Engine Maintenance Systems Evaluation Users Guide:

Engine Maintenance Systems Evaluation (ENMASSE). A User's Guide, 2003 This report is a user's guide for the Engine Maintenance Systems Evaluation EnMasse EnMasse is a simulation model based on Extend software and used in the analysis of alternative Jet Engine Intermediate Maintenance JEIM policies The result of the policy analysis conducted using EnMasse is reported in a companion document Supporting Expeditionary Aerospace Forces Alternatives for Jet Engine Intermediate Maintenance MR 1431 AF 2002 The goal of the analysis was to evaluate several alternatives for accomplishing JEIM support Closely allied to maintenance policy are the maintenance structures within which these policies operate both in peace and war *Engine Maintenance Systems Evaluation (EnMasse)* Mahyar A. Amouzegar, 2000 The Engine Maintenance System Evaluation EnMasse assesses the effect of different policies such as centralization on jet engine intermediate maintenance This user's guide to EnMasse a simulation model developed by the authors describes the processes module shop test cell etc in the model Users can track the engine operation and maintenance process from the flightline through various shops and back The report delineates essential components of EnMasse that might be employed or modified to model various choices of engine types and maintenance policies *Evaluation of Options for Overseas Combat Support Basing* Mahyar A. Amouzegar, 2006 The ability of U S forces to provide swift and tailored responses to a multitude of threats across the globe is a crucial component of security in today's complex political environment To realize its goals of global strike and persistent dominance it is vital that the Air Force support the warfighter seamlessly and efficiently in all phases of deployment employment and redeployment One of the major pillars for achieving these objectives is a global combat support basing architecture This report presents an analytic framework and model for evaluating options for overseas combat support basing The authors develop several sets of deployment scenarios to measure the effect of timing location and intensity of operational requirements on combat support and to account for the inherent uncertainties in future planning They apply political geographical and vulnerability constraints to the model and present a feasible set of candidate locations for consideration by the Air Force **Supporting the Future Total Force** Kristin F. Lynch, 2007 Given manpower reductions in the active duty Air Force and availability of highly trained Air National Guard ANG personnel some missions could be transferred from the active component to the ANG without significant cost to the total force Portions of missions such as Predator operations and support air mobility command and control Commander of Air Force forces staffing and base level intermediate maintenance could benefit from ANG assignment Strategic Analysis of Air National Guard Combat Support and Reachback Functions Robert S. Tripp, 2006 VANGUARD is the Air National Guard ANG long range transformation program It calls for the ANG to evaluate new concepts prepare for new missions and adopt a new culture that capitalizes on ANG strengths and ensures that the ANG continues to add value as warfighters and to warfighters in the future while remaining ready reliable and accessible One way to support warfighting and warfighters is to continue to support the Air and

Space Expeditionary Force AEF a concept developed by the Air Force to allow quick response when appropriate to national security interests with a tailored sustainable force The ANG already plays an important role in the AEF during wartime operations This monograph evaluates options for Air National Guard combat support and reachback missions in four Air Force mission areas to support the AEF investigates transformational opportunities for the ANG that would add the most value in achieving the desired operational effects and considers how changes in unit and above unit policies are likely to affect Total Force capabilities It should be of interest to logisticians operators and mobility planners throughout the Department of Defense especially those in the Air National Guard and active Air Force

Supporting Air and Space Expeditionary Forces Ronald G. McGarvey, 2008 This monograph describes the new modeling approach developed to construct the CONUS CIRF network designs and presents detailed results from the specific analyses The analyses are based on F 15 F 16 and A 10 aircraft force structure bed downs resulting from the Defense Base Closure and Realignment Commission s 2005 recommendations For the three aircraft types all CONUS active duty bases Air National Guard ANG installations and Air Force Reserve Command AFRC installations possessing combat coded or training aircraft along with some Air Force Materiel Command AFMC bases were used as locations to be supported by CIRF networks CIRF network designs were constructed for aircraft engines TF34 F100 F110 electronic warfare EW pods ALQ 131 ALQ 184 Low Altitude Navigation and Targeting Infrared for Night LANTIRN navigation AN AAQ 13 and targeting pods AAQ 14s and F 15 avionics line replaceable units LRUs This set of commodities was chosen because previous analyses many of which were performed at RAND had suggested that they afforded the largest potential savings from consolidated maintenance Tasking scenarios considered in these analyses included normal peacetime training and readiness Air and Space Expeditionary Force AEF deployment taskings and major regional conflict MRC taskings

A Framework for Enhancing Airlift Planning and Execution Capabilities Within the Joint Expeditionary Movement System Robert S. Tripp, 2006 Recent operations have shed light on shortfalls in Air Force intratheater airlift Using an expanded strategies to tasks framework the authors assess current intratheater airlift processes organizations doctrine training and systems This report catalogues identified shortfalls and recommends options for improving the Theater Distribution System The authors recommend separation of supply demand and integrator roles and adoption of a closed loop planning and execution process

Sense and Respond Logistics Robert S. Tripp, Mahyar A. Amouzegar, Ronald G. McGarvey, 2006 This monograph discusses U S Air Force progress toward implementing sense and respond logistics or as defined more broadly sense and respond combat support It describes some of the research that has been conducted on the military combat support system focusing on improvements in prediction capability responsiveness of supply chains and a governing command and control system The report identifies the elements of sense and respond combat support and shows what is necessary to use the concept within the military specifically the Air Force It surveys the state of technology needed to implement the concept and identifies both the technical

work that needs to be further developed and the Air Force organization most appropriate to manage the implementation The capabilities described involve predicting what will be needed and responding quickly to anticipated or unanticipated needs The monograph points out the need for both predictive tools and responsive systems working together A key enabler of sense and response combat support is combat support command and control which involves joint development of a plan in which logistics process performance and resource levels are related to desired operational effects establishment of logistics process performance and resource level control parameters execution of the plan and tracking of control parameters against actual process performance and resource levels signaling process owners when their processes lie outside control limits and replanning logistics or operational components of the plan to mitigate the portions of the plan that are outside control limits
