Educational Research Models For Analysis And Application:

Educational Research L. R. Gay, Peter W. Airasian, 2003 PHILOSOPHY AND PURPOSE This text is designed primarily for use in the introductory course in educational research that is a basic requirement for many graduate programs Since the topic coverage of the text is relatively comprehensive it also may be easily adapted for use in either a senior level undergraduate course or a more advanced graduate level course The philosophy that guided the development of the current and previous editions of this text was the conviction that an introductory research course should be more skill and application oriented than theory oriented Thus the purpose of this text is to have students become familiar with research mainly at a how to skill and application level The text does not mystify students with theoretical and statistical jargon It strives to provide a down to earth approach that helps students acquire the skills and knowledge required of a competent consumer and producer of educational research The emphasis is not just on what the student knows but also on what the student can do with what he or she knows It is recognized that being a good researcher involves more than the acquisition of skills and knowledge in any field significant research is usually produced by persons who through experience have acquired insights intuitions and strategies related to the research process Research of any worth however is rarely conducted in the absence of basic research skills and knowledge A basic assumption of this text is that there is considerable overlap in the competencies required of a competent consumer of research and a competent producer of research and that a person is in a much better position to evaluate the work of others after she or he has performed the major tasks involved in the research process ORGANIZATION AND STRATEGY The overall strategy of the text is to promote students attainment of a degree of expertise in research through the acquisition of knowledge and by involvement in actual research ORGANIZATION Part One discusses the scientific and disciplined inquiry approach and its application in education It describes the main steps in the research process and the purpose and methods of the various approaches to research In Part One each student selects and delineates a research problem of interest that has relevance to his or her professional area Throughout the rest of the text the student then simulates the procedures that would be followed in conducting a study designed to investigate the problem each chapter develops a specific skill or set of skills required for the execution of such a research study Specifically the student reviews and analyzes related literature and formulates hypotheses Chapter 2 develops a research plan Chapter 3 selects and defines samples Chapter 4 and evaluates and selects measuring instruments Chapter 5 Part Two describes qualitative research including the different approaches to and the collection and analysis of qualitative data Part Three describes and discusses quantitative research data collection and analysis including statistics In Part Four the student applies the skills and knowledge acquired in Parts One through Three and evaluates a research report STRATEGY This text represents more than just a textbook to be incorporated into a course it is actually a total instructional system that includes stated objectives or competencies instruction and procedures for evaluating each competency The instructional strategy of

the system emphasizes demonstration of skills and individualization within structure The format for each chapter is essentially the same Following a brief introduction each task to be performed is described Tasks require students to demonstrate that they can perform particular research functions Since each student works with a different problem each student demonstrates the competency required by a task as it applies to his or her own problem With the exception of Chapter 1 each chapter is directed toward the attainment of one task Each chapter begins with a list of chapter objectives that entail knowledge and skills that facilitate students abilities to perform a related task In many instances objectives may be assessed either as written exercises submitted by students or by tests whichever the instructor prefers For some objectives the first option is clearly preferable Text discussion is intended to be as simple and straightforward as possible Whenever feasible procedures are presented as a series of steps and concepts are explained in terms of illustrative examples In a number of cases relatively complex topics or topics beyond the scope of the text are presented at a very elementary level and students are directed to other sources for additional in depth discussion There is also a degree of intentional repetition a number of concepts are discussed in different contexts and from different perspectives Also at the risk of eliciting more than a few groans an attempt has been made to sprinkle the text with touches of humor Each chapter includes a detailed often lengthy summary with headings and subheadings directly paralleling those in the chapter The summaries are designed to facilitate both review and location of related text discussion Finally each chapter concludes with suggested criteria for evaluating its task and with an example of the task produced by a former introductory educational research student

MAJOR REVISIONS FOR THIS EDITION Like the sixth edition the seventh edition reflects a combination of both unsolicited and solicited input Positive feedback suggested aspects of the text and supplementary materials that should not be changed the writing style and the focus on ethical practice for example Every effort however was made to incorporate suggestions from users and nonusers For example several users requested an increased focus on qualitative research and an integration of SPSS analysis Content changes reflect the inclusion of new topics and the expansion or clarification of existing topics There are many improvements in this edition and we describe the more significant highlights here We have broadened our coverage of qualitative research throughout the text Four chapters now focus on qualitative research two new completely revised chapters Chapters 6 and 9 and two Chapters 7 and 8 expanded from the sixth edition Although the text still focuses mainly on quantitative research this edition provides a more balanced view of qualitative and quantitative research methods In Chapter 6 we describe and discuss the general characteristics and skills required to conduct qualitative research We identify four primary research approaches ethnography historical research grounded theory and action research The chapter then focuses on identifying research topics and reviewing the literature An overview of mixed method research is included to reflect its increasing use Chapter 7 focuses on data collection We begin by discussing how to identify and select study participants We then discuss collecting data using observations interviews and nonparticipant data collection methods

Chapter 8 has two topics First we discuss analyzing narrative research data both during and after the data collection stage of a study Second we focus on writing the final research report The chapter closes with a discussion of postanalysis considerations for qualitative research Chapter 9 expands the sixth edition s discussion of action research In it we discuss the benefits and nature of action research and describe in greater depth the processes specific to this type of research Throughout our discussion of both qualitative and quantitative research is guided by a commitment to ethical research practice and to the competencies required to carry out the basic steps common to educational research A discussion of mixed method research has been added to Chapter 6 We describe three different mixed method approaches and present criteria for identifying and evaluating them Our discussion of qualitative research is enhanced by the presentation of two published research reports new to this edition Throughout Chapters 6 7 and 8 we excerpt and annotate these reports and discuss how they illustrate specific aspects of qualitative research methods SPSS formerly Statistical Package for the Social Sciences is a comprehensive full featured software application for analyzing quantitative research data In Chapters 14 and 15 we illustrate our discussion of statistical data analysis by showing our calculations in two formats a step by step hand analysis and a computer analysis using SPSS Student Version 10 0 for Windows In addition we have added new tables and figures throughout the text Every chapter has been edited and updated References have been updated
