and related problems are increasing rapidly and have become a matter of great concern there has not been a unanimous and empirical approach to assess and cure it due to its divergence or other causes This book is based on the most developed construct spiritual intelligence and its effects on mental health and quality of life Spirituality and its other constructs are one of the most interesting topics nowadays in the area of positive indigenous transpersonal psychology and among social behavioral scientists This book provides content on spirituality spiritual intelligence mental health and quality of life The book also attempts to review related literature whether review or empirical to have a look at past and current scenarios on spirituality and mental health and quality of life research Through an exploration of Indian indigenous psychology this book provides a look at mental health and the mind from an Indian psychological perspective and examines Indian psychology taking into consideration modern psychological concepts

Quality of Life in Epilepsy Gus A Baker, Gus A. Baker, Ann Jacoby, 2013-05-13 Though clinical aspects of epilepsy such as seizure control are crucially important to its management increasing attention is being given to wider quality of life issues Epilepsy continues to be an often misunderstood and stigmatising condition for the vast majority of people whose seizures can be well controlled the social and psychological repercussions are often of greater significance than the seizures themselves The increasing emphasis on the importance of non clinical outcomes in the assessment of new treatments and management strategies for chronic conditions such as epilepsy has stimulated interest in methodological issues in assessing quality of life This book reviews the recent literature on the impact of epilepsy on everyday experience and the methodological issues involved in assessing that impact It also considers the perspectives of a range of health professionals involved in caring for people with epilepsy and how through appropriate management the impact on their lives can be minimised

Health-related quality of life after cardiac arrest Johan Israelsson, 2020-02-17 Background Cardiac arrest is a major health problem worldwide For many of the afflicted cardiac arrest is the natural end of life For others it is an unexpected event suddenly striking in the middle of life During the last decades major efforts in treatment have contributed to more people surviving their cardiac arrest However previous research has mainly focused on survival while the knowledge about health related quality of life in survivors is sparse Hence there is a need for more research in order to extend the knowledge about the living situations among survivors and their spouses For example factors associated with health related quality of life are not sufficiently investigated Knowledge about such factors is important in order to develop interventions and to be able to improve post cardiac arrest care In addition existing research shows incongruent results concerning differences in characteristics and survival between men and women In order to provide equitable care between sexes further studies are warranted Aim The overall aim of this thesis was to increase the knowledge of survival and health related quality of life among people suffering cardiac arrest with focus on sex and other related factors The specific aims were to describe in hospital cardiac arrest events with regard to sex and investigate if sex is associated with survival after controlling for known predictors and interaction effects study I to describe

health status and psychological distress among in hospital cardiac arrest survivors in relation to sex study II to investigate factors associated with health related quality of life among cardiac arrest survivors treated with an implantable cardioverter defibrillator in relation to sex and to compare their health related quality of life with a general population study III and to investigate if type D personality and perceived control among cardiac arrest survivors and their spouses were associated with their own and their partners health related quality of life study IV Methods The general design in all studies I IV was quantitative cross sectional and correlational This thesis is based on four different data collections Data was systematically collected using national quality registries I and II or by sending questionnaires to survivors III and IV and their spouses IV treated at several different hospitals in Sweden The sample size varied between 126 and 990 across the studies The outcomes and explanatory study variables were chosen with respect to Wilson and Cleary s conceptual model of health related quality of life The main outcome variables were survival after resuscitation survival at hospital discharge survival at 30 days post cardiac arrest I and health related quality of life measured by the Hospital Anxiety and Depression Scale II and III and the EuroQol 5 dimensions II IV In this thesis descriptive and inferential statistics were applied The main statistics consisted of logistic and linear regression analyses and structural equation modelling Results Male sex was associated with a better chance of survival to hospital discharge but no associations between sex and survival after resuscitation or at 30 days were identified More men than women received resuscitation attempts when suffering an in hospital cardiac arrest study I Health related quality of life among most cardiac arrest survivors was good II IV even when compared to a general population III However a significant proportion reported low health status and symptoms of anxiety and depression II and III Women reported worse health related quality of life compared to men and female sex was associated with poorer health related quality of life in the multiple regression models II and III Several additional factors were identified to be associated with poorer health related quality of life being unemployed having a type D personality perceiving less control suffering from more comorbidities and suffering from more ICD related concerns III In addition older age was associated with poorer EQ VAS or better HADS Anxiety health related quality of life depending of outcome measure II Moreover perceived control and type D personality among the survivors were associated with health related quality of life among their spouses but not vice versa Conclusions Although sex does not appear to be an important predictor for survival the difference between men and women regarding the proportion of resuscitation attempts should be further investigated The majority of survivors and their spouses report good health related quality of life similar to general populations However a substantial proportion suffer from health problems Since women in general report worse health related quality of life compared to men a higher proportion of women may be in need of support Several factors associated with worse health related quality of life were identified and might be used during follow up and rehabilitation For example identifying type D personality might be important when screening patients at risk for health problems Perceiving more control could be targeted by health supportive interventions

