Distorted Time Preferences and Structural Change in the Energy Industry Christoph Heinzl, 2009-05-07

The present study is a slightly revised version of my PhD thesis which was accepted at the Economics Department of Dresden University of Technology in July 2008 It has a long and a short history For it began as suggested theme as a fundamental evaluation of evolutionary economics for ecological economics asking especially for what the two elds actually constitutes and eventually relates In several years of unfruitful dwelling however neither of these two young non mainstream elds proved as constituted at a fundamental level as yet Rather ecological economics founded at the end of the 1980s as an attempt to combine social and natural s ence approaches in particular economics and ecology to study especially long run environmental problems in an encompassing manner has mainly developed into an interdisciplinary research forum on environmental economic issues Particularly uni ed by certain normative stances shared within its community it constitutes well understood a new discipline of its own right distinct from economics with its own scientific standards questions methodologies and institutions Baumgartner and Becker 2005 Modern evolutionary economics on the other hand has been a quarter of a century after its inception with Nelson and Winter 1982 still a mainly heterogeneous endeavor linked by a rather amorphous common interest in economic evolution and a critical stance towards neoclassical mainstream economics with a certain strength in applied studies on industrial dynamics Heinzl 2004 2006

Accelerating Clean Energy Technology Research, Development, and Deployment Patrick Avato, Jonathan Coony, 2008-06-10

Climate change is one of the key challenges of this century At the same time energy use the primary source of climate altering global greenhouse gas emissions is increasing at unprecedented rates and is vital to the continued economic growth of developing countries This poses a serious dilemma that can only be reconciled with new and improved clean energy technologies that balance climate change mitigation and increased energy needs in developing countries Despite a recent increase in investment public and private research development and deployment R D funding rates are well below historical levels In addition significant barriers impede the ability to develop new technologies such as the uncertain future value of CO₂ emissions intellectual property

rights issues limited incentives to commercialize technologies for developing countries and challenges with technology transfer These factors must be overcome to accelerate innovation in the energy sector To introduce new thinking to address these concerns this report examines four cases from outside the energy sector where creative approaches to R&D have successfully overcome similar barriers The case studies review approaches to innovation by the Consultative Group on International Agricultural Research Advanced Market Commitments for Vaccines the Human Genome Project and the concept of Distributed Innovation These case studies show how creative efforts can generate valuable public goods via i international partnerships between public and private actors ii information sharing and intellectual property rights and iii novel financing schemes
