Energy Modelling Studies and Conservation Sam Stuart,2013-10-22
Energy Modelling Studies and Conservation documents the proceedings of seminar of the United Nations Economic Commission for Europe held in Washington D C on 24 28 March 1980 The volume begins with a Seminar Theme Paper that identifies background policy issues that lead to modeling discusses points of view involved in energy policy modeling defines the context of a set of energy conservation problems or questions being analyzed and provides a forward looking view of the subject and its problems This is followed by 54 papers that are organized into three main topics 1 energy models of major interest to individual countries 2 the interaction between energy conservation measures and the economy and 3 the international aspects of energy conservation models The papers on Topic 1 cover forecasting methodologies demand and conservation studies and electricity and supply studies The papers on Topic 2 present the experiences in countries such as Norway UK the USSR and US The papers on Topic 3 include studies on energy conservation policies in France Germany and Italy and the MARKAL multi period linear programming model for joint research and development in the field of new energy technologies of the 17 countries of the International Energy Agency **The Development of Renewable Energy Sources and its Significance for the Environment** Almas Heshmati,Shahrouz Abolhosseini,Jörn Altmann,2015-04-15 This book analyzes the effects of power generated by renewable energy sources renewable energy production technologies energy efficiency and market regulation of carbon emissions It elaborates on how these parameters have direct and indirect effects on carbon emission reduction such as the results of an environmental tax that could directly reduce carbon emissions by decreasing fossil fuel consumption or by stimulating energy savings through technological innovation as well as how renewable energy sources can affect both economic growth and the environment In addition to a detailed analysis of the interrelationships between renewable energy consumption production technology and market regulation The Development of Renewable Energy Sources and its Significance for the Environment proposes a model for measuring the effectiveness and results of the interaction between these links Furthermore a structure for a marketplace of renewable energy sources is put forward as well as an outline of the requirements that must be met in order for this market to function Suitable policy recommendations to enhance the market for renewable energies are also provided *The Economics and Econometrics of the Energy-Growth Nexus* Angeliki Menegaki,2018-03-29 The Economics and Econometrics of the Energy Growth Nexus recognizes that research in the energy growth nexus field is heterogeneous and controversial To make studies in the field as comparable as possible chapters cover aggregate energy and disaggregate energy consumption and single country and multiple country analysis As a foundational resource that helps researchers answer fundamental questions about their energy growth projects it combines theory and practice to classify and summarize the literature and explain the econometrics of the energy growth nexus The book provides order and guidance enabling researchers to feel confident that they are adhering to

and Alternative Energy Systems. Demand and Conservation Panel,1979 Economics of Industrial Ecology Jeroen C. J. M. van den Bergh,Marco Janssen,2004 Studies that integrate scientific technological and economic dimensions of industrial ecology and material flows The use of economic modeling techniques in industrial ecology research provides distinct advantages over the customary approach which focuses on the physical description of material flows The thirteen chapters of Economics of Industrial Ecology integrate the natural science and technological dimensions of industrial ecology with a rigorous economic approach and by doing so contribute to the advancement of this emerging field Using a variety of modeling techniques including econometric partial and general equilibrium and input output models and applying them to a wide range of materials economic sectors and countries these studies analyze the driving forces behind material flows and structural changes in order to offer guidance for economically and socially feasible policy solutions After a survey of concepts and relevant research that provides a useful background for the chapters that follow the book presents historical analyses of structural change from statistical and decomposition approaches a range of models that predict structural change on the national and regional scale under different policy scenarios two models that can be used to analyze waste management and recycling operations and adopting the perspective of local scale an analysis of the dynamics of eco industrial parks in Denmark and the Netherlands The book concludes with a discussion of the policy implications of an economic approach to industrial ecology Catalog of Copyright Entries, Fourth Series Library of Congress.
