Understanding Purpose Philippe Huneman, 2007 A collection of essays investigating key historical and scientific questions relating to the concept of natural purpose in Kant's philosophy of biology Understanding Purpose is an exploration of the central concept of natural purpose Naturzweck in Kant's philosophy of biology Kant's work in this area is marked by a strong teleological concern living organisms in his view are qualitatively different from mechanistic devices and as a result they cannot be understood by means of the same principles At the same time Kant's own use of the concept of purpose does not presuppose any theological commitments and is merely regulative that is it is employed as a heuristic device The contributors to this volume also investigate the following key historical questions relating to Kant's philosophy of biology How does it relate to European work in the life sciences that was done before Kant arrived on the scene How did Kant's unique approach to the philosophy of biology in turn influence later work in this area The issues explored in this volume are as pertinent to the history of philosophy as they are to the history of science it is precisely the blurred boundaries between these two disciplines that allows for new perspectives on Kantianism and early nineteenth century German biology to emerge Contributors Jean Claude Dupont Mark Fisher Philippe Huneman Robert J Richards Phillip R Sloan Stéphane Schmitt and John Zammito Philippe Huneman is researcher at the Centre National de la Recherche Scientifique Unit of the Université Paris

The Natural City Stephen B. Scharper, Ingrid Leman-Stefanovic, 2012-01-01 Urban and natural environments are often viewed as entirely separate entities human settlements as the domain of architects and planners and natural areas as untouched wilderness This dichotomy continues to drive decision making in subtle ways but with the mounting pressures of global climate change and declining biodiversity it is no longer viable New technologies are promising to provide renewable energy sources and greener designs but real change will require a deeper shift in values attitudes and perceptions A timely and important collection The Natural City explores how to integrate the natural environment into healthy urban centres from philosophical religious socio political and planning perspectives Recognizing the need to better link the humanities with public policy The Natural City offers unique insights for the development of an alternative vision of urban life

The Metamorphosis of Plants Johann Wolfgang von Goethe, 2009-09-11 Goethe's influential text newly illustrated with stunning color photographs. The *Metamorphosis of Plants*, published in 1790, was Goethe's first major attempt to describe what he called in a letter to a friend "the truth about the how of the organism." Inspired by the diversity of flora he found on a journey to Italy, Goethe sought a unity of form in diverse structures. He came to see in the leaf the germ of a plant's metamorphosis, the true Proteus who can hide or reveal himself in all vegetal forms, from the root and stem leaves to the calyx and corolla to pistil and stamens. With this short book, 123 numbered paragraphs in the manner of the great botanist Linnaeus, Goethe aimed to tell the story of botanical forms in process to present in effect a motion picture of the metamorphosis of plants. This MIT Press edition of *The Metamorphosis of Plants* illustrates Goethe's text in an English translation by Douglas Miller with a series of stunning and starkly beautiful color photographs as well as numerous line drawings. It is the most completely and colorfully illustrated edition of Goethe's book ever published. It demonstrates vividly Goethe's ideas of transformation and interdependence as well as the systematic use of imagination in scientific research, which influenced thinkers ranging from Darwin to Thoreau and has much to teach us today about our relationship with nature.

World Views and Scientific Discipline Formation W.R. Woodward, Robert S. Cohen, 1991-10-31 The various efforts to develop a Marxist philosophy of science in the one-time socialist countries were casualties of the Cold War. Even those who were in no way Marxists and those who were undogmatic in their Marxisms now confront a new world. All the more harsh is it for those who worked within the framework imposed upon professional philosophy by the official ideology. Here in this book we are concerned with some 31 colleagues from the late German Democratic Republic representative in their scholarship of the achievements of a curiously creative while dismayingly repressive period. The literature published in the GDR was blossoming certainly in the final decade but it developed within a totalitarian regime where personal careers either advanced or faltered through the private protection or denunciation of mentors. We will never know how many good minds did not enter the field of philosophy in the first place due to their prudent judgments that there was a virtual requirement that the candidate join the Socialist Unity i.e. Communist Party. Among those who started careers and were sidetracked, the record is now beginning to be revealed and for the rest, the price of doing philosophy was mostly silence in the face of harassments, the likes of which make academic politics in the West seem child's play.

The Rhinoceros and the Megatherium Juan Pimentel, 2017-01-09 How did Europeans three centuries apart respond to two mysterious beasts, a living rhinoceros previously known only from ancient texts and a nameless monster's massive bones? Juan Pimentel shows that their reactions reflect deep cultural changes but also the enduring power of image and imagination to shape our understanding of the natural world.

Science and Ultimate Reality John D. Barrow, P. C. W. Davies, Charles L. Harper, 2004 Publisher Description

The Art of Discovery Margareth Hagen, Randi Koppen, Margery Vibe Skagen, 2010-08-30 This anthology brings together scholars from literature, the natural sciences, and the philosophy of

science to present new perspectives on the relations between literary and scientific communities Drawing on literature spanning the 19th and 20th centuries as well as Europe and the Americas the authors explore how science has been portrayed from the perspective of literature at different times and in different places as challenge or opportunity promise or scandal The disturbance of science emanates perhaps from its association with a frightening future or its ability to change the appearance of the past the scandal occurs as it recalls us to thresholds and hybrids human and non human animal and machine Science however also emerges as a source of metaphor and imaginative modelling of encodings and decodings representations and discoveries Less prominent in the collection though no less important is the view on how scientific cultures portray literature or the literary academic and how science reflects on itself
