

A for Ama

Ama is starting to panic. She wants all As in geography, and the semesters paper on Kenya is almost due! Born in America, Ama knows little about her ancestors' homeland; she appeals to Cousin Jomo, which is very familiar with the Kenyan territory. When she asks, "Kenya help me?," he gives her the following information:

- Many Kenyans speak the swahili language.
- The Prime Meridian divides Kenya so that it lies in both the Northern and Southern Hemispheres.
- Tourist attractions both include the sandy beaches of the coast and the inland animal reserves.
- On the exotic safaris, of whom we hear so much, hunters are allowed to shoot only with cameras.

Jomo hopes he has been of assistance. How else can he help her.

"What I really want to know is how it feels to be in Kenya?" Ama says dreamily "I'm sure the morning sun is gorgeous as it rises over the South Atlantic Ocean!"

In order to complete her assignment, Ama is gathering information about the African country of Kenya.

"Well, if I was you," Jomo says, "I'd go along with Aunt Jessie when she visits our relatives this month."

"I'd love to," says Ama, waking up to reality, "but in geography, I want to get an A for 'awesome;' if I were in Kenya, I'd get an F for 'far away.'"

Copyright Office,1955 *A Primer on Semiconvex Functions in General Potential Theories* Kevin R. Payne,Davide Francesco Redaelli,2025-09-07 This book examines the symbiotic interplay between fully nonlinear elliptic partial differential equations and general potential theories of second order Starting with a self contained presentation of the classical theory of first and second order differentiability properties of convex functions it collects a wealth of results on how to treat second order differentiability in a pointwise manner for merely semicontinuous functions The exposition features an analysis of upper contact jets for semiconvex functions a proof of the equivalence of two crucial independently developed

lemmas of Jensen on the viscosity theory of PDEs and Slodkowski on pluripotential theory and a detailed description of the semiconvex approximation of upper semicontinuous functions The foundations of general potential theories are covered with a review of monotonicity and duality and the basic tools in the viscosity theory of generalized subharmonics culminating in an account of the monotonicity duality method for proving comparison principles The final section shows that the notion of semiconvexity extends naturally to manifolds A complete treatment of important background results such as Alexandrov's theorem and a Lipschitz version of Sard's lemma is provided in two appendices The book is aimed at a wide audience including professional mathematicians working in fully nonlinear PDEs as well as master's and doctoral students with an interest in mathematical analysis
