Hazardous Waste Disposal John P. Lehman, 2013-11-11 Putting together these Proceedings has afforded me the opportunity to re read the papers which were presented last October here in Washington In retrospect the 1981 NATO CCMS Symposium on Hazardous Waste Disposal maintains the impression of excellence expressed by the participants at the actual event The scope of the subject matter and quality of its presentation indicate that we did attain the Symposium's objective a comprehensive review of the international status of hazardous waste disposal It is my hope that in your own evaluation of these proceedings you will share my conviction that the Symposium conceived three years ago approved by the NATO CCMS Pilot Study experts in Oslo in October 1980 and taking place a year later was indeed worthwhile and that this record of its proceedings will be useful for many years to come John P Lehman Washington D C Editor June 1982 v CONTENTS OPENING REMARKS 1 Dr John W Hernandez Jr

Hazardous Waste Management Michalann Harthill, 2020-02-26 First published in 1994 as part of the AAAS Selected Symposia Series National strategies to minimize pollution including that from hazardous waste are evolving in both the United States and Canada Recent federal hazardous waste regulations in the United States promulgated under the authority of the Resource Conservation and Recovery Act of 1976 RCRA encourage the states to develop their own waste management programs patterned after federal specifications some states have developed progressive options Canadian hazardous waste management programs originate in the provinces However the federal government is increasingly involved in developing new treatment technologies guidelines for consistent management and control of waste across political boundaries The authors of this volume find that disposal is still the most common practice for handling hazardous waste in both countries despite the potential for alternative methods such as industrial process redesign for waste reduction waste detoxification recycling or incineration Nonetheless some waste will remain Sound disposal site

selection criteria are prerequisite for industry and government credibility in site selection Only after accountability is established and recognized will the public lose symptoms of the NIMBY not in my backyard syndrome Even so public involvement in site selection in these countries should be expected for a site to be accepted All the while the three parties industry government and the public must balance the risk of potential waste hazards with the cost of avoiding adverse effects
