Electrode Processes in Solid State Ionics M. Kleitz, J. Dupuy, 2012-12-06 The idea of an Advanced Study Institute on the theme of electrode reactions on solid electrolytes was put forward by Dr J Dupuy at the meeting of the International Society for Electrochemistry in Eindhoven in September 1973 Through Dr Dupuy the Solid State Physics Department of Lyons University offered the Institute possibilities of accommodation in Corsica that seemed particularly tempting The subject matter appealed to a number of people for a variety of reasons A great deal of development work on applications comes up against interface phenomena which appreciably reduce anticipated performances Numerous potential applications of specific electrodes or gauges appear that would benefit from a more systematic approach From a more fundamental viewpoint interface phenomena on ionic crystals are the subject of independent investigations in quite distinct research fields such as solid state physics and electrochemistry The choice of an interpretation from among the different models available is very often not a straightforward matter and an attempt to promote a synthesis by bringing together the proponents of the various schools could not fail to be rewarding

Electrode Processes in Solid State Ionics Dupuy, M. Kleitz, 1976 Solid State Batteries: Materials Design and Optimization Christian Julien, Gholam-Abbas Nazri, 2013-11-27 The field of solid state ionics is multidisciplinary in nature Chemists physicists electrochemists and engineers all are involved in the research and development of materials techniques and theoretical approaches This science is one of the great triumphs of the second part of the 20th century For nearly a century development of materials for solid state ionic technology has been restricted During the last two decades there have been remarkable advances more materials were discovered modern technologies were used for characterization and optimization of ionic conduction in solids trial and error approaches were deserted for defined predictions During the same period fundamental theories for ion conduction in solids appeared The large explosion of solid state ionic material science may be considered to be due to two other influences The first aspect is related to economy and connected with energy production storage and utilization There are basic problems in industrialized countries from the economical environmental political and technological points of view The possibility of storing a large amount of utilizable energy in a comparatively small volume would make a number of non conventional intermittent energy sources of practical convenience and cost The second aspect is related to huge increase in international relationships between researchers and exchanges of results make considerable progress between scientists one find many

Science and Technology of Fast Ion Conductors Harry L. Tuller, M. Balkanski, 2012-12-06 The rediscovery of fast ion conduction in solids in the 1960 s stimulated interest both in the scientific community in which the fundamentals of diffusion order disorder phenomena and crystal structure evaluation required re examination and in the technical community in which novel approaches to energy conversion and chemical sensing became possible with the introduction of the new field of Solid State Ionics Because of both the novelty and the vitality of this field it has grown rapidly in many directions This growth has included the discovery of many new crystalline fast ion conductors and the extension to the fields of organic and amorphous compounds The growth has involved the extension of classical diffusion theory in an attempt to account for carrier interactions and the development of sophisticated computer models Diffraction techniques have been refined to detect carrier distributions and anharmonic vibrations Similar advances in the application of other techniques such as NMR Raman IR and Impedance Spectroscopies to this field have also occurred The applications of fast ion conducting solid electrolytes have also developed in many directions High energy density Na S batteries are now reaching the last stages of development Li batteries are being implanted in humans for heart pacemakers and solid state fuel cells are again being considered for future power plants The proliferation of inexpensive microcomputers has stimulated the need for improved chemical sensors a major application now being the zirconia auto exhaust sensor being sold by the millions each year
