Engineering Trouble Biotechnology And Its Discontents:

Engineering Trouble Rachel A. Schurman, Dennis D. Kelso, 2003-10-06 Talk of genetically engineered organisms GEOs has moved from the hushed corridors of life science corporations to the front pages of major newspapers This book examines these issues from the diverse perspectives of sociology geography law environmental studies and political science

Applications of Recombinant DNA Technology Vance Hunter & Franky Strickland, 2018-09-20 Recombinant DNA technology is a technique which changes the phenotype of an organism host when a genetically altered vector is introduced and integrated into the genome of the organism So basically the process involves the introduction of a foreign piece of DNA structure into the genome which contains our gene of interest This gene which is introduced is the recombinant gene and the technique is called the recombinant DNA technology Inserting a desired gene into the genome of the host is not as easy as it sounds It involves the selection of the desired gene for administration into the host followed by a selection of the perfect vector with which the gene has to be integrated and recombinant DNA formed This recombinant DNA then has to be introduced into the host And at last it has to be maintained in the host and carried forward to the offsprings In molecular cloning a vector is a DNA molecule used as a vehicle to artificially carry foreign genetic material into another cell where it can be replicated and or expressed e g plasmid cosmic Lambda phages A vector containing foreign DNA is termed recombinant DNA The four major types of vectors are plasmids viral vectors cosmids and artificial chromosomes Of these the most commonly used vectors are plasmids Common to all engineered vectors are an origin of replication a multicloning site and a selectable marker Recombinant DNA Technology is focuses on the current state of knowledge on recombinant DNA technology and its applications The book will provide comprehensive knowledge on the principles and concepts of recombinant DNA technology or genetic engineering protein expression of cloned genes PCR amplification of DNA RFLP AFLP and DNA fingerprinting and finally the most recent siRNA technology It can be used by post graduate students studying and teachers teaching in the area of Molecular Biology Biotechnology Genetics Microbiology Life Science Pharmacy Agriculture and Basic Medical Sciences

Transforming Agriculture and Foodways David Goodman, 2024-09-10 A wave of innovation driven by the convergence of digital and molecular technologies is transforming food production and ways of eating in the US Western Europe and Australasia This book explores a range of contemporary agri food issues such as the digitalisation of farm production aka Precision Agriculture farmer independence gene editing alternative proteins and the rise of app based home food deliveries This is the first book to provide a systemic analysis of technological innovation and its socio economic consequences in modern food systems including the hollowing out of rural communities and pronounced industrial concentration The food system is under growing public pressure to respond to global climate change but this book finds little evidence of transition to sustainable low carbon trajectories

Food Security, Nutrition and Sustainability Geoffrey Lawrence, Kristen Lyons, Tabatha Wallington, 2013-10-18 As the threats of food insecurity loom ever larger the world faces the sad irony of food shortages in the global South alongside a purported obesity epidemic in the global North The twin issues of food production and food access are of particular concern in the context of climate change peak oil biofuels and land grabs by wealthy nations Food Security Nutrition and Sustainability offers critical insights by international scholars with chapters on global food security supermarket power new technologies and sustainability The book also assesses the contributions of diet and nutrition research in building socially just and environmentally sustainable food systems and provides policy recommendations to improve the health and environmental status of contemporary agri food systems The book features contributions from a range of social science perspectives including sociology anthropology public health and geography with case study material drawn from throughout the world

