiency resource availability cost effectiveness and environmental impact among others Furthermore uncertainty remains as to the extent to which technological innovation can satisfy future global energy requirements regardless of the future energy balance The ECSSR 18th Annual Energy Conference Technology and the Future of Energy held at the Center on November 12-13 2012 and the resultant papers compiled in this volume provide a variety of informed views on current and future technological trends in the energy industry and their consequences for both producers and consumers They present a strategic outlook for technological development in the industry based on analysis of global energy supply and demand current and future investment trends in energy technology the potential impact of technological advances in the oil and gas industry and the viability of alternative energy technologies Also discussed are technological challenges and opportunities in energy intensive sectors in the oilproducing countries of the Arabian Gulf

European Energy Futures 2030 Timon Wehnert, Juan Pedro López Araguás, Oliviero Bernardini, Lukasz Jaworski, Birte Holst Jørgensen, Wolfram Jörß, Oliver Nielsen, Augusto Ninni, Anna Oniszk-Poplawska, Daniela Velte, 2007-04-27 Foresight is a vital prerequisite in order to bring our current energy system onto the path of sustainable development Which technologies

may be available in 25 years from now Which technologies will be needed in the future The European Energy Delphi project EurEnDel aimed at bringing orienting knowledge to these two questions Trying to show a glimpse of European Energy Futures in the year 2030 This book contains the main results of the EurEnDel project It includes the findings of the European Energy Delphi survey and the resulting recommendations for R D policy In comparison to other industry sectors energy has two very remarkable features For one transformations are very slow Life times of power plants are 30 years and longer Thus the decisions we take today will still have impacts 30 to 50 years from now which makes sound foresight so important On the other hand the energy system is strongly dependent on national political decisions Priority setting may change quite drastically with new parties coming to power at least for individual country This is one of the reasons why predictions in the energy field can be extremely difficult Combining these two characteristics it becomes evident why foresight in the energy field must not be restricted to an analysis of what the future could be like but must always assess what the future should be like This book tries to weave together these two traces which were inherent in the EurEnDel project
