Data Base Management: Theory and Applications Clyde Holsapple, A.B. Whinston, 2012-12-06 This volume is based on lectures presented at the N A T O Advanced Studies Institute on Data Base Management Theory and Applications The meeting took place in Estoril Portugal for a two week period in June 1981 The lecturers represented distinguished research centers in industry government and academia Lectures presented basic material in data base management as well as sharing recent developments in the field The participants were drawn from data processing groups in government industry and academia located in N A T O countries All participants had a common goal of learning about the exciting new developments in the field of data base management with the potential for application to their fields of interest In addition to formal lectures and the informal discussions among participants which are characteristic of N A T O AS gatherings participants had the opportunity for hands on experience in building application systems with a data base management system Participants were organized into groups that designed and implemented application systems using data base technology on micro computers The collection of papers is organized into four major sections The first section deals with various aspects of data modeling from the conceptual and logical perspectives These issues are crucial in the initial design of application systems

**Management Science** Samuel Eilon, 1995      **Energy Storage, Grid Integration, Energy Economics, and the Environment** Radian Belu, 2019-09-27 The book covers energy storage systems bioenergy and hydrogen economy grid integration of renewable energy systems distributed generation economic analysis and environmental impacts of renewable energy systems The overall approaches are interdisciplinary and comprehensive covering economic environmental and grid integration issues as well as the physical and engineering aspects Core issues discussed include mechanical electrical and thermal energy storage systems batteries fuel cells biomass and biofuels hydrogen economy distributed generation a brief presentation of microgrids and in depth discussions of economic analysis and methods of renewable energy systems environmental impacts life cycle analysis and energy conservation issues With several solved examples holistic material presentation in depth subject matter discussions and self content material presentation this textbook will appeal strongly to students and professional and nonprofessional readers who wish to understand this fascinating subject Readers are encouraged to solve the problems and questions which are useful ways to understand and apply the concepts and the topics included      *Transitions of Energy Regimes* Holger Berg, 2013 Transitions of energy regimes are phenomena that have profoundly affected economies and civilisations over the last 600 years The shifts from wood to coal from coal to oil and the potential change to another resource that might be pending now have influenced the ways in which we work produce and live Though they are fundamentally influenced and steered by economic forces these changes have seen little analysis from the viewpoint of economic theory This book seeks to contribute to filling this gap To this avail it firstly provides insight into the historical and present transitions that have taken place It then gives an overview of the existing economic approaches to

energy regime transitions and develops a new interpretation based on evolutionary economics For this an approach based on complexity theory and complex adaptive systems is created and applied and the mechanisms behind regime changes are interpreted according to this framework The analysis is supported by further research into certain aspects of transitions Historical and present research on resource depletion is compared the working of path dependence in the constitution and decline of the oil regime is analysed and the role of entrepreneurship in a regime change from the oil regime towards a potential renewable energy regime is investigated The book closes with an appraisal of energy regime transitions as a future field of research for evolutionary economics *Energy and the New Reality 2* L. D. Danny Harvey,2010-08-12 Transforming our energy supplies to be more sustainable is seen by many to be the biggest challenge of our times In this comprehensive textbook L D Danny Harvey sets out in unprecedented detail the path we must take to minimize the effects that the way we harness energy will have on future climate change The book opens by highlighting the importance of moving to low carbon technologies for generation then moves on to explain the functioning potential and social environmental issues around solar energy wind energy biomass energy geothermal energy hydroelectric power ocean energy nuclear energy It also covers the options for carbon capture and storage and the contexts in which low carbon energy can best be utilized potential for community integrated systems and the hydrogen economy The book closes with scenarios that combine the findings from its companion volume concerning the potential for limiting future energy demand with the findings from this volume concerning the cost and potential of C free energy systems to generate scenarios that succeed in limiting future atmospheric CO2 concentration to no more than 450 ppmv Detailed yet accessible meticulously researched and reviewed this work constitutes an indispensable textbook and reference for students and practitioners in sustainable energy and engineering

