New Directions in the Management of Status Epilepticus Batool F. Kirmani,Ashok K. Shetty, Lee A. Shapiro,2019-02-06 Status Epilepticus SE is a neurological emergency and has high morbidity and mortality The International League Against Epilepsy ILAE recently updated their definition to specify that SE is a condition resulting either from the failure of the mechanisms responsible for seizure termination or from the initiation of mechanisms which lead to abnormally prolonged seizures Such phenomena can lead to long term neurological complications due to neuronal death glia neurological injury aberrant neuroplasticity oxidative stress and inflammation and alteration of neuronal networks Depending upon the type and duration of SE these mechanisms are quite variable Therefore in response

to the updated definition of SE novel avenues of research are required to address the specified involvement of the underlying mechanisms and pathophysiology resulting in the development of and outcomes from SE Improving the basic science understanding of SE will facilitate essential clinical trials One can envision such experiments to include device and compound based technological interventions directed at aborting the seizure activity and improving clinical outcomes Benzodiazepines remain one of the cornerstones of treatment and studies are underway to study new delivery options including intranasal buccal and intramuscular midazolam in addition to rectal diazepam with the goal of aborting the seizure activity outside the hospitals as rapidly as possible Approved and off label anticonvulsants such as phenytoin phenobarbital valproate topiramate levetiracetam lacosamide steroids immunosuppressants and neuroprotective compounds have also shown some efficacy at treating SE However substantial challenges remain in optimally managing SE and minimizing the short and long term complications Such difficulties can be overcome by innovative approaches targeting the underlying mechanisms of neuronal excitability glia neuronal death neuroplasticity oxidative stress inflammation and neuroinflammation **Excursions in**
