Energy Syndrome The Comparing National Responses To The Energy:

Fuels Paradise John S. Duffield, 2015-06-15 Is the quest for true energy security a fool's errand? In recent years the efforts of nations to promote energy security have been hotly debated. *Fuels Paradise* examines how five major developed democracies—Britain, France, Germany, Japan, and the United States—have sought to enhance their energy security since the oil shocks of the 1970s and in response to the more diverse set of challenges of the early twenty-first century. Drawing on a vast range of primary and secondary sources, John S. Duffield explains the actions taken and not taken by these countries to address their energy security concerns. Throughout the book, Duffield argues that state strength and policy legacies are essential for understanding national responses to energy insecurity. In addition to identifying feasible energy policies and the constraints faced by policy makers, he evaluates the prospects for international cooperation to promote energy security and considers the implications of recent advances in the production and distribution of energy, particularly the fracking revolution. An ambitious cross-national and longitudinal study grounded in promising theories of national behavior, *Fuels Paradise* will contribute substantially to broader debates about the determinants of state action and public policy.

Ownership and Control of Oil Bianca Sarbu, 2014-05-09 *Ownership and Control of Oil* examines government decisions about how much control to exert over the petroleum industry, focusing on the role of National Oil Companies in the production of crude oil since the nationalizations in the 1970s. What are the motives for which some producing states opt for less and NOT more control of their oil production sector? When can International Oil Companies enter the upstream industry of producing states and under what conditions? The diversity of policy choices across producers provides the stage for this investigation; different theoretical explanations are confronted with the empirical evidence with the aim of finally proposing an interdisciplinary framework of analysis to explain who controls oil production around the world. This book is intended for both specialists and general readers who have an interest in the issue of government control of the petroleum industry. Due to its multidisciplinary approach, the book is aimed at a large academic public composed of scholars of Political Science, International Political Economy, Comparative Politics, and Middle East Area Studies. Moreover, this book should be relevant to international consultants, industry professionals, and decision makers in countries assessing their experience with existing control structures as well as the many countries in the process of joining the petroleum club of oil-producing nations.

Special Bibliography Series, 1957 *Energy Abstracts for Policy Analysis*, 1978 *Czars in the White House* Justin S. Vaughn, Jose D. Villalobos, 2015-06-02 When Barack Obama entered the White House, he followed a long-standing precedent for the development and implementation of major policies by appointing administrators, so-called policy czars, charged with directing the response to the nation's most pressing crises. Demonstrating that the creation of policy czars is a strategy for combating partisan polarization and navigating the federal government's complexity, Vaughn and Villalobos offer a sober empirical analysis of what precisely constitutes a czar and what role they have played in the modern presidency. **State**

and Environment Andreas Duit, 2014-06-06 Studies of environmental governance that show the relevance of the state's role in environmental politics and the analytical power of the comparative approach. Many recent studies on environmental governance focus on either the micro level (the local and the individual) or the macro level (the global) while neglecting governance at the nation-state level. State environmental governance is often perceived as inadequate, insufficient, or constrained by considerations of economic growth. And yet the impact of state environmental governance dwarfs that of the market or international organizations. This book of comparative studies documents the continuing relevance of the state in environmental politics and policy. The book also demonstrates the analytical power of the comparative approach to the study of environmental politics and policy, offering cross-national comparisons of environmental governance in both developed and developing countries. Some chapters are based on qualitative studies from a small number of countries; others offer statistical analyses of quantitative data from many more countries over a longer time period. Topics discussed include alternative approaches to estimating comparative environmental performance, citizens' shifting perceptions of their environmental responsibilities, U.S. and German wind policies, fisheries management in several African countries, and forestry conservation in Bolivia, Guatemala, and Peru. The studies illuminate such key issues as the effect of different political systems on the evolution of environmental policy regimes, why some countries seem to perform better than others in environmental matters, and the sociopolitical context of resource management.

Energy Policy and International Cooperation in Energy Di Wang, 2025-09-26 This book presents a scientifically rigorous methodology that

incorporates multidisciplinary multi dimensional multi agent and multi perspective approaches to energy policy and international energy cooperation It offers an in depth analysis of fundamental theories and conducts comprehensive research on the energy policies of ten major global producers and consumers Through a detailed examination the book explores the impact of these policies on international cooperation Key concepts include the exploration of foundational theories from a multidisciplinary perspective systematic analysis of energy policies within a five dimensional framework and the organization of typical cases of international energy cooperation The book highlights the roles of bilateral and multilateral alliances and examines the effects of energy policies through various dimensions such as legal regulations and fiscal tools By addressing these critical issues it provides valuable insights into the dynamic interplay between energy policy and international cooperation This book is essential for researchers scholars and policymakers in the field of energy studies It offers a scientific reference and policy recommendations for ensuring sustainable and efficient global energy cooperation Whether you are a seasoned expert or a newcomer to the field this book will enhance your understanding of the complexities of energy policy and international collaboration *Solar Energy, Technology Policy, and Institutional Values* Frank N.

Laird,2001-03-26 Energy policies that promote new technologies and energy sources are policies for the future They influence the shape of emergent technological systems and also condition our social political and economic lives *Solar Energy Technology Policy and Institutional Values* demonstrates the difficulties of deliberating such properties by providing a historical case study that analyses US renewable energy policy from the end of World War II through the energy crisis of the 1970s The book illuminates the ways beliefs and values come to dominate official problem frames and get entrenched in institutions In doing so it also explains why advocates of renewable energy have often faced ideological opposition and why policy makers fail to take them seriously **Energy and the Quality of Life** Clifford A. Hooker,Robert Macdonald,Robert van Hulst,Peter Victor,1981-12-15 As the supply cost crunch tightens issues related to energy become increasingly compelling This is a guide for the general public to the fossil fuel crisis facing Canada and Ontario in particular It is also about other long term matters of greater importance the economic socio political and cultural consequences of the choices which now have to be made primarily by governments The authors argue that energy policy is social policy Therefore our ideas about the kind of society we want must be a governing consideration in working out a policy to take Canada through the energy crisis The four writers bring to bear on the problem the perspectives of engineering philosophy environmental studies and economics The result is a balanced guide for the continuing debate on the adaptation of society to the imperatives of energy