**Ecology, Sustainable Development and Accounting** Seleshi Sisaye,2015-08-11

Accounting literature has viewed sustainability in terms of social economic and environmental performances There have been concerns that the relationship between sustainability accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices Ecology Sustainable Development and Accounting argues that despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations Drawing examples from international development and federal government organizations this book documents the link between ecology corporate sustainable development and sustainability accounting and reporting It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature This book will be of particular interest to students academics and practitioners in the areas of environmental studies ecological economics sustainable development studies and social and environmental accounting The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature

**Nuclear Waste Management in a Globalised World** Urban Strandberg,Mats Andrén,2013-09-13

High level nuclear waste HLW is a controversial and risky issue For the next 100 years the HLW will be subject to policy decisions and value assessments Physically safe technologically stable and socio economically sustainable HLW management will top the agenda That must be accomplished in a society whose segments are both stable and in a rapid state of flux under the influence of global as well as national factors private interests as well as the vagaries of national politics Among the challenges to be faced is how to codify responsibilities of nuclear industry governments and international organisations and any adopted management policy must attain legitimacy at the local national regional and global levels All such considerations

raise questions about the practical and theoretical knowledge This special issue book will address these questions by exploring HLW management in Canada France Germany India Sweden the UK and the USA Special emphasis will be placed on highlighting national context current trends and uncertainties with relevance to a socially sustainable contemporary and future HLW management

*Simulation Modelling of a Shift to Service-Based Offerings* Raphael Wasserbaur, 2020-12-21

The unsustainable levels of resource use and emissions of our economies and their threat to future generations are core issues of our time The circular economy CE conceptualises a different type of economy that is restorative and regenerative by design and aims to keep products components and materials at their highest utility and value at all times distinguishing between technical and biological cycles The novelty of the CE requires the development of new analytical tools and methods as well as ways of thinking to understand its consequences This research summarises four years of research on the topic of systems analysis and simulation modelling in the domain of the CE Three topics were of major interest First what are the resource efficiency implications of a shift toward a CE Second what are the operational implications of a shift to a CE And finally how can systemic changes towards a CE be understood and planned Four studies were conducted addressing the three research questions The first study applies material flow analysis to a washing machine manufacturer case and looks at how different business models affect the resource flows of critical resources It finds that service based offerings lead to higher overall resource efficiency The second study focuses on the implications of CE initiatives on the maintenance activities of a heat as a service provider It shows that the shift to service based offerings requires service providers to face worse before better situations where long term benefits offset short term disadvantages The third study is a simulation based case study of laundry practices in Sweden It compares a sharing economy scenario where a population shares washing machines with a scenario where the majority of people own the washing machines they are using The results indicate that in Sweden and Europe in general sharing has significant resource savings potential in the domestic laundry sector The fourth study is a conceptualisation of design fixation to higher levels of analysis It identifies examples of fixations on the organisational and institutional level In addition it argues that in order to design sustainable sociotechnical systems aspects like governmental policies and business models need to be considered design parameters A shift to a CE needs to happen on many levels of society This research presents simulation models that can support corporate and political decision makers in the shift to a CE It shows that in order to understand the CE the analysis has to be on the one hand able to simulate system dynamics and on the other hand connect the multiple levels of society

