Engineering Problem Solving with ANSI C D. M. Etter, 1996 This work features a wide variety of real world applications of usable C code to solve problems in electrical computer mechanical civil and environmental engineering as well as the computer sciences It provides state of the art ANSI C programs showing top down design and stepwise refinement with the use of decomposition outlines and pseudocode The book features practical real world engineering and scientific examples and discusses numerical techniques that are commonly used in solving engineering problems The accompanying disk contains all the example programs and data files presented in the book

Engineering Problem Solving Milton C. Shaw, 2001-09-27 Engineering at its origins was a profession of problem solving The classic text Dialogues Concerning Two New Sciences by Galileo Galilei is revisited in this ambitious and comprehensive book by Milton Shaw In depth discussions of passages from the Galileo text emphasize the

mind set of engineering specifically the roles played by experimentation and dialog in analysis and creativity In the epilogue the author points out that engineering students are usually exposed to two types of faculty The first type is mathematically oriented and mostly interested in analytical solutions The second type is interested in devising and experimenting with innovative solutions However since many talented graduates move directly into teaching instead of gaining real world experience an imbalance of analytical teaching has occurred Shaw points out through an example by Dr Dave Lineback that learning to solve practical engineering problems is a very important part of an engineer s education but is often denied due to expense and time and effort required This book fills in many of the gaps in engineering education by showing students and professionals the historical background of problem solving Among those who will find this book particularly useful are engineers working in cross disciplinary capacities such as mechanical engineers working with electrical engineering concepts or polymeric materials engineers preparing for professional engineering exams mid career engineers looking to broaden their problem solving skills and students looking for help growing their skills

Engineering Problem Solving with C D. M. Etter,2005 **Engineering Problem Solving With A N S I** C D. M. Etter,1995-11-01 Engineering Problem Solving with ANSI C D. M. Etter,1995 Focusing on five major engineering scientific applications as examples this volume presents a design process for solving engineering problems and then develops corresponding solutions using ANSI C It considers the fundamental topics of control structures functions arrays character strings pointers and dynamic memory allocation presents a top down stepwise refined five step process for solving engineering and scientific problems with emphasis on readability and documentation in the development of programs discusses numerical techniques that are commonly used in solving engineering problems and develops a complete C program using the five step process An accompanying diskette contains all the example programs and data files used in the book

Geotechnical Problem Solving John C. Lommler,2012-04-02 Devised with a focus on problem solving *Geotechnical Problem Solving* bridges the gap between geotechnical and soil mechanics material covered in university Civil Engineering courses and the advanced topics required for practicing Civil Structural and Geotechnical engineers By giving newly qualified engineers the information needed to apply their extensive theoretical knowledge and informing more established practitioners of the latest developments this book enables readers to consider how to confidently approach problems having thought through the various options available Where various competing solutions are proposed the author systematically leads through each option weighing up the benefits and drawbacks of each to ensure the reader can approach and solve real world problems in a similar manner The scope of material covered includes a range of geotechnical topics such as soil classification soil stresses and strength and soil self weight settlement Shallow and deep foundations are analyzed including special articles on laterally loaded piles retaining structures including MSE and Tieback walls slope and trench stability for natural cut and fill slopes geotechnical uncertainty and geotechnical LRFD Load and Resistance Factor Design
