Visions of Energy Futures Benjamin K.

Sovacool,2019-03-04 This book examines the visions fantasies frames discourses imaginaries and expectations associated with six state of the art energy systems nuclear power hydrogen fuel cells shale gas clean coal smart meters and electric vehicles playing a key role in current deliberations about low carbon energy supply and use Visions of Energy Futures Imagining and Innovating Low Carbon Transitions unveils what the future of energy systems could look like and how their meanings are produced often alongside moments of contestation Theoretically it analyzes these technological case studies with emerging concepts from various disciplines utopianism history of technology symbolic convergence communication studies technological frames social construction of technology discursive coalitions discourse analysis and linguistics sociotechnical imaginaries science and technology studies and the sociology of expectations innovation studies future studies It draws from these cases to create a synthetic set of dichotomies and frameworks for energy futures based on original data collected across two global epistemic communities nuclear physicists and hydrogen engineers and experts in Eastern Europe and the Nordic region stakeholders in South Africa and newspapers in the United Kingdom This book is motivated by the premise that tackling climate change via low carbon energy systems and practices is one of the most significant challenges of

the twenty first century and that success will require not only new energy technologies but also new ways of understanding language visions and discursive politics The discursive creation of the energy systems of tomorrow are propagated in polity hoping to be realized as the material fact of the future but processed in conflicting ways with underlying tensions as to how contemporary societies ought to be ordered This book will be essential reading for students and scholars of energy policy energy and environment and technology assessment *Energy Efficiency in Developing Countries* Suzana Tavares da Silva, Gabriela Prata Dias, 2020-02-05 This book presents a comparative analysis of energy efficiency policies in developing countries Although there is a vast amount of literature available about renewable energy policy and implementation in the developing world energy efficiency tends to lack attention This book fills this lacuna by examining the current state of the field and scope for future improvements Drawing on a wide range of case studies including Brazil China and Chile the authors use a comparative approach to examine the policies and programmes being implemented looking at the existing legal frameworks and regulatory challenges By showcasing stories of success as well as barriers to energy efficiency they highlight the opportunities for increased energy access and efficiency and demonstrate how these opportunities may directly impact on climate change mitigation This volume will be a useful resource for scholars and practitioners with an interest in energy policy and efficiency climate change and international development **The Future of Energy Use** Phil O'Keefe, Nicola Pearsall, Geoff O'Brien, 2010-02-09 Following the success of its predecessor this second edition of The Future of Energy Use provides essential analysis of the use of different forms of energy and their environmental and social impacts It examines conventional nuclear and renewable sources and technologies using relevant case studies and providing a vital link between technology and related policy issues The new edition has been comprehensively developed and updated including new text diagrams and tables with entire new sections that reflect the significant changes that have occurred since the first edition New material includes a stronger focus on climate change policy and energy security a discussion of the long run marginal costs of oil coverage of the biofuels debate in both the developed and developing worlds an outline of developments in the built environment including transport issues and the relationship between behaviour and energy use It reviews policy shifts with relation to energy efficiency carbon capture and storage combined heat and power and combined cycle gas turbines There is new coverage of nuclear waste storage and proliferation and new material on microgeneration and biofuels as well as essential new information on carbon markets and the hydrogen economy The result is a unique introduction and guide to all the vital issues within energy for students academics and professionals new to the field Viewing America's Energy Future in Three Dimensions L. Louis Hegedus, Dorota S. Temple, 2011-06-16 The future of the US energy infrastructure is a major and urgent challenge for our society This monograph was stimulated by a report of the National Academies Committee on America's Energy Future America's Energy Future Technology and Transformation Summary Edition 2009 The report pointed out the critical but poorly understood and little explored role of societal considerations in determining the fate of

national energy policies and programs In our efforts to respond to those concerns we have examined the thesis that the three major dimensions of the energy challenge technology economics and societal are overlapping interactive and inseparable therefore they can be understood only when considered simultaneously and discussed in terms of their interactions Correspondingly this monograph describes energy technologies in the context of their economic and societal contexts energy economics in their technological and societal contexts and the societal aspects of energy in their technological and economic contexts The monograph then identifies social science driven research opportunities pertaining to America s energy challenge with the hope that the proposed research will help not only overcome the societal barriers identified by the National Academies report but also harness societal forces in developing a rational energy future
