Edge Of An Unfamiliar World A History Of Oceanography:

The Edge of an Unfamiliar World. A History of Oceanography. The Edge of an Unfamiliar World Susan SCHLEE,1975

A History of Oceanography Susan Schlee,1975 *Oceanographic History* Keith Rodney Benson,Philip F.

Rehbock,2002 From a study of knowledge of the sea among indigenous cultures in the South Seas to inquiries into the subject of sea monsters from studies of Pacific currents to descriptions of ocean going research vessels the sixty three essays presented here reflect the scientific complexity and richness of social relationships that characterize ocean ographic history Based on papers presented at the Fifth International Congress on the History of Oceanography held at the Scripps Institution of Oceanography the first ICHO meeting following the cessation of the Cold War the volume features an unusual breadth of contributions Oceanography itself involves the full spectrum of physical biological and earth sciences in their formal empirical and applied manifestations The contributors to *Oceanographic History The Pacific and Beyond* undertake the interdisciplinary task of telling the story of oceanography s past drawing on diverse methodologies Their essays explore the concepts techniques and technologies of oceanography as well as the social economic and institutional determinants of oceanographic history Although focused on the Pacific the geographic range of subjects is global and includes Micronesia East Africa and Antarctica the bathymetric range comprises inshore fisheries coral reefs and the azoic zone The seventy one contributors represent every continent of the globe except Antarctica bringing together material on the history of oceanography never before published **William Stimpson and the Golden Age of American Natural History** Ronald Scott Vasile,2018-06-19 William Stimpson was at the forefront of the American natural history community in the latter half of the nineteenth century Stimpson displayed an early affinity for the sea and natural history and after completing an apprenticeship with famed naturalist Louis Agassiz he became one of the first professionally trained naturalists in the United States In 1852 twenty year old Stimpson was appointed naturalist of the United States North Pacific Exploring Expedition where he collected and classified hundreds of marine animals Upon his return he joined renowned naturalist Spencer F Baird at the Smithsonian Institution to create its department of invertebrate zoology He also founded and led the irreverent and fun loving Megatherium Club which included many notable naturalists In 1865 Stimpson focused on turning the Chicago Academy of Sciences into one of the largest and most important museums in the country Tragically the museum was destroyed in the Great Chicago Fire of 1871 and Stimpson died of tuberculosis soon after before he could restore his scientific legacy This first ever biography of William Stimpson situates his work in the context of his time As one of few to collaborate with both Agassiz and Baird Stimpson s life provides insight into the men who shaped a generation of naturalists the last before intense specialization caused naturalists to give way to biologists Historians of science and general readers interested in biographies science and history will enjoy this compelling biography *The Great Ages of Discovery* Stephen J. Pyne,2021-02-23 For more than 600 years Western civilization has relied on exploration to learn about a wider world and

universe The Great Ages of Discovery details the different eras of Western exploration in terms of its locations its intellectual contexts the characteristic moral conflicts that underwrote encounters and the grand gestures that distill an age into its essence Historian and MacArthur Fellow Stephen J Pyne identifies three great ages of discovery in his fascinating new book The first age of discovery ranged from the early 15th to the early 18th century sketched out the contours of the globe aligned with the Renaissance and had for its grandest expression the circumnavigation of the world ocean The second age launched in the latter half of the 18th century spanning into the early 20th century carrying the Enlightenment along with it pairing especially with settler societies and had as its prize achievement the crossing of a continent The third age began after World War II and pivoting from Antarctica pushed into the deep oceans and interplanetary space Its grand gesture is Voyager s passage across the solar system Each age had in common a galvanic rivalry Spain and Portugal in the first age Britain and France followed by others in the second and the USSR and USA in the third With a deep and passionate knowledge of the history of Western exploration Pyne takes us on a journey across hundreds of years of geographic trekking The Great Ages of Discovery is an interpretive companion to what became Western civilization s quest narrative with the triumphs and tragedies that grand journey brought the legacies of which are still very much with us *SEA KNOWS NO BOUNDARIES* (cl) Helen M. Rozwadowski,2002 *The American Development of Biology* Ronald Rainger,Keith R. Benson,Jane Maienschein,2016-11-11 Selected as one of the Best Sci Tech Books of 1988 by Library Journal The essays in this volume represent original work to celebrate the centenary of the American Society of Zoologists They illustrate the impressive nature of historical scholarship that has subsequently focused on the development of biology in the United States *The Sea* Richard Hamblyn,2021-10-13 Sailing across time and geography the imaginary and the real The Sea chronicles the many physical and cultural meanings of the watery abyss This book explores the sea and its meanings from ancient myths to contemporary geopolitics from Atlantis to the Mediterranean migrant crisis Richard Hamblyn traces a cultural and geographical journey from estuary to abyss beginning with the topographies of the shoreline and ending with the likely futures of our maritime environments Along the way he considers the sea as a site of work and endurance of story and song of language leisure and longing By meditating on the sea as both a physical and a cultural presence the book shines new light on the sea and its indelible place in the human imagination *The Gulf Stream* Stan L. Ulanski,2008 An illustrated introduction to one of the Earth s great natural wonders explores the science and history of the sea highway known as the Gulf Stream and reveals how the Gulf Stream affects and is affected by every living thing that encounters it **Sky and Ocean Joined** Steven J. Dick,2003 As one of the oldest scientific institutions in the United States the US Naval Observatory has a rich and colourful history This volume is first and foremost a story of the relations between space time and navigation from the rise of the chronometer in the United States to the Global Positioning System of satellites for which the Naval Observatory provides the time to a billionth of a second per day It is a story of the history of technology in the form of

