The Oxford Handbook of the Archaeology of Diet Julia Lee-Thorp, M. Anne Katzenberg, 2024-06-24 Humans are unique among animals for the wide diversity of foods and food preparation techniques that are intertwined with regional cultural distinctions around the world The Oxford Handbook of the Archaeology of Diet explores evidence for human diet from our earliest ancestors through the dispersal of our species across the globe As populations expanded people encountered new plants and animals and learned how to exploit them for food and other resources Today globalization aside the results manifest in a wide array of traditional cuisines based on locally available indigenous and domesticated plants and animals How did this complexity emerge When did early hominins actively incorporate animal foods into their diets and later exploit marine and freshwater resources What were the effects of reliance on domesticated grains such as maize and rice on past populations and the health of individuals How did a domesticated plant like maize move from its place of origin to the northernmost regions where it can be grown Importantly how do we discover this information and what can be deduced about human health biology and cultural practices in the past and present Such questions are explored in thirty three chapters written by leading researchers in the study of human dietary adaptations The approaches encompass everything from information gleaned from comparisons with our nearest primate relatives tools used in procuring and preparing foods skeletal remains chemical or genetic indicators of diet and genetic variation and modern or historical ethnographic observations Examples are drawn from across the globe and information on the research methods used is embedded within each chapter The Handbook provides a comprehensive reference work for advanced undergraduate and graduate students and for professionals seeking authoritative essays on specific topics about diet in the human past

Biodiversity Change and Human Health Osvaldo E. Sala, Laura A. Meyerson, Camille Parmesan, 2012-09-26 Biodiversity Change and Human Health brings together leading experts from the natural science and social science realms as well as the medical community to explore the explicit linkages between human driven alterations of biodiversity and documented impacts of those changes on human health The book utilizes multidisciplinary approaches to explore and address the complex interplay between natural biodiversity and human health and well being The five parts examine health trade offs between competing uses of biodiversity highlighting synergistic situations in which conservation of natural biodiversity actually promotes human health and well being relationships between biodiversity and quality of life that have developed over ecological and evolutionary time the effects of changing biodiversity on provisioning of ecosystem services and how they have affected human health the role of biodiversity in the spread of infectious disease native biodiversity as a resource for traditional and modern medicine Biodiversity Change and Human Health synthesizes our current understanding and identifies major gaps in knowledge as it places all aspects of biodiversity and health interactions within a common framework Contributors explore potential points of

crossover among disciplines both in ways of thinking and of specific methodologies that could ultimately expand opportunities for humans to both live sustainably and enjoy a desirable quality of life Health Care and Cultural Change T. Kue Young, 1988 An analysis of health care among Indians in the central subarctic of Canada principally Ontario and Manitoba Based on an analysis of the interrelationships between health status medical care and social change proposes a broad strategy for improving the health of native peoples in Canada **Oceans and Human Health** Lora Fleming, Lota B. Climate Change and Human Health Scenario in South and Southeast Asia Rais Akhtar, 2016-04-20 This book is the first to present a regional analysis of climate change and human health focusing on geographically and socio economically distinct countries of South and Southeast Asia It has a major focus on India Indonesia Bangladesh Malaysia Thailand Nepal and Taiwan Climate change is a significant and emerging threat to human health It represents a range of environmental hazards and will affect populations in both the developed and developing countries In

particular it affects the regions where the current burden of climate sensitive diseases are high which is the case in South and Southeast Asian countries

Ageing, Wellbeing and Climate Change in the Arctic Paivi Naskali, Marjaana Seppänen, Shahnaj Begum, 2015-11-19 The Arctic and its unique natural resources have become objects of increasing concern. Rapid climate change and ageing of the population are transforming the living conditions in the region. This translates into an urgent need for information that will contribute to a better understanding of these issues. Ageing Wellbeing and Climate Change in the Arctic addresses the important intersection of ageing wellbeing and climate change in the Arctic region, making a key interdisciplinary contribution to an area of research on which little has been written and limited sources of information are currently available. The book explores three key areas of discussion. First, various political issues that are currently affecting the Arctic, such as the social categorisation of elderly people. Second, the living conditions of the elderly in relation to Arctic climate change. Third, the wellbeing of elderly people in terms of traditional knowledge and lifestyles. The book also features contributions from a number of key researchers in the field which examine a broad range of case studies, including the impact of climate change on health in Lapland and elderly people and geographical mobility in Norway. This book will be of great interest to scholars of climate change, gerontology and social policy.

Extreme Weather, Health, and Communities Sheila Lakshmi Steinberg, William A. Sprigg, 2016-04-20 This volume presents a unique interdisciplinary approach drawing on expertise in both the natural and social sciences. A primary goal is to present a scientific and socially integrated perspective on place-based community engagement, extreme weather and health. Each year, extreme weather is leading to natural disasters around the world and exerting huge social and health costs. The International Monetary Fund 2012 estimates that since 2010, 700 worldwide natural disasters have affected more than 450 million people around the globe. The best coping strategy for extreme weather and environmental change is a strong offense. Communities armed with a spatial understanding of their resources, risks, strengths, weaknesses, community capabilities and social networks will have the best chance of reducing losses and achieving a better outcome when extreme weather and disaster strikes.

Caregiving on the Periphery Myra Rutherdale, 2010 Fascinating stories of the unconventional work of nurses and midwives in Canada.

