

GRADE 9 BASIC ELECTRICITY CONCEPTS

Concept	Description	Unit of Measurement	Example
Electric Charge	There are two types of electric charge: positive and negative. Like charges repel each other, while opposite charges attract each other.	Coulombs (C)	Rubbing a balloon on your hair creates static electricity due to the transfer of electrons from your hair to the balloon, resulting in a buildup of negative charge on the balloon.
Current	Electric current is measured in Amperes (A). It is a measure of the rate of flow of electric charge.	Amperes (A)	When you turn on a light bulb, the current flows through the wire, causing the bulb to light up.
Voltage	Voltage is the difference in electric potential energy between two points. It is measured in Volts (V).	Volts (V)	A battery supplies voltage to a circuit, causing current to flow and a device (like a motor) to operate.
Resistance	Resistance is the opposition to the flow of electric current in a circuit. It is measured in Ohms (Ω).	Ohms (Ω)	A resistor in a circuit limits the amount of current that can flow, protecting components from damage.
