Heywood,2006-01-24 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of  
knowledge has evolved in the field of engineering education over the years much of the published information has been  
restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the  
findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be  
more effective leaders and advocates in curriculum and research development The author s first objective is to provide an  
illustrative review of research and development in engineering education since 1960 His second objective is with the  
examples given to encourage the practice of classroom assessment and research and his third objective is to promote the  
idea of curriculum leadership The publication is divided into four main parts Part I demonstrates how the underpinnings of  
education history philosophy psychology sociology determine the aims and objectives of the curriculum and the curriculum s  
internal structure which integrates assessment content teaching and learning Part II focuses on the curriculum itself  
considering such key issues as content organization trends and change A chapter on interdisciplinary and integrated study  
and a chapter on project and problem based models of curriculum are included Part III examines problem solving creativity  
and design Part IV delves into teaching assessment and evaluation beginning with a chapter on the lecture cooperative  
learning and teamwork The book ends with a brief insightful forecast of the future of engineering education Because this is a  
practical tool and reference for engineers each chapter is self contained and may be read independently of the others Unlike  
other works in engineering education which are generally intended for educational researchers this publication is written not  
only for researchers in the field of engineering education but also for all engineers who teach All readers acquire a host of  
practical skills and knowledge in the fields of learning philosophy sociology and history as they specifically apply to the  
process of engineering curriculum improvement and evaluation      Proceedings of the International Conference on