The Fight Over Food Wynne Wright, Gerad Middendorf, 2010-11

One problem with the food system is that price is the bottom line rather than having the bottom line be land stewardship an appreciation for the environmental and social value of small scale family farms or for organically grown produce Interview with farmer in Skagit County Washington For much of the later twentieth century food has been abundant and convenient for most residents of advanced industrial societies The luxury of taking the safety and dependability of food for granted pushed it to the back burner in the consciousness of many Increasingly however this once taken for granted food system is coming under question on issues such as the humane treatment of animals genetically engineered foods and social and environmental justice Many consumers are no longer content with buying into the mainstream commodity driven food market on which they once depended Resistance has emerged in diverse forms from protests at the opening of McDonald s restaurants worldwide to ever greater interest in alternatives such as CSAs community supported agriculture fair trade and organic foods The food system is increasingly becoming an arena of struggle that reflects larger changes in societal values and norms as expectations are moving beyond the desire for affordable convenient foods to a need for healthy and environmentally sound alternatives In this book leading scholars and scholar activists provide case studies that illuminate the complexities and contradictions that surround the emergence of a new day in agriculture The essays found in *The Fight Over Food* analyze and evaluate both the theoretical and historical contexts of the agrifood system and the ways in which trends of individual action and collective activity have led to an accumulation of resistance that greatly affects the mainstream market of food production The overarching theme that integrates the case studies is the idea of human agency and the ways in which people purposefully and creatively generate new forms of action or resistance to facilitate social changes within the structure of predominant cultural norms Together these studies examine whether these combined efforts will have the strength to create significant and enduring transformations in the food system

Evolution Made to Order Helen Anne, 2016-11-11

Plant breeders have long sought technologies to extend human control over nature Early in the twentieth century this led some to experiment with startlingly strange tools like x ray machines chromosome altering chemicals and radioactive elements Contemporary reports celebrated these mutation inducing methods as ways of generating variation in plants on demand Speeding up evolution they imagined would allow breeders to genetically engineer crops and flowers to order Creating a new food crop or garden flower would soon be as straightforward as innovating any other modern industrial product In *Evolution Made to Order* Helen Anne Curry traces the history of America s pursuit of tools that could intervene in evolution An immersive journey through the scientific and social worlds of midcentury genetics and plant breeding and a compelling exploration of American cultures of innovation *Evolution Made to Order* provides vital historical context for current worldwide ethical and policy debates over genetic engineering

chains Hybrid Nature Daniel Schneider, 2011 A history of the industrial ecosystem that focuses on the biological sewage treatment plant as an early example Biological sewage treatment like electricity power generation telephones and mass transit has been a key technology and a major part of the urban infrastructure since the late nineteenth century But sewage treatment plants are not only a ubiquitous component of the modern city they are also ecosystems a hybrid variety that incorporates elements of both nature and industry and embodies multiple contradictions In *Hybrid Nature* Daniel Schneider offers an environmental history of the biological sewage treatment plant in the United States and England viewing it as an early and influential example of an industrial ecosystem The sewage treatment plant relies on microorganisms and other plants and animals but differs from a natural ecosystem in the extent of human intervention in its creation and management Schneider explores the relationship between society and nature in the industrial ecosystem and the contradictions that define it the naturalization of industry versus the industrialization of nature the public interest versus private patented technology engineers versus bacterial and human labor and purification versus profits in the marketing of sewage fertilizer Schneider also describes biotechnology's direct connections to the history of sewage treatment and how genetic engineering is extending the reaches of the industrial ecosystem to such natural ecosystems as oceans rivers and forests In a conclusion that shows how industrial ecosystems continue to evolve Schneider discusses John Todd's *Living Machine* a natural purification method of sewage treatment as the embodiment of the contradictions of the industrial ecosystem

The International Handbook of Environmental Sociology M. R. Redclift, Graham Woodgate, 2010-01-01 Acclaim for the first edition The scope of the volume is vast and overall the Handbook amounts to an almost encyclopaedic reference text for scholars of environmental questions across the social sciences be they in sociology geography political science or wherever Neil Ward *Environmental Politics* Each author writes with a distinctive style yet the work flows well because the editors selected recognized scholars with outstanding credentials Academic libraries especially those serving a strong social science community will find this work a worthwhile addition Professors of sociology and environmental studies could use the essays for additional readings and reviews Marjorie H Jones *American Reference Books* This *International Handbook* is an important addition to the growing concern and publication in the field of environmental sociology Certainly any serious scholar in the field should find this edited reference work of interest John J Hartman *International Social Science Review* This thoroughly revised Handbook provides an assessment of the scope and content of environmental sociology and sets out the intellectual and practical challenges posed by the urgent need for policy and action to address accelerating environmental change More than a decade has passed since the first edition of the Handbook was published to considerable acclaim and environmental sociology has since become firmly established as a critical social science discipline This second edition is a major interdisciplinary reference work comprising more than 25 original essays authored by leading scholars many of whom are intimately involved in national regional or global environmental policy processes It marks some of the

