Health And Health Care In Later Life:

The Legacy of Longevity Sidney M. Stahl, 1990-10 Published in Cooperation with the Midwest Council for Social Research on Aging Improved standards of living coupled with advancements in medical technology have enhanced much of the populations opportunities for living long and productive lives But what are the implications for living longer Is living longer necessarily the best thing for the individual And what about the quality of that life In this insightful volume leading figures in social gerontology present state of the art research on health and longevity They discuss such consequential topics as health promotion and disease prevention supply and demand for social and medical services governmental and community response to needs and effects of gender and ethnicity on health and life circumstances In addition they provide a sound basis for understanding the theoretical questions and empirical findings of a growing and multifaceted field The Legacy of Longevity is an excellent resource for anyone wishing to understand the health and social implications of an aging population Administrators and policymakers will find its practical information useful in planning and implementing programs to improve the health and social well being of older persons Address es a variety of topics pertinent to the health care of older adults including conceptualizing and measuring health social factors associated with becoming sick use of health care services organization and financing of health care services and the interaction of the system with the individual Recommended for upper level undergraduate and graduate students Choice This book provides intelligent discussion of the important issues in health care and health policy for elderly people today The authors expertise in setting out their arguments clearly is obvious and the outcome is an inspired presentation of what could appear to be a dull topic It should become a key text for the specialist readers Journal of Advanced Nursing Purely as a work of reference the book is very useful But it is more than that There is no shortage of fresh insights or of controversial positions the authors on the whole do not get bogged down in the minutiae of their findings or the findings of others but set them in context and discuss them with concern and enthusiasm The editor is to be congratulated on the way in which he has assembled and balanced the various contributions successfully weathering the perils of overlap and repetition Ageing in Society The Legacy of Longevity is a multiauthor collaborative effort full of information bound to be of interest to serious students educators and practitioners in the fields of aging It provides a comprehensive overview of state of the art research on health and longevity as these relate to social issues Pride Institute of Long Term Home Health Care

Health and Health Care in Later Life Christina R. Victor, 1991 One of the most potent images of later life is the general association between age and ill health The stereotype of later life is that it is characterized by universal and inevitable ill health The ageing of the population is therefore regarded as problematic because of the high consumption of health and social care by older people These two issues the health status of older people and the provision of health and social care are addressed in this volume The first section of the book presents an overview of the physical and mental health in later life It also addresses the health beliefs and behaviour of older people The second

section of the book describes current patterns of health and social care utilization by older people and concludes with a discussion of how these may be affected by recent policy changes in Britain *Health and Health Care Utilization in Later Life* Jon Hendricks, 2019-04-04 The debate over national health insurance has renewed attention on the health and health care utilization of the elderly Few questions have been more poignant than the health of the United States elderly As a broad ranging critical look *Health and Health Care Utilization in Later Life* brings the central questions facing the elderly into bold relief It spans the range of health concerns the elderly face daily The debates over health care rage often without having the relevant facts *Health and Health Care Utilization in Later Life* brings the facts to the fore but just as importantly it brings a sensitive feeling for the realities of health as a driving force in the daily lives of old people Recent Advances in Digital System Diagnosis and Management of Healthcare Kamran Sartipi, Thierry Edoh, 2021-02-03 Technologically supported healthcare management is beginning to take center stage as advances occur in many aspects of healthcare involving big data artificial intelligence and improved user interfaces This volume provides a perspective on a number of such advances ranging from homecare with remote network support and primary homecare to telemedicine application for pediatric cardiology A special section with chapters on Clinical Decision Support Systems CDSS addresses topics in improved human interfaces intelligent support for better quality home and institutional care effective big data visualization for decision makers and gathering data from multiple sources to support the battle against resistant bacteria *Age as an Equality Issue* Sandra Fredman, Sarah Spencer, 2003-07 Until recently age discrimination attracted little social opprobrium However ageism has now been thrust onto the equality agenda by the spectre of an ageing population This has led to a range of policies on active ageing Most importantly legally binding legislation prohibiting age discrimination in employment will need to be in place by 2006 Remarkably little attention has been paid to the key issues To what extent is age inevitably linked with declining capacity What are the central aims of a policy on age equality and how can these be realised in law How should law and policy address age discrimination in health education and employment What lessons can be learned from the US and Europe And should young people be dealt with in the same way as older people This book answers these questions in a series of chapters by experts from a wide range of disciplines It begins by examining the nature of the ageing process and then turns to a detailed analysis of the concept of age equality In the light of this analysis the following three chapters critically assess employment education and health A separate chapter is devoted to discrimination against children The last two chapters consider the experience in the US and other European countries *The Patient as Agent of Health and Health Care* Mark Sullivan, MD, PhD, 2016-12-15 Proposals for patient centered care for chronic illness have not understood or incorporated the capacity of patients to be active agents of health and health care Patients can not only make treatment choices but help define their clinical problem and its resolution This book examines patient action as the principal path to health and an essential component of it Research Methods in Health: Investigating Health and Health Services Ann Bowling, 2023-03-15

Quality of sexual and reproductive health care: strengths, gaps, and challenges for midwifery care Ramon Escuriet, Lorena Binfa, Loreto Pantoja, 2025-02-18 Poor quality of sexual and reproductive care SRC persists despite countries commitments to international conferences The challenges posed by the COVID 19 pandemic reversed trends in maternal and neonatal mortality and contraception rates increasing unmet family planning needs and gender based violence Evidence shows that midwifery care has made an essential contribution to the development of high quality services in

maternal and childcare The introduction of midwifery professionals trained according to international standards and integrated into the health system can provide around 90% of primary health care for women and newborns including family planning These skilled professionals can save lives and improve the health and well being of women and newborn infants at a scale unmatched by other health interventions Evidence identified 56 outcomes improved by the full scope of midwifery The weight of sexual and reproductive health on general health and wellbeing has a greater impact on women particularly those that are neglected to receive high quality SRC Providing high quality SRC demands more humanized and integrated efficient and effective services with a greater emphasis on quality both from a technical perspective and from the user experience Despite all the efforts the quality of SRC is still a challenge globally research is needed to identify best practices addressing quality care tailored to individuals implementation of models of care that enhance both well being and safety optimization of physiological processes during childbirth as well as validation of outcomes measures