for example person centered care Healthcare professionals should make efforts to identify survivors at risk of poor health related quality of life and offer individualized support when needed Characteristics among survivors were associated with health related quality of life in their spouses Including spouses in follow up care is therefore important Wilson and Cleary s conceptual model for health related quality of life appears to be applicable for choosing outcomes in cardiac arrest research and might be helpful when designing interventions to improve post cardiac arrest care *Handbook of Quality of Life in Cancer* Angelos P. Kassianos,2022-03-25 Quality of life is an important outcome when treating a cancer patient Research is vast on the role of quality of life on patients general wellbeing responsiveness to treatment and even mortality On the other hand there are several methodological considerations when planning to measure and assess quality of life in cancer patients This handbook with authorship that is diverse in terms of perspectives countries and fields aims to fill a gap in the available literature and responds to a number of questions in its 26 chapters What is quality of life and health related quality of life and why are they important How is quality of life assessed What are the theoretical and methodological considerations when using quality of life outcomes in cancer research How is quality of life useful in routine clinical care How is quality of life impacting different cancer populations in terms of site of the cancer age gender and context Handbook of Quality of Life in Cancer is a learning and consulting tool that can be used by a diverse audience It is an essential resource for researchers who wish to use quality of life assessment tools in clinical trials or other types of studies clinicians who want to develop their understanding of how they can utilize quality of life and how it is important for the patients they care for and commissioners who wish to see why quality of life may impact population health and health system costs Students in diverse fields of study medicine nursing psychology social work medical sociology population health epidemiology and medical statistics among others also would benefit from using the handbook for their studies and for their continuing professional development

Handbook of Social Indicators and Quality of Life Research Kenneth C. Land,Alex C. Michalos,M. Joseph Sirgy,2011-11-25 The aim of the Handbook of Social Indicators and Quality of Life Research is to create an overview of the field of Quality of Life QOL studies in the early years of the 21st century that can be updated and improved upon as the field evolves and the century unfolds Social indicators are statistical time series used to monitor the social system helping to identify changes and to guide intervention to alter the course of social change Examples include unemployment rates crime rates estimates of life expectancy health status indices school enrollment rates average achievement scores election voting rates and measures of subjective well being such as satisfaction with life as a whole and with specific domains or aspects of life This book provides a review of the historical development of the field including the history of QOL in medicine and mental health as well as the research related to quality of work life QWL programs It discusses several of QOL main concepts happiness positive psychology and subjective wellbeing Relations between spirituality and religiousness and QOL are examined as are the effects of educational attainment on QOL and marketing and the associations with economic growth The

book goes on to investigate methodological approaches and issues that should be considered in measuring and analysing quality of life from a quantitative perspective The final chapters are dedicated to research on elements of QOL in a broad range of countries and populations