methods used in the energy field with a knowledge based approach Reviews the history of methodologies used with ontologies and knowledge maps of examples Presents case studies showing both the techniques and achievements of modern methodologies Describes regional approaches in search of alternative energy resources aimed at reducing the use of fossil energy and enhancing the use of renewable energy *Rethinking the Environmental Impacts of Renewable Energy* Alexander Clarke, 2016-08-25 Renewable energy is important as a substitute for finite fossil fuels and inflexible nuclear power and could conceivably power the world However this is challenging as the world is currently 80% dependent on fossil fuels and renewable sources produce only about 15% of total energy Conversion technologies for use with many of the eight different primary sources of renewable energy are only just emerging as viable technologies While renewable energy sources will not run out and their use involves little or no release of carbon dioxide or ionising wastes they do have local environmental impacts of their own This book analyses the nature of environmental impacts from renewable sources A novel method of assessing impacts is explored based on a set of parameters centred on how diffuse or concentrated the energy flow is The approach that is developed will inform engineers designers policy makers and planners as well as researchers in the area *Energy, Environment and Transitional Green Growth in China* Ruizhi Pang, Xuejie Bai, Knox Lovell, 2018-04-27 This book discusses energy use and its environmental footprint in China as well as issues concerning the transitional green growth of its economy a subject of great importance in light of China's size and its impressive record of economic growth The book includes expert overviews and empirical studies prepared by internationally recognized experts in the field The empirical techniques utilized by the contributors include econometrics mathematical programming and index numbers The book will provide readers a deeper understanding of the energy and environmental issues China now faces during its transitional growth period and of the strategies available for resolving these issues The 2016 Asia Pacific Productivity Conference held in Nankai University Tianjin China from July 7-10 was organized by Nankai University's College of Economic and Social Development CESD in collaboration with the School of Economics Nankai University and Collaborative Innovation Center for China Economy The primary objective of the event was to highlight the latest developments in efficiency and productivity research *Climate Adaptation and Flood Risk in Coastal Cities* Jeroen Aerts, Wouter Botzen, Malcolm Bowman, Piet Dircke, Philip Ward, 2013-12-04 This book presents climate adaptation and flood risk problems and solutions in coastal cities including an independent investigation of adaptation paths and problems in Rotterdam New York and Jakarta The comparison draws out lessons that each city can learn from the others While the main focus is on coastal flooding cities are also affected by climate change in other ways including impacts that occur away from the coast The New York City Water Supply System for example stretches as far as 120 miles upstate and the New York City Department of Environmental Protection has undertaken extensive climate assessment not only for its coastal facilities but also for its upstate facilities which will be affected by rising temperatures droughts inland flooding and water quality changes The authors examine key

questions such as Are current city plans climate proof or do we need to finetune our ongoing investments Can we develop a flood proof subway system Can we develop new infrastructure in such a way that it serves flood protection housing and natural values      Energy: a Continuing Bibliography with Indexes ,1976      Risk Management Gerald Mars,David T. H. Weir,2019-04-08 First published in 2000 Risk Management is a two volume set comprised of the most significant and influential articles by the leading authorities in the studies of risk management The volumes includes a full length introduction from the editor an internationally recognized expert and provides an authoritative guide to the selection of essays chosen and to the wider field itself The collections of essays are both international and interdisciplinary in scope and provide an entry point for investigating the myriad of study within the discipline      **Management** ,1978      **Shaping Urban Infrastructures** Simon Guy,Simon Marvin,Will Medd,Timothy Moss,2012-06-25 Cities can only exist because of the highly developed systems which underlie them ensuring that energy clean water etc are moved efficiently from producer to user and that waste is removed The urgent need to make the way that these services are provided more environmentally socially and economically sustainable means that these systems are in a state of transition from centralized to decentralized energy from passive to smart infrastructure from toll free to road pricing Such transitions are widely studied in the context of the influence of service providers users and regulators Until now however relatively little attention has been given to the growing role of intermediaries in these systems These consist of institutions and organizations acting in between production and consumption for example NGOs who develop green energy labelling schemes in collaboration with producers and regulators to guide the user consultants who advise businesses on how to save resources and travel agents who match users with providers Such intermediaries are in a position to shape the direction that technological transitions take and ultimately the sustainability of urban networks This book presents the first authoritative collection of research and analysis of the intermediaries that underpin the transitions that are taking place within urban infrastructures showing how intermediaries emerge the role that they play in key sectors including energy water waste and building and what impact they have on the governance of urban socio technical networks      Engaging the Public with Climate Change Lorraine Whitmarsh,Irene Lorenzoni,Saffron O'Neill,2012-06-25 Despite increasing public awareness of climate change our behaviours relating to consumption and energy use remain largely unchanged This book answers the urgent call for effective engagement methods to foster sustainable lifestyles community action and social change Written by practitioners and academics the chapters combine theoretical perspectives with case studies and practical guidance examining what works and what doesn t and providing transferable lessons for future engagement approaches Showcasing innovative thought and approaches from around the world this book is essential reading for anyone working to foster real and lasting behavioural and social change
