The German Energy Transition Thomas Unnerstall,2017-05-26 The book presents a comprehensive and systematic account of the concept the current status and the costs of the German energy transition the Energiewende Written by an insider who has been working in the German energy industry for over 20 years it follows a strictly non political neutral approach and clearly outlines the most relevant facts and figures In particular it describes the main impacts of the Energiewende on the German power system and Germany s national economy Furthermore it addresses questions that are of global interest with respect to energy transitions such as the cost to the national economy the financial burden on private households and companies and the actual effects on CO2 emissions The book also discusses what could have been done better in terms of planning and implementing the Energiewende and identifies important lessons for other countries that are considering a similar energy transition

Shocked: Electricity Price Volatility Spillovers in Europe Mr. Serhan Cevik,Yueshu Zhao,2025-01-10 European electricity markets are in the midst of unprecedented changes caused by Russia s invasion of Ukraine and the rise of renewable sources of energy Using high frequency data this paper investigates volatility spillovers across 24 countries in the European Union EU during the period 2014 2024 to provide a better understanding of the transmission of risks in an international context We develop both a static and a dynamic assessment of spillover effects and directional decomposition between individual countries Our main findings show that about 73 percent of the forecast error variation is explained by cross variance shares which means only 27 percent can be attributed to shocks within each country In other words cross border volatility spillovers dominate the behavior in national electricity markets in Europe and this effect has grown over time We also implement an augmented gravity model of bilateral volatility spillovers across power markets in the EU Altogether these results provide important insights to policymakers and regulators with regards to greater integration of electricity markets and infrastructure improvements that would also help with the transition to low carbon sources of power generation and strengthen energy security in Europe

The Urban Household Energy Transition Douglas F. Barnes,Kerry Krutilla,William F. Hyde,2010-09-30 As cities in developing countries grow and become more prosperous energy use shifts from fuelwood to fuels like charcoal kerosene and coal and ultimately to fuels such as liquid petroleum gas and electricity Energy use is not usually considered as a social issue Yet as this book demonstrates the movement away from traditional fuels has a strong socio economic dimension as poor people are the last to attain the benefits of using modern energy The result is that health risks from the continued use of wood fuel fall most heavily on the poor and indoor pollution from wood stoves has its greatest effect on women and children who cook and spend much more of their time indoors Barnes Krutilla and Hyde provide the first worldwide assessment of the energy transition as it occurs in urban households drawing upon data collected by the World Bank Energy Sector Management Assistance

Programme ESMAP From 1984 2000 the program conducted over 25 000 household energy surveys in 45 cities spanning 12 countries and 3 continents Additionally GIS mapping software was used to compile a biomass database of vegetation patterns surrounding 34 cities Using this rich set of geographic biological and socioeconomic data the authors describe problems and policy options associated with each stage in the energy transition The authors show how the poorest are most vulnerable to changes in energy markets and demonstrate how the collection of biomass fuel contributes to deforestation Their book serves as an important contribution to development studies and as a guide for policymakers hoping to encourage sustainable energy markets and an improved quality of life for growing urban populations

Narratives of Low-Carbon Transitions (Open

Access) Susanne Hanger-Kopp,Jenny Lieu,Alexandros Nikas,2019-02-21 This book examines the uncertainties underlying various strategies for a low carbon future Most prominently such strategies relate to transitions in the energy sector on both the supply and the demand side At the same time they interact with other sectors such as industrial production transport and building and ultimately require new behaviour patterns at household and individual levels Currently much research is available on the effectiveness of these strategies but in order to successfully implement comprehensive transition pathways it is crucial not only to understand the benefits but also the risks Filling this gap this volume provides an interdisciplinary conceptual framework to assess risks and uncertainties associated with low carbon policies and applies this consistently across 11 country cases from around the world illustrating alternative transition pathways in various contexts The cases are

presented as narratives drawing on stakeholder driven research efforts They showcase diverse empirical evidence reflecting the complex challenges to and potential negative consequences of such pathways Together they enable the reader to draw valuable lessons on the risks and uncertainties associated with choosing the envisaged transition pathways as well as ways to manage the implementation of these pathways and ultimately enable sustainable and lasting social and environmental effects This book will be of great interest to students scholars and practitioners of environmental and energy policy low carbon transitions renewable energy technologies climate change action and sustainability in general *Transitions* Peter W.

Newton,2008-09-09 Formidable challenges confront Australia and its human settlements the mega metro regions major and provincial cities coastal rural and remote towns The key drivers of change and major urban vulnerabilities have been identified and principal among them are resource constraints such as oil water food skilled labour and materials and carbon constraints linked to climate change and a need to transition to renewable energy both of which will strongly shape urban development this century *Transitions* identifies 21st century challenges to the resilience of Australia s cities and regions that flow from a range of global and local influences and offers a portfolio of solutions to these critical problems and vulnerabilities The solutions will require fundamental transitions in many instances to our urban infrastructures to our institutions and how they plan for the future and perhaps most of all to ourselves in terms of our lifestyles and consumption patterns With contributions from 92 researchers all leaders in their respective fields this book offers the expertise to chart pathways for a sustainability transition **Achieving a Just Transition to a Low-Carbon Economy** Raphael J

Heffron,2022-01-01 The ambition of most countries across the world is to develop a low carbon economy evidenced by the fact that the vast majority of countries have signed the Paris COP21 agreement This book contends that this global societal transition to a low carbon economy must be just As such it will be an invaluable and accessible reference for scholars from all research disciplines who aim in their research to see a fairer more equitable and inclusive world where sustainability is at the fore and climate targets are achieved This is the first in depth and original analysis to explore the central importance of law in achieving a just transition to a low carbon economy In addition it advances the JUST framework a unique framework for assessing the just transition This important research and theoretical tool provides a practical perspective as it ensures the geographical space and timelines of development are factored into analysis The research also provides analysis on the just transition movement around the world and the influence of international institutions Through several case studies on Just Transition Commissions and Critical Mineral Development the book details and demonstrates key elements of justice including distributive procedural restorative recognition and cosmopolitan justice It is clear from the analysis that while these are vast areas for analysis if applied in practice they all centrally contribute to ensuring society will advance in achieving a just transition to a low carbon economy **Republic of Serbia** International Monetary Fund.