Nutrition and Health-Related Quality of Life: Is it an Ignored Outcome? Leila Itani, Marwan El Ghoch, Rosa Sammarco, 2021-12-03

Quality of Life Impairment in Schizophrenia, Mood and Anxiety Disorders A. George Awad, 2007-06-28 Over the past few decades health related quality of life HRQL has emerged as the new image of medicine viewed from a psychosocial perspective The concept of Quality of Life has attracted a good deal of interest not only from a clinical perspective but also from psychosocial health economics as well as cultural aspects More recently the neurobiological brain substrates that modulate many aspects of subjective experiences which is relevant to quality of life such as affect mood cognition pleasure reward responses as well as feeling of wellbeing and satisfaction has been explored and elucidated Such increased interest in HRQL is highlighted by the large number of recent publications Over the past 10 years at least 350 papers were published describing aspects of HRQL in the psychiatric and mental field Among them 78% dealt with HRQL in schizophrenia and schizoaffective disorders 21% with major depression 14% with anxiety disorders and 4% with bipolar disorder It is gratifying to witness the enhanced interest and popularity in HRQL research and publications yet the field continues to suffer from conceptual inconsistencies as well as a good deal of methodological limitations It is worrisome that we still do not have a clear understanding of the concept itself as applied to mental health and illness as well as the complex array of its determinants Similarly there is a lag in the application of quality of life data in improving clinical practice

Integrating Health-Related Quality of Life in Neuro-Oncology Maria Teresa Pedro, Peter Hau, Carolin Weiss Lucas, Christine Jungk, Martina Messing-Jünger, 2025-04-25 Health Related Quality of Life HRQoL in neuro oncological patients is a complex and multifaceted area of study that intersects medicine and health It is influenced by a range of factors including physical emotional and cognitive aspects Despite the growing interest in this field driven by the concept of precision medicine the integration of HRQoL principles into everyday clinical decision making remains a challenge This is particularly true in the context of neuro oncological diseases and other life changing neurological impairments The need for a paradigm shift in clinical practice is evident as the current approach often overlooks the importance of maintaining patients general well being as emphasized in the revised Geneva Declaration of 2017 The primary objective of this research topic is to provide an integrative up to date overview of HRQoL in adult and pediatric patients with neuro oncological diseases This includes diseases affecting both the central and peripheral nervous system The research aims to shed light on the significant impact of diagnosis prognosis and potential toxicity of therapies on patients HRQoL and daily living activities It also seeks to explore the uneven integration of advances in radiation oncology immuno and chemotherapy advanced neuroimaging and neuromodulation into clinical practice The research will focus on the specific challenges of HRQoL in neuro oncological populations which have often been marginalized within the broader context of cancer

Quality of life in Italy Filomena

Maggino, Giampaolo Nuvolati, 2012-06-06 The outcome of the first Italian National Conference on Quality of Life this volume is full of cogent analysis of topics and issues related to well being and quality of life including focused papers on specific population groupings and discrete themes Held in Florence in September 2010 the conference saw the creation of the Italian Association of Quality of Life Studies devised as a forum for this varied field of research with a rapidly expanding profile in the context of the continuing financial crisis The papers address a number of recognized quality of life concerns including public health wealth distribution employment political participation and the perception of crime Contributors deploy innovative methods of analyzing official statistics that result in more complex and multidimensional indicators Some papers provide data on other European nations that allow for comparative assessment while others set out fresh approaches to evaluating quality of life itself Highly relevant not just to academics but to policy makers and practitioners in a range of sectors this publication explores important aspects of a crucial contemporary subject

