book is addressed to those engineering students who are prepared to work not to such as are content to refurbish existing designs without taking the trouble to understand the trains of thought and the considerations which are needed in true design work It is a well established fact that the beginner confronted by the simplest of design problems and lacking a pattern or model to suggest a solution loses his way in endless trial and error unless given positive guidance In this book therefore the author has drawn on his long teaching experience in an attempt to present in a readily understandable and systematic manner a methodical work plan which will enable the beginner practising design problems to reach his objective by a rational route This approach has the further advantage confirmed by experience that in adopting it the student will find his interest and pleasure in design work growing and his self confidence increasing Written with the requirements of general mechanical engineering in mind the book does not deal with the manufacturing methods typical of light precision engineering To prevent the book from taking on a size which would have detracted from its clear layout and obscured the main principles presented the numerical tables graphs etc available for reference in pocket books and textbooks have been omitted *Railway Electrical Engineer* ,1919 **Electrical Engineer of Australia & New Zealand** ,1927 ,