telescopes lenses detectors calculators clocks and computers over 170 years It describes how one scientific institution under government and military patronage has contributed through all the vagaries of history to almost two centuries of unparalleled progress in astronomy Sky and Ocean Joined will appeal to historians of science technology scientific institutions and American science as well as astronomers meteorologists and physicists Politics, Statistics and Weather Forecasting, 1840-1910 Aitor Anduaga,2019-07-12 Weather forecasting is the most visible branch of meteorology and has its modern roots in the nineteenth century when scientists redefined meteorology in the way weather forecasts were made developing maps of isobars or lines of equal atmospheric pressure as the main forecasting tool This book is the history of how weather forecasting was moulded and modelled by the processes of nation state building and statistics in the Western world

Science in the Early Twentieth Century Jacob Darwin Hamblin,2005-03-08 The first A Z resource on the history of science from 1900 to 1950 examining the dynamic between science and the social political and cultural forces of the era Though many books have highlighted the great scientific discoveries of the early 1900s few have tackled the wider context in which these milestones were achieved Science in the Early Twentieth Century covers everything from quantum physics to penicillin and more including all the major scientific developments of the period detailing not only the scientists and their work but also the social and political forces that dominated the scientific agenda Over 200 A Z entries chronicle the landmark scientific discoveries and personalities of the period including such scientific giants as Albert Einstein and Marie Curie Placing science firmly within its cultural context this thoroughly researched accessible resource takes a uniquely interdisciplinary approach making it an invaluable text for scientists educators students and the general reader Rachel Carson Linda Lear,2009-04-01 The authoritative biography of the marine biologist and nature writer whose book Silent Spring inspired the global environmentalist movement In a career that spanned from civil service to unlikely literary celebrity Rachel Carson became one of the world s seminal leaders in conservation The 1962 publication of her book Silent Spring was a watershed event that led to the banning of DDT and launched the modern environmental movement Growing up in poverty on a tiny Allegheny River farm Carson attended the Pennsylvania College for Women on a scholarship There she studied science and writing before taking a job with the newly emerging Fish and Wildlife Service In this definitive biography Linda Lear traces the evolution of Carson s private professional and public lives from the origins of her dedication to natural science to her invaluable service as a brilliant if reluctant reformer Drawing on unprecedented access to sources and interviews Lear masterfully explores the roots of Carson s powerful connection to the natural world crafting a fine portrait of the environmentalist as a human being Smithsonian Impressively researched and eminently readable Compelling not just for Carson devotees but for anyone concerned about the environment People A combination of meticulous scholarship and thoughtful often poignant writing Science A sweeping analytic first class biography of Rachel Carson Kirkus Reviews **The Sea, Volume 8: Deep-Sea Biology** Gilbert T. Rowe,1983-01-04 *Knowing Global Environments* Jeremy Vetter,2011

Knowing Global Environments brings together nine leading scholars whose work spans a variety of environmental and field sciences including archaeology agriculture botany climatology ecology evolutionary biology oceanography ornithology and tidology Collectively their essays explore the history of the field sciences through the lens of place practice and the production of scientific knowledge with a wide ranging perspective extending outwards from the local to regional national imperial and global scales The book also shows what the history of the field sciences can contribute to environmental history especially how knowledge in the field sciences has intersected with changing environments and addresses key present day problems related to sustainability such as global climate biodiversity oceans and more Contributors to Knowing Global Environments reveal how the field sciences have interacted with practical economic activities such as forestry agriculture and tourism as well as how the public has been involved in the field sciences as field assistants students and local collaborators

