Energy And World Politics:

Energy & World Politics Mason Willrich, 1978 From Simon Schuster Energy and World Politics is Mason Willrich's fascinating study as published under the auspices of The American Society of International Law As said by Walter C Clements Jr of Perspective Energy and World Politics offers a comprehensive and yet incisive introduction to the political economic and environmental aspects of global energy problems Global Energy Politics Thijs Van de Graaf, Benjamin K.

Sovacool, 2020-05-07 Ever since the Industrial Revolution energy has been a key driver of world politics From the oil crises of the 1970s to today's rapid expansion of renewable energy sources every shift in global energy patterns has important repercussions for international relations In this new book Thijs Van de Graaf and Benjamin Sovacool uncover the intricate ways in which our energy systems have shaped global outcomes in four key areas of world politics security the economy the environment and global justice Moving beyond the narrow geopolitical focus that has dominated much of the discussion on global energy politics they also deftly trace the connections between energy environmental politics and community activism The authors argue that we are on the cusp of a global energy shift that promises to be no less transformative for the pursuit of wealth and power in world politics than the historical shifts from wood to coal and from coal to oil This ongoing energy transformation will not only upend the global balance of power it could also fundamentally transfer political authority away from the nation state empowering citizens regions and local communities Global Energy Politics will be an essential resource for students of the social sciences grappling with the major energy issues of our times **Windfall** Meghan L.

Racing to the Top William R. Thompson,Leila Zakhirova,2018-11-08 In the international political economy of the last two millennia there tends to be one state leading the world as the foremost producer of energy and new technology In Racing to the Top William R Thompson and Leila Zakhirova argue that the US and China like previous leading countries rely on energy transition or the development of alternative energy in order to make new technology relatively inexpensive to develop and to fuel While the

US has historically held the lead its edge in the global energy economy appears to be eroding and as energy leadership diminishes so does the country's position in world politics Thompson and Zakhirova take a long view in order to show what will be necessary for a new power to emerge as the system leader then map a path forward for energy policy Informed by a deep knowledge of world history political economy and environmental technology this book is the first complete overview of energy transitions over the past thousand years

and related disciplines **Energy, the Modern State, and the American World System** George A. Gonzalez,2018-03-01
In this provocative and original study George A Gonzalez argues that the relationship between energy and the state as well as global politics has become more and more deeply intertwined reaching something of a crescendo with the global hegemony of Pax Americana in the twentieth and early twenty first centuries He presents a clear and concise case for viewing the modern state as the collaborative and affirmative union of capitalism and political authority in a setting where energy resources be it wind coal or oil provide the basis for the relatively inexpensive projection of political power More broadly energy serves as the foundation of the modern economy and because of this a prime function of the modern state is ensuring access to cheap reliable sources to power and grow the economy Historically energy is more of a zero sum resource than capital markets labor or technology and thus is a greater source of geopolitical tension and violence Energy politics and by extension international politics is moreover shaped by domestic corporate elites especially those within the United States

Global Governance on Renewable Energy Sybille

Roehrkasten,2015-06-17 Comparing Germany's and Brazil's government perspectives Sybille Roehrkasten reveals that the ideas on global renewable energy governance are highly contested In her study the author sheds light on the politics behind the definition of global governance issues focusing on two pioneers in the worldwide promotion of renewables and two decisive players in this emergent area of global cooperation She demonstrates that ideas about problems and solutions in transboundary policy making differ widely and that these differences are caused by the decision makers policy contexts and self interests The differences concern key aspects in global governance on renewables such as global challenges to be addressed favored renewables options barriers to renewables promotion and tasks for cooperation Energy Politics

Brenda Shaffer,2011-06-03 It is not uncommon to hear states and their leaders criticized for mixing oil and politics The U S led Iraq War was criticized as a war for oil When energy exporters overtly use energy as a tool to promote their foreign policy goals Europe and the United States regularly decry the use of energy as a weapon rather than accept it as a standard and legitimate tool of diplomacy In Energy Politics Brenda Shaffer argues that energy and politics are intrinsically linked Modern life from production of goods to means of travel and entertainment to methods of waging war is heavily dependent on access to energy A country's ability to acquire and use energy supplies crucially determines the state of its economy its national security and the quality and sustainability of its environment Energy supply can serve as a basis for regional cooperation but at the same time can serve as a source of conflict among energy seekers and between producers and consumers Shaffer provides a broad introduction to the ways in which energy affects domestic and regional political developments and foreign policy While previous scholarship has focused primarily on the politics surrounding oil Shaffer broadens her scope to include the increasingly important role of natural gas and alternative energy sources as well as emerging concerns such as climate change the global energy divide and the coordinated international policy making required to combat them Energy Politics concludes with examinations of how politics and energy interact in six of the world's largest producers and consumers of energy Russia Europe the United States China Iran and Saudi Arabia
