Energy In Latin America Production Consumption And Future Growth:

Energy in Latin America Kang Wu, Cynthia Obadía, 1995-01-24 What has happened in Latin America's energy sector since the early 1990s is a revolution. Roles of state energy companies, private investment and foreign capital are rapidly changing. This comprehensive study from the East West Center presents an in-depth analysis and realistic forecast of Latin America's energy growth and consumption of primary energy and petroleum products. It also explores relationships between Latin American producers and U.S. and international energy markets. Here is invaluable information for energy economists, policy makers, government regulatory officials, oil company executives and those interested in gaining an insight into the Latin American energy sector and its future. *Latin America & the Caribbean* Kevin Hillstrom, Laurie Collier

Hillstrom, 2003-12-02 A concise yet thorough overview of the environmental issues, problems and controversies facing Latin America and the Caribbean from the tip of South America to the Windward Islands. Home to Earth's longest mountain range, largest river and greatest rainforest, no region boasts greater geographic extremes, faces greater environmental dangers and enjoys more economic potential from its biodiversity than Latin America and the Caribbean. What are the political and economic factors affecting the Amazon's rapidly disappearing rainforest? What is being done to harvest life-saving drugs from the plants of the Orinoco? And what lies behind the mysterious disappearance of Central America's frogs? The work includes essays, tables and figures and an appendix titled International Environmental and Developmental Agencies, Organizations and Programs on the World Wide Web. *Latin America the Caribbean* examines a region waking up to its environmental problems and possibilities. **IBSS: Economics: 1995** Compiled by the British Library of Political and Economic Science at the

London School of Economics, 1996 The IBSS is the essential tool for librarians, university departments, research institutions and any public or private institutions whose work requires access to up-to-date and comprehensive knowledge of the social sciences. *The Journal of Energy and Development*, 1996 **Impacts of Large Dams: A Global Assessment** Cecilia

Tortajada, Dogan Altinbilek, Asit K. Biswas, 2012-02-02 One of the most controversial issues of the water sector in recent years has been the impacts of large dams. Proponents have claimed that such structures are essential to meet the increasing water demands of the world and that their overall societal benefits far outweigh the costs. In contrast, the opponents claim that social and environmental costs of large dams far exceed their benefits and that the era of construction of large dams is over. A major reason as to why there is no consensus on the overall benefits of large dams is because objective, authoritative and comprehensive evaluations of their impacts, especially ten or more years after their construction, are conspicuous by their absence. This book debates impartially, comprehensively and objectively the positive and negative impacts of large dams based on facts, figures and authoritative analyses. These in-depth case studies are expected to promote a healthy and balanced debate on the needs, impacts and relevance of large dams with case studies from Africa, Asia, Australia, Europe and Latin America. *Environmental Health Perspectives*, 1993 **Low-Carbon Energy in Africa and Latin America** Ricardo

Guerrero-Lemus, Les E. Shephard, 2017-03-08 This book offers a comprehensive overview of energy sectors in emerging African and Latin American nations providing a one stop source of information and analysis of energy sectors that differ radically from those of developed countries It focuses on how indigenous energy sources can be used within a systems framework to enhance each nation s economic prosperity secure their energy future and reduce global carbon emissions It begins by examining the current energy trends in Africa and Latin America and the constraints that current practices place on meeting future energy needs Further chapters present a deeper analyses of each technology adapted to these regions and a description of 94 selected case examples recently published in the scientific literature 2014 2016 and covering almost all countries to highlight energy experiences that could serve as engines for developing low carbon energy technologies across the two regions These issues are elucidated by a large number of illustrations and tables to offer valuable insights into the topics and technologies discussed The book enables students researchers and professionals in energy to better understand the energy context in Africa and Latin America and helps define strategies for supporting these regions in introducing low carbon energy technologies that supplement indigenous sources in a manner that enhances long term economic prosperity It is also intended for consulting companies and government agencies involved in the energy sector as well as environmental science and energy management students

Current Abstracts ,1995 **Energy 2000-2020: World Prospects and Regional Stresses** ,2012-12-06 In 1977 at the Xth World Energy Conference in Istanbul the Conservation Commission presented an initial global study of future trends in energy supply and demand up to 2020 This pioneering work was the origin of large scale global energy surveys At the Munich Conference of 1980 the Commission made more thorough analyses by concentrating particularly on the specific behaviour of Third World Nations Today in New Delhi in keeping with the tradition established by its previous surveys the Commission is developing a new global study the originality of which lies in the procedure adopted in its production Rejecting centralised forecasting models which have almost exclusively dominated the minds of researchers the Commission recommended a decentralised method of approach which was totally different both in its basic principles and in its implementation Essentially the inhabitants of the regions were to be given the opportunity of expressing their own views on their energy future rather than imposing on them an external model and therefore external results