changes and continuities in the field of environmental sociology and highlights today's substantive concerns and theoretical debates. The Handbook is divided into three parts covering concepts and theories, critical issues, and international perspectives, each with an introduction outlining the content of the constituent chapters and cross-referencing some of the more significant themes that link them together. Authoritative and comprehensive, this Handbook will prove to be essential reading for academics, researchers, and students across the social sciences who are interested in the environment. Soybeans and Power Pablo Lapegna, 2016-09-21. Although Argentina's use of genetically modified GM soybean seeds has spurred a major agricultural boom, it has also had a negative impact on many communities. In *Soybeans and Power*, Pablo Lapegna explores the ways in which these communities have coped with GM soybean expansion. Peasants initially resisted yet ultimately adapted to the new agricultural technologies, playing an active role in their own demobilization in order to maneuver the situation to their advantage. A rare glimpse into the life cycle of a social movement, *Soybeans and Power* gives voice to the communities most adversely affected by GM technology and the strategies that they have enacted in order to survive.

Seeds, Science, and Struggle Abby Kinchy, 2012-07-20. An examination of how advocates for alternative agriculture confront science-based regulation of genetically engineered crops. Genetic engineering has a wide range of cultural, economic, and ethical implications, yet it has become almost an article of faith that regulatory decisions about biotechnology be based only on evidence of specific quantifiable risks. To consider anything else is said to politicize regulation. In this study of social protest against genetically engineered food, Abby Kinchy turns the conventional argument on its head. Rather than consider politicization of the regulatory system, she takes a close look at the scientization of public debate about the contamination of crops resulting from pollen drift and seed mixing. Advocates of alternative agriculture confront the scientization of this debate by calling on international experts carrying out

their own research questioning regulatory science in court building alternative markets and demanding that their governments consider the social and economic impacts of the new technologies Kinchy focuses on social conflicts over canola in Canada and maize in Mexico drawing out their linkages to the global food system and international environmental governance The book ultimately demonstrates the shortcomings of dominant models of scientific risk governance which marginalize alternative visions of rural livelihoods and sustainable food production *Science by the People* Aya H. Kimura, Abby Kinchy, 2019-09-13 Longlisted for the Fleck Prize from the Society for Social Studies of Science 4S Citizen science research involving nonprofessionals in the research process has attracted both strong enthusiasts and detractors Many environmental professionals activists and scholars consider citizen science part of their toolkit for addressing environmental challenges Critics however contend that it represents a corporate takeover of scientific priorities In this timely book two sociologists move beyond this binary debate by analyzing the tensions and dilemmas that citizen science projects commonly face Key lessons are drawn from case studies where citizen scientists have investigated the impact of shale oil and gas nuclear power and genetically engineered crops These studies show that diverse citizen science projects face shared dilemmas relating to austerity pressures presumed boundaries between science and activism and difficulties moving between scales of environmental problems By unpacking the politics of citizen science this book aims to help people negotiate a complex political landscape and choose paths moving toward social change and environmental sustainability

Concentration and Power in the Food System Philip H. Howard, 2021-09-09 Who controls what we eat This book reveals how dominant corporations from the supermarket to the seed industry exert control over contemporary food systems It analyzes the strategies these firms are using to reshape society in order to further increase their power particularly in terms of their bearing upon the more vulnerable sections of society such as recent immigrants ethnic minorities and those of lower socioeconomic status Yet this study also shows that these trends are not inevitable Opposed by numerous efforts from microbreweries to seed saving networks it explores how opposition to this has encouraged even the most powerful firms to make small but positive changes This revised edition has been updated to reflect recent developments in the food system as well as the broad political economic forces that shape them It also examines the rapidly changing technologies such as Big Data and automation which have the potential to reinforce as well as to challenge the power of the largest firms The Routledge Handbook of Political Ecology Tom Perreault, Gavin Bridge, James McCarthy, 2015-06-12 The Routledge Handbook of Political Ecology presents a comprehensive and authoritative examination of the rapidly growing field of political ecology Located at the intersection of geography anthropology sociology and environmental history political ecology is one of the most vibrant and conceptually diverse fields of inquiry into nature society relations within the social sciences The Handbook serves as an essential guide to this rapidly evolving intellectual landscape With contributions from over 50 leading authors the Handbook presents a systematic overview of political ecology s origins practices and core concerns and aims to advance

