need to do so that third time is lucky In this work a group of European and non European experts from different disciplines and approaches discuss the past and the present as well as the various possible futures of Genetically Modified Crops in the EU

Rethinking Invasion Ecologies from the Environmental Humanities Jodi Frawley,Iain McCalman,2014-02-24 Research from a humanist perspective has much to offer in interrogating the social and cultural ramifications of invasion ecologies The impossibility of securing national boundaries against accidental transfer and the unpredictable climatic changes of our time have introduced new dimensions and hazards to this old issue Written by a team of international scholars this book allows us to rethink the impact on national regional or local ecologies of the deliberate or accidental introduction of foreign species plant and animal Modern environmental approaches that treat nature with na ve realism or mobilize it as a moral absolute unaware or unwilling to accept that it is informed by specific cultural and temporal values are doomed to fail Instead this book shows that we need to understand the complex interactions of ecologies and societies in the past present and future over the Anthropocene in order to address problems of the global environmental crisis It demonstrates how humanistic methods and disciplines can be used to bring fresh clarity and perspective on this long vexed aspect of environmental thought and practice Students and researchers in

environmental studies invasion ecology conservation biology environmental ethics environmental history and environmental policy will welcome this major contribution to environmental humanities **Brave New World?** Celia

Deane-Drummond, 2003-11-01 One of the key issues facing us in the next millennium is the ability to manipulate the genetics of living organisms The possibility of manipulating human genetics raises many theological ethical and socio political issues These include specific decisions about whether the technology will be developed how it will be applied and more general questions about the technical manipulation of natural processes From a theological perspective the human genome project not only challenges particular doctrines such as that of creation eschatology and anthropology but also raises particular issues of social justice and medical ethics The purpose of this book is to bring together the collective expertise of theologians scientists and social scientists in order to provide a forum for critique and public debate focused on the human genome project It is hoped that the results presented in this book offer a sophisticated theological and ethical response

Eco-theology Celia Deane-Drummond, 2008 Concern for the environment has developed and intensified over the last few decades to the point where it now dominates much of our contemporary political landscape and culture In *Eco Theology* Celia Deane Drummond offers a comprehensive resource book for this burgeoning field of enquiry that highlights and seeks to evaluate the merits or otherwise of contemporary eco theologies She introduces the reader to critical debates in eco theology tracing trends from around the globe and key theological responses and encourages reflection and analysis through further reading sections at the end of each chapter and questions for discussion Publisher *Biblical Holism and Agriculture*

(*Revised Edition*) David J. Evans, Ronald J. Vos, Keith P. Wright, 2020-04-22 Because the World Matters New generations are championing responsibility for both the environment and those peoples who depend upon it in all new ways *Biblical Holism and Agriculture* addresses the urgent need for constructing a holistic perspective grounded in the Bible to appraise the economic social ecological environmental and spiritual impact of globalization and the unprecedented impact of powerful agricultural technologies and marketing systems The holistic biblical perspectives within reference ancient Hebrew insights about responsible freedom for keeping the land by people created in the image of God as representatives commissioned to stewardship and justice **Resurrection Science** M. R. O'Connor, 2015-09-15 A Library Journal Best Book of 2015 A

Christian Science Monitor Top Ten Book of September In a world dominated by people and rapid climate change species large and small are increasingly vulnerable to extinction In *Resurrection Science* journalist M R O Connor explores the extreme measures scientists are taking to try and save them from captive breeding and genetic management to de extinction Paradoxically the more we intervene to save species the less wild they often become In stories of sixteenth century galleon excavations panther tracking in Florida swamps ancient African rainforests Neanderthal tool making and cryogenic DNA banks O Connor investigates the philosophical questions of an age in which we play god with earth s biodiversity Each chapter in this beautifully written book focuses on a unique species from the charismatic northern white rhinoceros to the

infamous passenger pigeon and the people entwined in the animals fates Incorporating natural history and evolutionary biology with conversations with eminent ethicists O Connor s narrative goes to the heart of the human enterprise What should we preserve of wilderness as we hurtle toward a future in which technology is present in nearly every aspect of our lives How can we co exist with species when our existence and their survival appear to be pitted against one another *Safe Food* Marion Nestle,2003-03-25 Food safety is a matter of intense public concern and for good reason Millions of annual cases of food poisonings raise alarm not only about the food served in restaurants and fast food outlets but also about foods bought in supermarkets The introduction of genetically modified foods immediately dubbed Frankenfoods only adds to the general sense of unease Finally the events of September 11 2001 heightened fears by exposing the vulnerability of food and water supplies to attacks by bioterrorists How concerned should we be about such problems Who is responsible for preventing them Who benefits from ignoring them Who decides Marion Nestle author of the critically acclaimed *Food Politics* argues that ensuring safe food involves more than washing hands or cooking food to higher temperatures It involves politics When it comes to food safety billions of dollars are at stake and industry government and consumers collide over issues of values economics and political power and not always in the public interest Although the debates may appear to be about science Nestle maintains that they really are about control Who decides when a food is safe She demonstrates how powerful food industries oppose safety regulations deny accountability and blame consumers when something goes wrong and how century old laws for ensuring food safety no longer protect our food supply Accessible informed and even handed *Safe Food* is for anyone who cares how food is produced and wants to know more about the real issues underlying today s headlines

The Regulation of Agricultural Biotechnology Robert E. Evenson,V. Santaniello,2004-03-29 The regulatory systems in place prior to the development and expansion of agricultural biotechnology are still responding to this new form of technology Such systems include trade law intellectual property law contract law environmental regulations and biosafety regulations This book reviews these regulatory changes and consists of 24 chapters developed from papers presented at a conference of the International Consortium on Agricultural Biotechnology Research held in Italy in July 2002 It primarily considers the relationship between these changes and innovation market development and international trade
