evidbasedgastro.com Portal Hypertension Almed Helmy, 2005 Advances in our knowledge of the pathogenesis and management of portal hypertension and its complications over the last 2 decades have been astronomical. However, most of the management strategies remain palliative and serve as a bridge to liver transplantation. Despite the availability of a number of books in the field of hepatology, portal hypertension as the main life-threatening complication needs a dedicated book to link between recent advances in research and current clinical practice. This book includes dedicated chapters on gastric varices management, ectopic varices management, sinusoidal obstruction syndrome, portal hypertensive bilopathy, portal hypertension as a risk factor in nonhepatic abdominal surgery, idiopathic portal hypertension, and portal hypertension in pregnancy. As all other chapters, they represent updates on the recent advances and were written by well-known experts in such areas. It also includes a self-assessment section for evaluation of the level of benefit obtained from reading this book. Many illustrations, tables, lists, algorithms, figures, and colour plates are included to serve the educational purpose of this book.

Portal Hypertension in the 21st Century R.J. Groszmann, J. Bosch, 2011-06-27
Portal hypertension is the most important complication of a great variety of both acute and chronic liver diseases. Nevertheless, hepatic cirrhosis is the most frequent cause of portal hypertension. Gastrointestinal bleeding due to rupture of oesophageal varices is without doubt the most severe complication of portal hypertension. At present, great advances are being made in the pathophysiology and in the development of new therapeutic tools for controlling and preventing this severe clinical event. This book contains the papers presented and discussed during the Symposium on Portal Hypertension in the 21st Century held in Montreal, Canada, in April 2004 and sponsored by Axcan Pharma Inc and NicOx S.A. There are eight sections covering basic mechanisms, new drugs, prevention, and current treatment of variceal bleeding, prevention of recurrent bleeding, and hepatic hemodynamic monitoring. An international faculty of authors have contributed chapters at an outstanding scientific level which will be vital reading for scientists and clinicians alike.