Quality-of-Life Research in Chinese, Western and Global Contexts Daniel T.L. Shek, Ying Keung Chan, Paul S.N. Lee, 2005-09-26 The majority of studies on the quality of life have been conducted in Western contexts and are based on Western participants Comparatively speaking there are only a few studies that have been conducted in different Chinese contexts Also there are fewer QOL studies based on children and adolescents or studies that examine the relationship between QOL and economic disadvantage In addition more research is needed to address the methodological issues related to the assessment of quality of life This volume is a constructive response to the challenges described above It is the first book to cover research in Chinese Western and global contexts in a single volume It is a ground breaking volume in which Chinese studies on the quality of life are collected The book includes papers addressing family QOL quality of life in adolescents experiencing economic disadvantage and methodological issues in the assessment of QOL It is written by researchers working in a variety of disciplines

The Conceptual frameworks on Quality of Life Dr. Kasturi Shukla, 2022-01-18 Anything that has to do with people anywhere across the globe has surely something to do with their Quality of Life The concept has been discussed and finds reference right from ancient literature dating back to early Greek philosophers like Socrates 469 399 BC his student Plato 427 428 348 347 BC and Aristotle 384 322 BC and stays on the radar of researchers and policy makers until today Aristotle had written about the nature of happiness and what people require in order to have a good life The concept of QoL still holds a strong place in psychological studies social research as well as policy making because the various national and international bodies like World Health Organization United Nations and many others have a strong focus on improving the QoL of the people The book is a comprehensive compilation of the large number of definitions of QoL multiple underlying theories various concepts derivative models how QoL is essentially linked with the UN s SDGs and the crucial global rankings used for international comparative analysis of QoL As the world is changing fast while recovering from the Covid 19 pandemic there are many changing trends that have an integral role in QoL assessments The book attempts to cover almost all of this in lucid and

comprehensible language **Quality of Life and Living Standards Analysis** Sergey Artemyevich Aivazian,2016-01-15 This book is about the concept of Quality of Life What is necessary for quality of life and how can it be measured The approach is a multicriterial scheme reduction which prevents as much information loss as possible when shifting from the set of partial criteria to their convolution This book is written for researchers analysts and graduate and postgraduate students of mathematics and economics **Analyses on Health Status and Care Needs among Older Adults** Jian Sun,Hongye Luo, Yi Zeng,2025-09-12 Globally a shift in population structures and disease spectrum is inevitable The latest global burden of disease study revealed that the average healthy life expectancy has steadily increased from 1990 to 2019 worldwide However there is a concerning trend in which the growth in healthy life expectancy is lower than the growth in life expectancy in 198 out of 204 countries evaluated This implies that people spend more time in sub optimal health despite living longer Moreover non communicable diseases contribute an increasingly significant portion of the disease burden in low and middle income countries growing from one third to almost two thirds from 1990 to 2019 This mainly results from preventable risk factors It is important to approach aging with a positive outlook This entails guaranteeing sufficient medical care and proactively managing health issues in older adults Importantly since several diseases are often irreversible prevention is key Social and psychological factors due to their nebulous harm have struggled to gain attention over a long period We should aim to make the additional years gained during old age as healthful as those in other life stages

Handbook of Quality of Life Research Robert W. Marans,Robert J. Stimson,Noah J. Webster,2024-03-14 This erudite Handbook demonstrates how multiple approaches have been used to conceptualize measure and model the complex issue of quality of life QOL and individual well being emphasizing place and space as critical factors in a meaningful QOL experience among diverse populations including special attention given to older adults **Assessment of Rehabilitative and Quality of Life Issues in Litigation** Patricia Murphy,John M. Williams,1998-08-26 Written in response to the Supreme Court s landmark Daubert decision regarding provision of expert witness scientific testimony Assessment of Rehabilitative and Quality of Life Issues in Litigation focuses on quality of life as a means of conceptualizing and measuring pain and suffering in the controversial enjoyment of life debate The authors make a compelling argument for a quality of life paradigm based on a rehabilitation and health economics analysis demonstrating that qualified rehabilitationists are the best experts to provide analyses of the impact of disability or injury on quality of life over the lifespan The extensive literature review enables attorneys and litigation experts to easily access quality of life literature Principles and Practice of Geriatric Psychiatry Mohammed T.
