Environmental Hazards and Disasters Bimal Kanti Paul,2011-11-30 Environmental Hazards and Disasters Contexts Perspectives and Management focuses on manifested threats to humans and their welfare as a result of natural disasters The book uses an integrative approach to address socio cultural political and physical components of the disaster process Human and social vulnerability as well as

risk to environmental hazards are explored within the comprehensive context of diverse natural hazards and disasters. In addition to scientific explanations of disastrous occurrences, people and governments of hazard-prone countries often have their own interpretations for why natural disasters occur. In such interpretations, they often either blame others in order to conceal their inability to protect themselves or they blame themselves, attributing the events to either real or imagined misdeeds. The book contains a chapter devoted to the neglected topic of such reactions and explanations. Includes chapters on key topics such as the application of GIS in hazard studies, resiliency, disasters and poverty, climate change and sustainability and development. This book is designed as a primary text for an interdisciplinary course on hazards for upper-level undergraduate and Graduate students. Although not targeted for an introductory hazards course, students in such a course may find it very useful as well. Additionally, emergency managers, planners, and both public and private organizations involved in disaster response and mitigation could benefit from this book, along with hazard researchers. It not only includes traditional and popular hazard topics, e.g., disaster cycles, disaster relief, and risk and vulnerability, it also includes neglected topics such as the positive impacts of disasters, disaster myths, and different accounts of disasters and disasters and gender.

Evolving Approaches to Understanding Natural Hazards Burrell E. Montz, Graham A. Tobin, 2015-10-05. The 21st century presents many challenges to the hazard manager: dynamic climatic conditions combined with population growth, rapid urbanization, and changing socio-economic relationships are reshaping disaster impacts, community responses, and social safety mechanisms. Indeed, human vulnerability is constantly restructured by the ongoing interplay of physical, social, economic, and political forces. At the same time, reducing vulnerability and enhancing community resilience require policies aimed at mitigating the consequences of disasters as they affect different locations and different groups, requiring sound, scientifically based research to further an understanding of the forces at play and to devise appropriate means to counter them. It is within this context that this book examines evolving approaches to natural hazards. Research into natural hazards has a long tradition, beginning with a focus on physical processes and evolving into an interdisciplinary agenda that incorporates interactions between the physical and human environments, embracing initiatives ranging from the physical to the socio-economic and political. It utilises various methodological approaches and technological advances, employing both quantitative and qualitative procedures. The papers included in this book offer insights into the development of applied hazards research as they build on previous work, evolving technologies, improved understandings of the factors involved, and increased awareness of the needs of those who manage hazards. This volume shows an appreciation for the foundation that has been set and will inspire future researchers as they look to address these very pressing social issues.

Teaching Humanities & Social Sciences Rob Gilbert, Libby Tudball, Peter Brett, 2019-10-17. Teaching Humanities and Social Sciences 7e prepares teachers to develop and implement programs in the humanities and social sciences learning area from F 10. It successfully blends theory with practical approaches to provide a basis for teaching that is engaging, inquiry based and relevant to students' lives. Using Version 8.1 of the Australian Curriculum the text discusses the new structure of the humanities and social sciences learning area. Chapters on history, geography, civics and citizenship and economics and business discuss the nature of these subjects and how to teach them to achieve the greatest benefit for students both as sub strands within the Year F 6-7 HASS subject and as distinct Year 7-10 subjects. Throughout the book maintains its highly respected philosophical and practical orientation including a commitment to deep learning in a context of critical inquiry. With the aid of this valuable text teachers can assist primary, middle and secondary students to become active and informed citizens who contribute to a just, democratic and sustainable future.

Managing Adaptation to Climate Risk Geoff O'Brien, Phil O'Keefe, 2013-07-24. Climate change is the single largest threat to the attainment of the Millennium Development Goals (MDGs) and sustainable development. Addressing climate risk is a challenge for all. This book calls for greater collaboration between climate communities and disaster development communities. In discussing this the book will evaluate the approaches used by each community to reduce the adverse effects of climate change. One area that offers some promise for bringing together these communities is through the concept of resilience. This term is increasingly used in each community to describe a process that embeds capacity to respond to and cope with disruptive events. This emphasizes an approach that is more focused on pre event planning and using strategies to build resilience to hazards in an adaptation framework. The book will conclude by evaluating the scope for a holistic approach where these communities can effectively contribute to building communities that are resilient to climate driven risks.