Climate Change and Human Health Scenarios Rais Akhtar, 2024-01-01 The objective of the present edited book is to encompass studies from both developed and developing countries of Asia, Africa, Europe and Americas to understand and present a comparative scenario of the climate change and other environmental determinants of health and disease in geographically diversified countries. Environment and health perspective dates back to Hippocrates' treatise written 400 B.C. In his book *On Airs, Waters and Places*, Hippocrates described diseases as associated with environmental conditions. Whoever wishes to investigate medicine properly should proceed thus: in the first place to consider the seasons of the year and what effects each of them produces for they are not at all alike but differ much from themselves in regard to their changes. Then the winds, the hot and the cold, especially such as are common to all countries and then such as are peculiar to

each locality We must also consider the qualities of the waters for as they differ from one another in taste and weight so also do they differ much in their qualities In the same manner when one comes into a city to which he is a stranger he ought to consider its situation how it lies as to the winds and the rising of the sun for its influence is not the same whether it lies to the north or the south to the rising or to the setting sun There has been a greater emphasis in the last four decades on understanding environmental factors which affect human health after United Nations established Intergovernmental Panel on Climate Change IPCC in 1988 aimed at to evaluate research on changing environmental condition particularly climate change and its impacts on human wellbeing including human health as consequences of extreme heat waves conditions sea level rise forced migration air pollution droughts and wildfires From these studies risk levels of vulnerable populations and regions can be assessed and level of resilience of healthcare infrastructure that may be used in environmental health policy and equity of these countries

The Health of Native Americans T. Kue Young, 1994 The etiology and pathogenesis of different diseases are discussed and genetic and environmental risk factors are considered The book also compares the incidence of disease among Native Americans and non Native Americans examines variations among Native Americans belonging to different geographical cultural and linguistic groups and reviews control and prevention strategies On a broader level the purpose of this book is to integrate the approaches of anthropology and epidemiology in order to demonstrate the interaction of biology and culture on disease causation distribution and control

One Health Case Studies: Addressing Complex Problems in a Changing World
 Susan C. Cork, David Hall, Karen Liljebjelke, 2016-11-14

One Health refers to an interdisciplinary approach to solving complex problems at the interface of human and animal health and the wider ecosystem. It represents an integrated and collaborative approach and addresses diverse issues such as the detection and management of emerging and re-emerging infectious and non-infectious diseases, food and water security, food hygiene and global trade. Many complex problems that we currently face must consider anthropogenic factors as well as climate change, environmental impact, international collaboration, tourism, the human-animal bond, economics, plant health and myriad other factors. This book discusses complex concepts in One Health such as preparedness, planning, national level governance, inter-agency co-operation, climate change, human activity in sensitive ecosystems, the global food trade and food safety, antimicrobial resistance, surveillance and communication from policy level to practical application. The book uses real world case studies from different geographical regions ranging from Asia to the Arctic, different environments from the jungle to the oceans and different species including bees, fish, domestic and wild animals and humans. The cases are prepared by experts with a diverse range of experience and provide a unique and fascinating on-the-ground approach to One Health topics in practice.

One Health Case Studies is an ideal resource for students and practitioners in veterinary medicine, human medicine, public health, agriculture, wildlife management, ecosystem health and environmental management.

Climate Change and Mental Health Equity Rhonda J. Moore, 2024-07-18

Climate change is a driver of poverty, poor mental health, inequity and increased intersectional vulnerability with significant differential global impacts on individual and community health and well-being. For example, people living in low resource settings in high income countries (HICs) and in low and middle income countries (LMICs) are at greater risk, often experiencing fragile socioeconomic, political and health infrastructures and conflict affected settings (FCAS) that place them at greater risk and vulnerabilities to climate change related mental health impacts. The broad goal of this book is to place a social justice and inclusive lens on climate change and mental health equity, focusing on these three key elements: people, place and community. The book includes perspectives from the global North, the global South and Indigenous

perspectives to help provide greater insight into how we can better understand climate change and mental health equity across peoples place and community This book s three pronged approach will focus on certain trends in this emerging and growing field also bridging some of the more extensive gaps and is a tool for better understanding how mental health disparities might be addressed at this time *Climate Change and Animal Health* Craig Stephen,Colleen Duncan,2022-11-23 This benchmark publication assembles information on the current and anticipated effects of climate change on animal health It empowers educators managers practitioners and researchers by providing evidence experience and opinions on what we need to do to prepare for and cope with the largest threat ever to have faced animals on this planet With expert contributors from across the globe the text equips the reader with information and means to develop sustainable adaptation or mitigation actions After introducing animal health in a climate change context chapters look at specific animal health impacts arising from climate change The book concludes with suggestions on teachable and actionable ideas that could be used to mobilize concepts provided into education or advocacy This book was written amid the COVID 19 pandemic and in the face of ever increasing reports of on the ground real life climate impacts Large scale wildfire and ocean heat waves killed unprecedented numbers of animals while droughts in some areas and floods in others displaced thousands of livestock and made food scarce for even more Climate change is real and it is here How we respond will have profound implications for people biodiversity welfare conservation societies economies and ecosystems Today s veterinary educators are awakening to the need to adapt and train a new generation of animal health professionals who can understand and plan for climate change and this book is an essential resource **Indigenous Health and Well-Being in the COVID-19 Pandemic** Nicholas D.
