

# ECOLOGICAL PERSPECTIVE

The ecological perspective is a theoretical and practical approach to the social sciences that emphasizes the interactions between an individual and their environment.

## DEFINITION

This perspective emphasizes that individuals develop within and are influenced by complex systems of social, cultural, and physical environments. According to Satchell et al. (2021), "...an ecological approach is about the understanding of individual's perceived behavioral opportunities and gives important focus on what the environment might offer an individual in a place" (p. 1).

## EXAMPLE

The impact of 'nurture' in child development: A child's upbringing is greatly influenced by their immediate family and caretakers, which can include parenting style, availability of resources, and other family dynamics. Additionally, community resources and social support structures, as well as cultural values and traditions, significantly impact a person's development.

These target populations include youth with serious behavioral and emotional disturbances and adults with severe and persistent mental illnesses. The innovative approaches reviewed include diverse treatment methods for differing clinical populations. These varied approaches have several common elements: Social ecological theory frameworks; An emphasis on delivering flexible, comprehensive, pragmatic, and goal oriented interventions in persons' natural environments; Increased accountability on the part of service providers. The transition from centralized to community based care is discussed, and normalizing a patient's daily routine as an important factor in the success of state of the art community support programs is emphasized. *Innovative Approaches for Difficult to Treat Populations* offers mental health professionals and students a firsthand look at the future direction of clinical services. Policy issues necessary to developing and disseminating progressive treatments are addressed, including the downsizing of state psychiatric hospitals, strategies for reforming state mental hospital systems, and ethical issues in research on child and adolescent mental disorders.
