New Approaches on Energy and the Environment Richard D. Professor Morgenstern,Paul Professor Portney,2010-09-30 Written by economists and policy analysts at Resources for the Future a Washington DC think tank with a tradition for independent objective research this collection of twenty five memos to the President offers constructive policy options for the elected administration on critical

challenges related to energy the environment and natural resources Each contributor to *New Approaches on Energy and the Environment* was asked to address the question Based on your research and knowledge what policy recommendation would you like to make to the next U S president Writing in advance of the 2004 election so as to keep their essays free of partisan interpretations the authors were asked not to confine their suggestions to what the prevailing wisdom says is politically possible They also took pains to make their ideas accessible to a busy president as well as a wide range of readers interested in a concise and authoritative overview of the nation s energy and environmental policy choices The results are provocative sometimes controversial but highly readable essays on topics including climate change oil dependency electricity regulation brownfields revitalization forest service administration air and water quality and environmental health issues such as food safety and the growing threat of antibiotic resistance When the President takes office in January 2005 he will confront competing perspectives about the priorities and approaches that should apply to energy and environmental policy Americans want cleaner air and water and healthy and attractive surroundings but they also want inexpensive fuel comfortable cars and houses and continued economic growth *New Approaches on Energy and the Environment* provides thought provoking commonsense contributions to debates about important energy and environmental issues confronting the U S today

Science Policy, Ethics, and Economic Methodology Kristin

Shrader-Frechette,2012-12-06 If indeed scientists and technologists especially economists set much of the agenda by which the future is played out and I think they do then the student of scientific methodology and public ethics has at least three options He can embrace certain scientific methods and the value they hold for social decisionmaking much as Milton Friedman has accepted neoclassical economics Or he can condemn them regardless of their value much as Stuart Hampshire has rejected risk cost benefit analysis RCBA Finally he can critically assess these scientific methods and attempt to provide solutions to the problems he has uncovered As a philosopher of science seeking the middle path between uncritical acceptance and extremist rejection of the economic methods used in policy analysis I have tried to avoid the charge of being anti science Fred Hapgood in response to my presentation at a recent Boston Colloquium for the Philosophy of Science said that my arguments felt like a call for rejection of the methods of risk cost benefit analysis Not so as Chapter Two of this volume should make eminently clear All my criticisms are constructive ones and the flaws in economic methodology which I address are uncovered for the purpose of suggesting means of making good techniques better Likewise although I criticize the economic methodology by which many technology assessments TAs and environmental impact analyses EIA s have been used to justify public projects it is wrong to conclude that I am anti technology Nuclear Safety ,1978 Energy ,1977

Green Accounting in Europe — Four case studies Anil Markandya,Marcella Pavan,2012-12-06 Conventional economic accounts which measure Gross National Product GNP and related indicators of national performance do not fully allow for the damages caused to the environment in the course of producing and

consuming goods and services Nor do they fully account for the fact that some resources are being depleted in achieving the living standards that we enjoy today This failure is important because policy makers are guided by the changes in macroeconomic indicators such as GNP Moreover such indicators are not a good guide to the sustainability of present practices of consumption and production This book provides practical estimates of one key area of neglect in the present national accounts the measurement of environmental damages The book sets out the methodology for making such estimates and then applies it to data from four countries Germany Italy The Netherlands and the UK The results show what can be achieved in the way of consistent damage estimates and what the key problems are