both ongoing and emerging debates While there are numerous edited volumes textbooks and monographs under the heading political ecology these have tended to be relatively narrow in scope either as collections of empirically based mostly case study research on a given theme or broad overviews of the field aimed at undergraduate audiences The Routledge Handbook of Political Ecology is the first systematic comprehensive overview of the field With authors from North and South America Europe Australia and elsewhere the Handbook of Political Ecology provides a state of the art examination of political ecology addresses ongoing and emerging debates in this rapidly evolving field and charts new agendas for research policy and activism The Routledge Handbook of Political Ecology introduces political ecology as an interdisciplinary academic field By presenting a state of the art examination of the field it will serve as an invaluable resource for students and scholars It not only critically reviews the key debates in the field but develops them The Handbook will serve as an excellent resource for graduate and advanced undergraduate teaching and is a key reference text for geographers anthropologists sociologists environmental historians and others working in and around political ecology

Gray, 2008-04-01 The textile industry was one of the first manufacturing activities to become organized globally as mechanized production in Europe used cotton from the various colonies Africa the least developed of the world's major regions is now increasingly engaged in the production of this crop for the global market and debates about the pros and cons of this trend have intensified Hanging by a Thread Cotton Globalization and Poverty in Africa illuminates the connections between Africa and the global economy The editors offer a compelling set of linked studies that detail one aspect of the globalization process in Africa the cotton commodity chain From global policy debates to impacts on the natural environment to the economic and social implications of this process Hanging by a Thread explores cotton production in the postcolonial period from different disciplinary perspectives and in a range of national contexts This approach makes the globalization process palpable by detailing how changes at the macroeconomic level play out on the ground in the world's poorest region Hanging by a Thread offers new insights on the region in a global context and provides a critical perspective on current and future development policy for Africa Contributors Thomas J Bassett Jim Bingen Duncan Boughton Brian M Dowd Marnus Gouse Leslie C Gray Dolores Koenig Scott M Lacy William G Moseley Colin Poulton Bhavani Shankar Corinne Siaens Colin Thirtle David Tschirley and Quentin Wodon

Making Better Policies for Food Systems OECD, 2021-01-11 Food systems around the world face a triple challenge providing food security and nutrition for a growing global population supporting livelihoods for those working along the food supply chain and contributing to environmental sustainability Better policies hold tremendous promise for making progress in these domains

The Graft Hybrid Matthew Holmes, 2024-04-16 The global triumph of Mendelian genetics in the twentieth century was not a foregone conclusion thanks to the existence of graft hybrids These chimera plants and animals are created by grafting tissue from one organism to another with the goal of passing the newly hybridized genetic material on to their offspring But prevailing genetic theory insisted that heredity was

confined to the sex cells and there was no inheritance of characteristics acquired during an organism's lifetime. Under sustained attacks from geneticists, scientific belief in the existence of graft hybrids slowly began to decline. Yet ordinary horticulturalists and breeders continued to believe in the power of grafting. Matthew Holmes tells the story of these organisms which include multicolored chickens and black nightshades that grew tomatoes and their enduring influence on twentieth-century biology. Their creators sought a goal as ambitious as the wildest dreams of genetic engineering today to smash the barriers between species and freely exchange genes between organisms. *The Graft Hybrid* presents a greater understanding of the controversial history of graft hybrids, offering a crucial intervention in the history of genetics and the future of biological science. *Handbook on the Globalisation of Agriculture* Guy M. Robinson, Doris A. Carson, 2015-06-29. This Handbook provides insights to the ways in which globalisation is affecting the whole agri-food system from farms to the consumer. It covers themes including the physical basis of agriculture, the influence of trade policies, the nature of globalis-
