Proceedings of the Specialty Conference on Engineering and Construction Projects, 1982. The Client Role in Successful Construction Projects Jason

Challender, Russell Whitaker, 2019-05-08 The Client Role in Successful Construction Projects is a practical guide for clients on how to initiate, procure and manage construction projects and developments. This book is written from the perspective of the client initiating a construction project as part of a business venture and differs from most available construction literature which can externalise the client as a risk to be managed by the design team. The book provides a practical framework for new and novice clients undertaking construction, giving them a voice and enabling them to understand the challenges that they and the project are likely to face. Communicate and interact effectively with key stakeholders and professionals within the industry. Understand in straightforward terms where they can have a positive impact on the project. Put in place a client side due diligence process. Reduce their institutional risk and the risk of project failure. Discover how their standard models are able to co-exist and even transfer to a common client side procedure for managing a construction project. Written by clients for clients, this book is highly recommended not only for clients but for construction industry professionals who want to develop their own skills and enhance their working relationship with their clients. A supporting website for the book will be available which will give practical examples of the points illustrated in the book and practical advice from specialists in the field.

The New Engineering Contract Arthur McInnis, 2001 The introduction of the New Engineering Contract (NEC) encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form. The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract. It is believed that these features reduce adversariality and disputes. The NEC seeks to achieve this aim primarily through co-operative management techniques and incentives built into the NEC's procedures. This commentary analyses and evaluates these and related claims of innovation. The New Engineering Contract A legal commentary examines the background to the NEC, its design objectives, structure, procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development

management how the discipline has come to be what it is typically said to be how it has been constructed and the limitations of this traditional model Part 2 presents an enlarged view of the discipline and then deconstructs this into its principal elements Part 3 then reconstructs these elements to address the challenges facing society and the implications for the discipline in the years ahead A final section reprises the sweep of the discipline s development and summarises the principal insights from the book This thoughtful commentary on project and program and portfolio management as it has developed and has been practiced over the last 60 plus years and as it may be over the next 20 to 40 draws on examples from many industry sectors around the world It is a seminal work required reading for everyone interested in projects and their management *Department of the Interior and Related Agencies Appropriations for Fiscal Year 1992* United States.