Deep-Sea Food Chains and the Global Carbon Cycle G.T. Rowe,Vita Pariente,2012-12-06 Carbon dioxide and other greenhouse gases are increasing in the atmosphere due to the burning of fossil fuels the destruction of rain forests etc leading to predictions of a gradual global warming which will perturb the global biosphere An important process which counters this trend toward potential climate change is the removal of carbon dioxide from the surface ocean by photosynthesis This process packages carbon in phytoplankton which enter the food chain or sink into the deep sea Their ultimate fate is a rain of organic debris out of the surface mixed layer of the ocean On a global scale the mechanisms and overall rate of this process are poorly known The authors of the 25 papers in this volume present their state of the art approaches to quantifying the mechanisms by which the rain of biogenic debris nourishes deep ocean life Prominent deep sea ecologists geochemists and modelers address relationships between data and models of carbon fluxes and food chains in the deep ocean An attempt is made to estimate the fate of carbon in the deep sea on a global scale by summing up the utilization of organic matter among all the populations of the abyssal biosphere Comparisons are made between these ecological approaches and estimates of geochemical fluxes based on sediment trapping one dimensional geochemical models and horizontal physical input from continental margins Planning interdisciplinary enterprises between geochemists and ecologists including new field programs are summarized in the final chapter The summary includes a list of the important gaps in understanding which must be addressed before the role of the deep sea biota in global scale processes can be put in perspective

Moby-Duck Donovan Hohn,2011-03-03 Selected by The New York Times Book Review as a Notable Book of the Year A revelatory tale of science adventure and modern myth When the writer Donovan Hohn heard of the mysterious loss of thousands of bath toys at sea he figured he would interview a few oceanographers talk to a few beachcombers and read up on Arctic science and geography But questions can be like ocean currents wade in too far and they carry you away Hohn s accidental odyssey pulls him into the secretive world of shipping conglomerates the daring work of Arctic researchers the lunatic risks of maverick sailors and the shadowy world of Chinese toy factories Moby Duck is a journey into the heart of

the sea and an adventure through science myth the global economy and some of the worst weather imaginable With each new discovery Hohn learns of another loose thread and with each successive chase he comes closer to understanding where his castaway quarry comes from and where it goes In the grand tradition of Tony Horwitz and David Quammen Moby Duck is a compulsively readable narrative of whimsy and curiosity

Neptune's Laboratory Antony Adler, 2019-11-19 An eyewitness to profound change affecting marine environments on the Newfoundland coast Antony Adler argues that the history of our relationship with the ocean lies as much in what we imagine as in what we discover We have long been fascinated with the oceans seeking to pierce the profundity of their depths In studying the history of marine science we also learn about ourselves Neptune's Laboratory explores the ways in which scientists politicians and the public have invoked ocean environments in imagining the fate of humanity and of the planet conjuring ideal world fantasies alongside fears of our species weakness and ultimate demise Oceans gained new prominence in the public imagination in the early nineteenth century as scientists plumbed the depths and marine fisheries were industrialized Concerns that fish stocks could be exhausted soon emerged In Europe these fears gave rise to internationalist aspirations as scientists sought to conduct research on an oceanwide scale and nations worked together to protect their fisheries The internationalist program for marine research waned during World War I only to be revived in the interwar period and again in the 1960s During the Cold War oceans were variously recast as battlefields post apocalyptic living spaces and utopian frontiers The ocean today has become a site of continuous observation and experiment as probes ride the ocean currents and autonomous and remotely operated vehicles peer into the abyss Embracing our fears fantasies and scientific investigations Antony Adler tells the story of our relationship with the seas

To Master the Boundless Sea Jason W. Smith, 2018-04-13 As the United States grew into an empire in the late nineteenth century notions like sea power derived not only from fleets bases and decisive battles but also from a scientific effort to understand and master the ocean environment Beginning in the early nineteenth century and concluding in the first years of the twentieth Jason W Smith tells the story of the rise of the U S Navy and the emergence of American ocean empire through its struggle to control nature In vividly told sketches of exploration naval officers war and most significantly the ocean environment Smith draws together insights from environmental maritime military and naval history and the history of science and cartography placing the U S Navy's scientific efforts within a broader cultural context By recasting and deepening our understanding of the U S Navy and the United States at sea Smith brings to the fore the overlooked work of naval hydrographers surveyors and cartographers In the nautical chart's soundings names symbols and embedded narratives Smith recounts the largely untold story of a young nation looking to extend its power over the boundless sea

Expeditions as Experiments Marianne Klemun, Ulrike Spring, 2016-10-18 This collection focuses on different expeditions and their role in the process of knowledge acquisition from the eighteenth century onwards It investigates various forms of scientific practice conducted during after and before expeditions and it places this discussion

into the scientific context of experiments In treating expeditions as experiments in a heuristic sense we also propose that the expedition is a variation on the laboratory in which different practices can be conducted and where the transformation of uncertain into certain knowledge is tested The experimental positioning of the expedition brings together an ensemble of techniques strategies material agents and social actors and illuminates the steps leading from observation to facts and documentation The chapters show the variety of scientific interests that motivated expeditions with their focus on natural history geology ichthyology botany zoology helminthology speleology physical anthropology oceanography meteorology and magnetism
